

# Engine Air Filtration

for Light, Medium &  
Heavy Dust Conditions

Air Cleaners • Pre-cleaners & Inlet Hoods • Rubber Adapters/Elbows • Filter Indicators • Mounting Bands

No matter the dust conditions or engine airflow requirements, you will find a Donaldson air cleaner or intake system accessory that will deliver clean air when your engine needs it most!

Distributed by:

# How to Read Air Cleaner Performance Curves

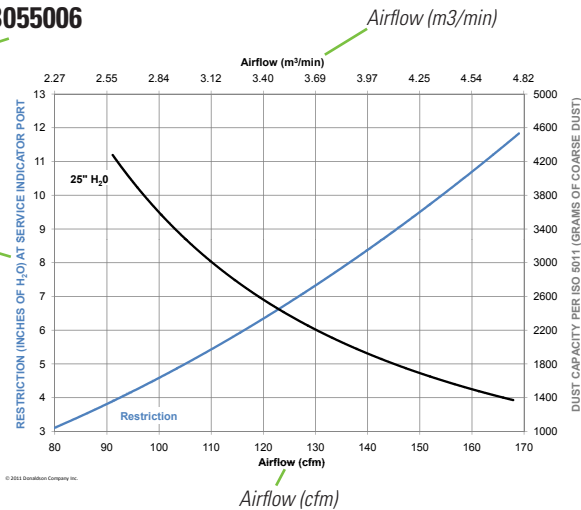

## Performance Curve Explanation & Conversions

**B055006**

*Air Cleaner Model Number*  
More than one model may be on a chart. Notations will be added for models with safety or for scavenge systems.

*Restriction (inches of H<sub>2</sub>O) at Tap.*  
Tap is the restriction indicator tap located on the air cleaner outlet.

*Convert inches of H<sub>2</sub>O to . . .*  
inches of Hg — Multiply by 0.076  
mm of Hg — Multiply by 1.8682  
Kg/m<sup>2</sup> — Multiply by 25.3985  
millibars — Multiply by 2.4907

*Dust Capacity per ISO 5011 (grams of Coarse Dust)*

*Coarse Dust = 1g/m<sup>3</sup> dust concentration*

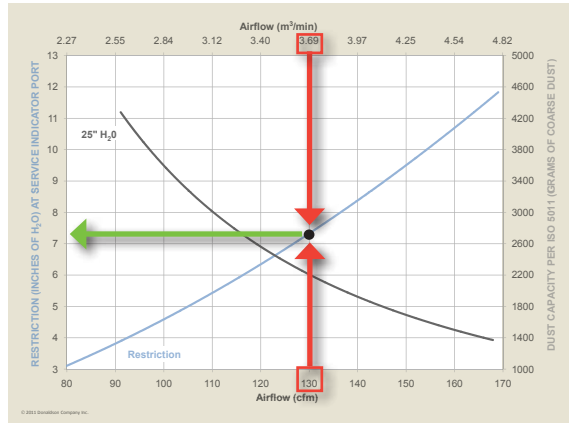

*Airflow conversion calculations*

*1 Cubic Foot per Minute (cfm) = 0.0283 Cubic Meters per Minute (m<sup>3</sup>/min)*

*1 Cubic Meters per Minute (m<sup>3</sup>/min) = 35.315 Cubic Foot per Minute (cfm)*

## To determine the Restriction of an air cleaner . . .

- 1) Find the desired airflow in either cfm or m<sup>3</sup>/min on the horizontal axis. (Red Arrows cfm = cubic feet per minute (cfm) m<sup>3</sup>/min = cubic meters per minute)
- 2) Find the clean air cleaner restriction level (in inches of H<sub>2</sub>O) on the vertical left hand axis that intersects with the airflow level on the blue restriction curve. (Green Arrow)

## To determine the Dust Capacity of an air cleaner . . .

- 1) Find the desired airflow in either cfm or m<sup>3</sup>/min on the horizontal axis. (Red arrows) cfm = cubic feet per minute (cfm) m<sup>3</sup>/min = cubic meters per minute)
- 2) Follow the point on the H<sub>2</sub>O black curve to the right hand axis in the chart. The axis intersect point is the "Dust Capacity" in grams at the stated H<sub>2</sub>O restriction. (Orange Arrow)

This publication contains a wide selection of standard, in-stock air cleaner models for both original equipment manufacturers and replacement parts vehicles, and equipment that operate in light to heavy dust conditions. For a variation or a custom designed intake system, please call your current supplier of Donaldson products.

# Industry Shaping Technology

## Air Filtration Trends and Evolution

### Air Filtration System Trends – Smaller Air Cleaner Systems

Over the past decade numerous emission standards and engineering achievements have come together to create advanced, clean, and flexible engines. These diesel engines and the vehicles they power are requiring smaller air cleaner system package sizes, increased contaminant loading performance, improved contaminant separation efficiency, and higher temperature performance; all the while maintaining low initial restriction to airflow. Emissions compliant engines, extended oil drains and oils, and tighter component tolerances all contribute to the need for increased air filtration system performance.

### Donaldson Delivers!

### PowerCore® Filtration Technology – Big Performance, Small Footprint

Pleated filter designs have given way to PowerCore® Filtration Technology and now, to PowerCore® G2, the next generation. The need for shrinking intake system size will continue as emissions regulations continue and manufacturers design smaller, lighter, and more efficient vehicles.

PowerCore® G2 Filtration Technology delivers longer life and/or less restriction in less space than our original PowerCore design.

- System design flexibility
- Metal-free, lightweight materials
- Rugged construction
- Straight-through airflow technology invented by Donaldson
- Advanced sealing technology
- Superior filtration performance

*For given filter life and efficiency targets, PowerCore® G2 configurations can result in a 30% reduction in size from the first generation of PowerCore filters and a 60% reduction in size from pleated, cylindrical filters.*

### PowerCore® Evolution

*More than 11,000,000  
PowerCore® Filters Sold*

### Sealing Technology Guarantees a Reliable, Sure Fit

Donaldson pioneered the RadialSeal™ design for air filtration more than 20 years ago, creating a superior seal and vibration-resistant interface between the air cleaner and filter. This industry changing sealing technology combines two components into one — the end cap and sealing gasket. The flexible sealing material creates a sure-fit and simplifies filter maintenance. The reliable seal helps protect engines in extreme operating conditions and in challenging heavy-duty applications.

Close-up of RadialSeal endcap and gasket.

Donaldson air cleaners, including PowerCore systems, use an advanced RadialSeal sealing technology. The combination of RadialSeal and PowerCore Technologies offer you best-in-class air intake system solutions for you and your customers.

### Pre-cleaning for Extreme Dust Conditions

Close-up of pre-cleaner section of a PowerCore® air cleaner. Pre-cleaning tubes can be arranged in various patterns, depending on the space and efficiency requirements of your application.

Pre-cleaners expel dust and debris before it reaches your air cleaner — extending air cleaner life, extending maintenance intervals, boosting air intake system efficiency and extending engine life.

Donaldson inertial particle separation technology offers maintenance-free air filtration for turbines, diesel engines and environmental applications. Inertial separation technology is used extensively on ground vehicles, rotorcraft, off-road vehicles and other critical equipment exposed to harsh environments.

Our light-weight pre-cleaning tubes have no moving parts to wear out or break. They are self-cleaning and do not require regular maintenance.

See the Accessories Section for our pre-cleaner / rain hood product offering.

Strata™ Tubes offer low airflow restriction with efficient contaminant removal up to 99%.

### On- & Off-Road Air Filtration Evolution

FRG RadialSeal™ Plastic / Metal Air Cleaner

PSD PowerCore® Plastic Air Cleaner with non-metal filters

## Unique Filtration Solutions

### Crankcase Filtration – An Emissions Device or Air Filter?

Actually, it's both. Donaldson Spiracle™ Systems filter contaminant and aerosols from blow-by gasses.

For engine manufacturers, regulators now recognize that engine blow-by gas emitted from the crankcase is a major emissions source and requires that the vent be closed or filtered with high efficiency filtration.

Our Spiracle™ Crankcase Filtration Systems for closed (CCV) or open (OCV) ventilation systems reduce or eliminate harmful and unwanted crankcase emissions.

Small, small extended and mid-sized standard models are available for engine blow-by flow ranges up to 300 lpm / 10.6 cfm and with blow-by mass flow rates up to 15 gms/hr.

For more on Spiracle™ crankcase filtration technology, refer to the technical reference section.

### What's the Right Intake System?

As you develop the future design of your engine or application, it is important to consider the filtration system. Depending on your objectives, it may be beneficial to choose from a catalog offering or partner with Donaldson for a filtration solution tailored to your needs.

#### Reasons to Select a Traditional System

- No or low budget for engineering collaboration, development time or cost, or component tooling
- Prefer to have parts readily available — want to avoid manufacturing lead times (8 – 12 weeks) and not interested in warehousing service parts
- Prefer an established brand for filtration

#### Reasons to Consider a Custom, Integrated System

- Engine design team is integrating new components that require a higher degree of filtration
- Looking for a system that does more, which may include pre-cleaning, sensors, unique intake plenums
- Have budget for engineering collaboration, development time/cost
- Interest in component / supplier consolidation — solutions that bridge a wide range of engine/vehicles.
- Offering a unique solution with ease of maintenance

### Molded Plastic Intake Systems

# Filtration Solutions

## Global Capabilities — Design & Logistics

Donaldson has accumulated numerous engineering, design, and testing tools that are used during the design process.

### Engineering Capabilities

- Design centers in three key regions — United States, Asia and Europe

#### Prediction and Simulation

- CAD
- Proprietary, internally developed filter modeling software
- Fundamental fluid mechanics
- Computational fluid dynamic methods
- Structural analysis
- Thermal analysis

### Development and Validation

#### Analytical Evaluation

- Particle Characterization
- Chemical Analysis Laboratory
- Acoustic Analysis

#### Filter Durability

- Filtration performance testing per applicable SAE and ISO standards
- Fabrication integrity
- Environmental conditions
  - Salt spray and thermal cycling
- Pressure fatigue
- Flow fatigue
- Hydrostatic burst
- Flow benches
- Vibration benches
- Gravimetric analysis

#### Rapid Prototyping

- SLA, SLS
- Investment casting
- RTV molding

### Test & Evaluation Tools

#### Structural Analysis

- Per SAE, ISO, and NFPA standards
- Ansys & Abaqus
- Collapse
- Pressure impulse and fatigue

#### Tensile Compression

- Used to test material, component and assembly properties

#### Environmental Chambers

- Allows testing at hot or cold temperature, with humidity control

#### Flow Test Benches

- Allows measurement of static and dynamic flow and restriction for a device
- Allows calculation of device restriction at varying flows and temperatures
- System simulation

#### Performance Testing

- ISO, SAE, NFPA
- Filter performance
- Efficiency testing
  - Gravimetric
  - Fractional
  - Capacity testing per ISO5011
- Customer standards
- Crankcase ventilation tests
- Soot loading bench
- MAFS Test Bench
- Acoustic Test Chambers

### Design Validation

#### Diesel Engine Test Cells

- Test cell locations in three key regions — United States, Asia and Europe
- Up to 600 kW / 800 hp capability
- Measurement of gaseous and particulate emissions
- Component durability
- Soot test bench
- 24/7 durability testing
- Web-based test cell monitoring access
- Tensile/Compression Tester
- Temperature Chambers

#### Vibration/Shaker

- Multiple benches
- Performance vibration with flow test
- Can apply sine, random, shock or custom variable vibration profiles
- Capable of hot or cold tests

#### Field Testing

- On and off highway
- Heavy-duty
- Tests conducted on both end user and OEM vehicles

#### Field Data Acquisition

- Real time measurements
- Remote communications
- On-line collection tools
- Review daily, weekly and monthly reports to analyze operational trends

### Filter Media

- Wide selection
- Media characterization testing
- In-house media capabilities

*Donaldson European Technical Center. Expanded testing capabilities for engine filtration businesses in October, 2010.*

# Standard Models with Donaldson Technology

## Newer designs offer improved features and performance!

XRB Housings: left XRB12; middle XRB10; and right XRB08

### XRB Air Cleaners

The XRB family is ideal for light- to medium-duty diesel engine trucks, agriculture, construction, mining, and industrial engine applications. The XRB air cleaner is smaller, lighter and easier to install and it effectively reduces contaminants, providing a high level of engine protection. Available in three diameter sizes.

FKB Housings and Filters: top center, FKB06; bottom left, FKB05; and bottom right, FKB04

For smaller sizes, check out the FKB air cleaner family.

PSD08, PSD09, PSD10 and PSD12 housings

### PSD PowerCore® Air Cleaners

Air cleaners with PowerCore filtration technology offer maximum design flexibility. You gain equal performance in significantly less space, freedom to design unique configurations to fit tight spots, and overall design simplicity. See the PowerCore air cleaner section for all the details.

The smallest of our PSD family, this D080056 Side Service model is designed for in airflow ranges of 180-245 cfm, see the PowerCore section for more details.

**PowerCore**  
A Donaldson Filtration Technology

### PowerCore Air Cleaner Scavenge System Components

This catalog features new Exhaust Ejectors, Check Valves, and Adapters that work with the PSD Air Cleaner family. To learn more, see the PowerCore Air Cleaner section.

## Newer Filtration Technology for Mining Trucks Enhancements offer improved features and performance!

SSG

### SSG Style — Our Largest Engine Air Cleaner

The SSG Air Cleaner offers design improvements over our older SRG air cleaner style — including filters with RadialSeal™ sealing technology, and a filter access cover with a quick release cover latches and chain.

No more bolt to unscrew for a filter change — simply unlatch the cover and let it hang from the housing during service.

### Upgrade to newer filtration technology . . . with our Conversion Kit

Replacing an older SRG housing with the new SSG housing allows you to simplify your routine filter service — no more separate gaskets at each filter change or removing a bolted on cover. SSG filters have radial seal end caps that provide a more reliable, consistent seal.

Conversion kit includes all you need to replace the upper unit of an old SRG air cleaner, including the filters.

Choose from an upper assembly conversion kit or you may want to install a complete new housing if your current SRG assembly needs repair or is reaching the end of its useful life.

SRG Housing

SSG Housing

Dust Dumpa kits allow for visual inspection related to dust-cup servicing and Vacuator™ Valve purging. See page 9 or the accessories section.

## Donaldson Endurance™ Air Filters with Ultra-Web® Advanced Nanofiber Filtration Technology

**Donaldson**  
**Endurance**

### ULTRA-WEB® Advanced Nanofiber Filtration Technology

- Invented by Donaldson
- Engineered to perform in extreme temperature and humidity conditions, unlike ordinary nanofibers
- Optimized fiber structure and fiber diameter so it's stronger and lasts longer in all environmental conditions
- High efficiency — longer filter life
- High capacity — holds more contaminant
- Identifiable by the blue media color
- Proven — used in diesel engine market for nearly two decades

### Finding a Donaldson Endurance air filter in this catalog

Part numbers starting with EAF are Donaldson Endurance Air Filters. EAF part numbers, if available for an air cleaner model, are listed in the service parts listing with an ES (Extended Service) in the description.

A150138	ERA

## Intake System Accessories

Pre-Cleaners • Hoods • Indicators • Elbows • Connectors • Mounting Bands

**Designed to solve your customer's specific problems — such as excessive moisture or noise — or to simply help maintain the overall system**

- Inlet Hoods — protect air intake from large debris and rain
- Pre-cleaners — extend air filter life and boost system efficiency
- Filter Gauges and Indicators — maximize filter life and reduce maintenance costs
- Rubber Elbows and Connectors — minimize air intake flow resistance, reduce noise levels in severe operating condition
- Vacuator™ Valves — automatically dispel dust and water from the air cleaner

### New Pre-cleaning Device for Heavy-Dust Conditions!

Donaldson air cleaners for heavy-dust conditions have pre-cleaning inertial separation technology built-in to the inlet side of the housing — you'll find this technology in our industry shaping PSD, STB, STG, SRG and SSG air cleaner models.

Finally, the same durable, reliable, particle separation technology is now available in a stand-alone pre-cleaner — the Strata™ Cap!

**Strata™ Cap —  
Our Highest Rated  
Pre-cleaner Ever  
Invented!**

The Strata™ Cap pre-cleaner expels up to 96% of dust and debris BEFORE it ever reaches the air cleaner.

*Donaldson developed the first air particle separator system in the early 1960s to protect helicopter turbine engines from sand ingestion. Today, this technology continues to be used on defense equipment and other turbine and diesel engine applications that operate in extreme dust conditions.*

## Intake System Accessories

Pre-Cleaners • Hoods • Indicators • Elbows • Connectors • Mounting Bands

### Dust Dumpa for PowerCore®, SRG, and SSG Style Air Cleaners

In extreme dust conditions (mining, construction and quarrying), the dust is so concentrated that maintenance personnel have to empty the dust cups or check the Vacuator™ Valves more frequently than they like.

Both Dust Dumpa kits incorporate rubber connections that improve dust evacuation from the housing during normal vehicle vibration. The clear tube allows you to easily see what's happening during daily inspections without climbing up to open or check out the Vacuator Valve.

The addition of Dust Dumpa tube extensions to this double PSD air cleaner application resulted in extended filter life on this Australian geothermal drill rig.

Dust Dumpa tube extensions ship fully assembled. **Left:** Part No. X006561 and Part No. X006562 on right.

## Air Cleaner Materials, Finishes & Construction Designed for long life, rust resistance and good looks!

### Injection and Blow-Molded Air Cleaners

Our non-metal finish is always black plastic and can be found on DuraLite™, PowerCore® (PSD) and other RadialSeal™ air cleaners (FPG, XRB, FKB). Advantages include:

- Lighter weight than metal air cleaners
- Corrosion and chemical resistant
- Impact, mar and vibration resistant

Injection and Blow-Molded Air Cleaners

### Polymer Coating Resists Corrosion

Donaldson's gloss black finish — on most of our metal air cleaners (ERA, FVG, FRG) — is resistant to chemicals and corrosion. Advantages include:

- Corrosion and chemical resistance. This polymer coating lasts five to 10 times longer than traditional paint.
- Impact and mar resistance. Polymer coating is up to 17 times harder than most solvent-based paint.
- Consistent thickness coating over the entire air cleaner, even in crevices and small, hard-to-reach places.

Polymer Coating

### Buff Prime Finish (not shown)

Our large SRG, SSG & STG air cleaners have a buff prime finish — ready for you to apply paint to match the overall look of your equipment. (Exception: the SRG to SSG conversion kit contains an upper unit that has a white polymer coating.)

# Filter Features

Seals • Media • End Caps • Beading • Liners

**Donaldson brand performance air filters give you consistent performance over the life of your engine**

**RadialSeal™ filter seals**

RadialSeal filters slip easily on and off the outlet tube during installation and service. This design eliminates the separate gaskets used with metal endcap filters.

**Axial filter seals**

Strong, pliable gasket ensures a leak-free seal when properly installed. The gasket won't harden or deteriorate over the useful life of the filter.

**Pleatloc™ media spacing**

Ensures uniform pleat spacing, keeps filter media from bunching during operation and promotes longer filter service life.

**Filter end caps**

Designed to protect the filter media and provide structural integrity.

**Beading**

Applied to filter liners, beading is designed to stabilize the media and prevent pleat tip wear.

**Heavy-duty liners**

Corrosion resistant, coated steel liners support the filter media during operation and maximize airflow.

**RadialSeal™ filter seals**

Our RadialSeal technology on PowerCore filters provides a tight critical seal on unique filter shapes.

**Non-metal construction**

Weights less and with less disposal impact.

**PowerCore**  
A Donaldson Filtration Technology

To learn more about the PowerCore advantages, see the PowerCore® Section.

# Donaldson's Commitment to Quality & Continuous Improvement

## Donaldson Quality Commitment

Our employees are committed to providing our Customers with products and services that consistently meet or exceed their expectations.

### We will work toward:

- Continuous improvement of products, processes, and services for the benefit of our Customers;
- Complete Customer satisfaction;
- Elimination of waste and variation;
- World-class standards and benchmarks.

### We believe in:

- The development and empowerment of our people;
- Standardization of processes and measurement of progress;
- Simplicity, visibility and capability of all activities;
- Continuous improvement in our management and quality systems.

For the long-term success of our company, our first operating priority is the satisfaction of our Customers. Understanding their needs and serving them will benefit both our shareholders and our employees. Our management is responsible for ensuring that this policy is understood, implemented and maintained at all levels of our organization.

*Bill Cook*  
Chairman, President, CEO

# Air Cleaner Selection

With the multitude of sizes and styles of air cleaners available from Donaldson, how do you choose the proper model that will reliably protect your engine and deliver maximum filter service life? Selection is based on two primary factors — airflow requirements of your engine and the environment the air cleaner will be operating in. Use our five-step selection method on the next few pages to make the right choice for your application:

## 1 Determine the combustion air requirements of the engine

For the most accurate engine airflow specifications, Donaldson recommends using the intake airflow rate specified by the engine manufacturer. If this information is not readily available, you can calculate your own numbers by using the preferred or alternative methods shown below. If the air cleaner may see excessive engine vibration, include a pulsation factor into your calculations.

### Ideal Method Obtain from Engine Manufacturer

For the most accurate engine airflow specifications, Donaldson recommends using the intake airflow rate specified by the engine manufacturer. This information may be obtained from the manufacturer.

### Preferred Method Engine Displacement Formula

#### 4-Stroke (Cycle) Engine Formula

##### English Units

$$\text{Airflow (CFM)} = (\text{Engine Size (CID)} \times \text{RPM}) \times \text{VE} / 3456$$

##### Metric Units

$$\text{Airflow (m}^3\text{/min)} = (\text{Engine Size (Liters)} \times \text{RPM}) \times \text{VE} / 2000$$

##### VE = Volumetric Efficiency — 4-Stroke\*

- 0.90 for naturally aspirated gas engine
- 0.90 for naturally aspirated diesel engine
- 1.60 for turbo charged diesel engine
- 1.85 for turbo charged after cooled diesel engine

#### 2-Stroke (Cycle) Engine Formula

##### English Units

$$\text{Airflow (CFM)} = (\text{Engine Size (CID)} \times \text{RPM}) \times \text{VE} / 1728$$

##### Metric Units

$$\text{Airflow (m}^3\text{/min)} = (\text{Engine Size (Liters)} \times \text{RPM}) \times \text{VE} / 1000$$

##### VE = Volumetric Efficiency — 2-Stroke\*

- 0.90 for naturally aspirated diesel engine
- 1.40 for scavenge blower diesel engine
- 1.90 for turbo charged diesel engine

\* The VE values are guidelines. It is always best to use manufacturer ratings when they are available. Electronic controls on modern engines can raise VE ratings to 2.0 or greater.

### Alternative Method Engine Horsepower Formula

##### English Units

$$\text{Airflow (CFM)} = \text{HP (SAE)} \times \text{SA}$$

##### SA = (Specific Airflow) per Horsepower

- 4-stroke naturally aspirated diesel engine — 2.0
- 4-stroke turbo charged diesel engine — 2.3
- 4-stroke turbo charged after cooled diesel engine — 2.3

- 2-stroke naturally aspirated diesel engine — 2.0
- 2-stroke scavenge blower diesel engine — 3.3
- 2-stroke turbo charged diesel engine — 3.6

##### Metric Units

$$\text{Airflow (m}^3\text{/min)} = \text{HP (SAE)} \times \text{SA}$$

##### SA = (Specific Airflow) per Horsepower

- 4-stroke naturally aspirated diesel engine — 0.057
- 4-stroke turbo charged diesel engine — 0.065
- 4-stroke turbo charged after cooled diesel engine — 0.065

- 2-stroke naturally aspirated diesel engine — 0.057
- 2-stroke scavenge blower diesel engine — 0.093
- 2-stroke turbo charged diesel engine — 0.102

### The Pulsation Factor (PF)

On naturally aspirated\*\* engines, intake airflow to the air cleaner can negatively affect the cubic displacement of the air into the engine. To compensate for the loss, we recommend you multiply the engine airflow by one of the following factors:

##### English Units

- 2.1 for 1 cyl.
- 1.5 for 2 cyl.
- 1.2 for 3 cyl.
- 1.0 for 4 or more cyl.

##### Metric Units

- 1,2 m3/min.

## 2 Determine the dust condition for the engine/machine and typical operating environment

For example, a standby hospital generator set would probably see light dust; whereas, a rock crusher would almost always be surrounded by an extremely heavy dust concentration of large dirt particles. Our air cleaner selection chart, on the next page, is a visual guide to select your vehicle type and operating environment.

\*\* No airflow adjustment is required for turbo-charged engines on Donaldson air cleaners with high pulsation filter media (e.g., Donaldson DuraLite™ ECB, ECC, ECD air cleaners).

## 3 Select an air cleaner series

Key design differences are color coded in our selection chart including PowerCore® filtration technology, axial seal, RadialSeal™ and disposable air cleaners.

AIR CLEANER STYLES

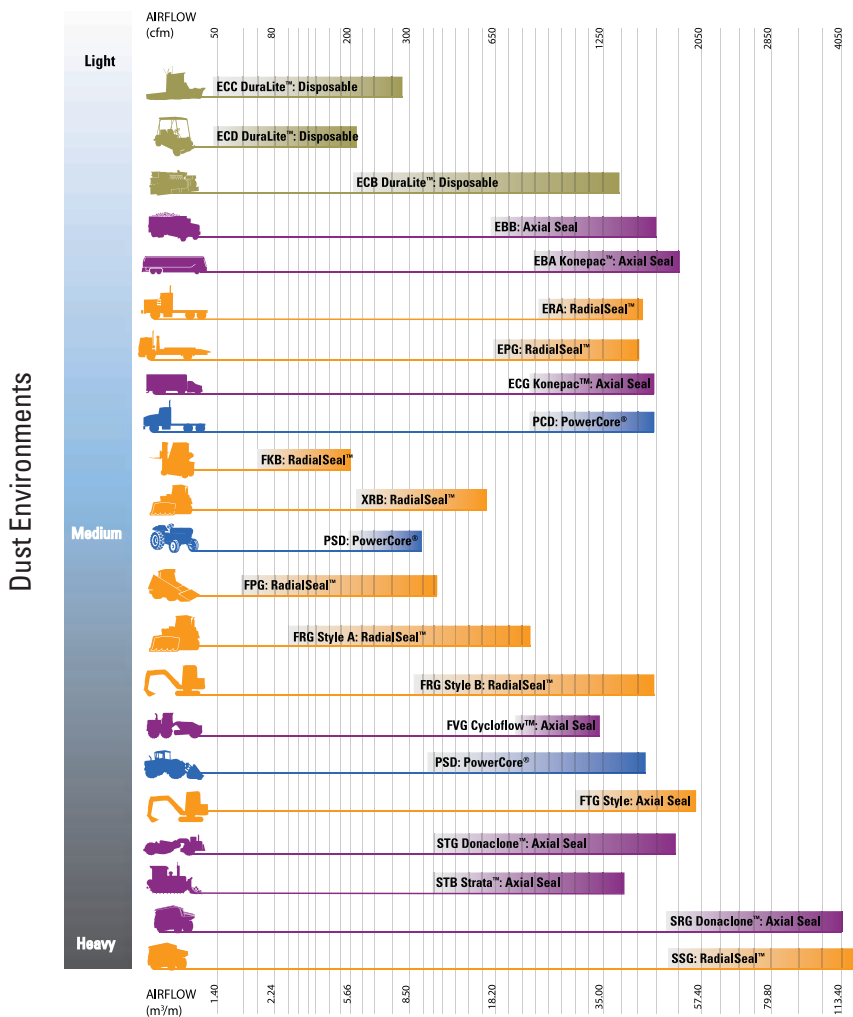

PowerCore®

RadialSeal™

Axial Seal

Disposables

Application notes, dimensional, locations of the inlet and outlet, and mounting configurations are appropriately considered at this step. These parameters are sometimes critical and may lead you to an alternative model or series that is better suited to your application.

## Looking for Engine Airflow Reference Guide?

See Engine HP & Air Consumption Rating Guide Reference Section of this catalog.

Please note, this information should not be used for the application of retrofit emissions devices.

## 4 Choose a specific air cleaner family or series

Use the table of contents from this guide to locate the choices for a particular air cleaner family according to the cfm your engine needs. Refer to the Initial Airflow Restriction table for the style you're considering. If there are two air cleaner models that fit your parameters, choose the one with the **lowest** restriction to ensure maximum service life from that air cleaner/filter.

## 5 Choose intake accessories

Even though they're called accessories, things like inlet hoods, mounting bands, rubber connectors, and clamps are important parts of the overall intake system. See our accessories section for more information.

# Airflow Direction for Donaldson Air Cleaners

Donaldson has air cleaner housings that work in a variety of dust conditions and air flow patterns (A – D and G).

For improved filtration reliability and quicker filter service compared to older axial seal style air cleaners, Donaldson recommends installing either PowerCore® air cleaners or housings with RadialSeal™ sealing technology, whenever possible.

## Flow Direction Legend

### Description

### Part No. Example

<b>A</b> = Air in the End, Out the Side	<b>A</b> 042511, <b>A</b> 112018
<b>B</b> = Air in the Side, Out the End	<b>B</b> 045008, <b>B</b> 120271
<b>C</b> = Air in the End, Out the Same End	<b>C</b> 080025, <b>C</b> 065003
<b>D</b> = Air in the End, Out the Opposite End	<b>D</b> 100030, <b>D</b> 055004
<b>G</b> = Air in the Side, Out the End	<b>G</b> 290010, <b>G</b> 110214

### Standard & Reverse Flow Filters

These filters look exactly the same except there are dark lines viewable on the filter media of one of the filters. What's different? One is a standard flow filter, the other reverse flow. They fit housings that have specific flow requirements and are not interchangeable even though they look like they could be.

Recognizable by dark stripes on the outer side of the filter media.

**Air in the End, Out the Side** (reverse flow filters)

### Light Dust — ERA

Classic cylindrical design, black finish, cowl-mounted for vertical installation. Airflows to 1350 cfm. Page 58

### Light Dust — EBA Konepac™

Same housing as original EBA but with cone shaped filter (Konepac), can be mounted either horizontally or vertically. Airflows to 1850 cfm. Page 63

**FLOW**

**B**

**Air in the Side, out the End** (standard flow filters)

## Medium Dust — XRB

The RadialSeal, plastic, two-stage air cleaner with side inlet for horizontal installation. Body diameters in 8", 10" and 12". Handles airflows of 265-630 cfm. Mount under hood or behind cab. *Page 88*

## Light and Medium Dust — FKB

A compact housing high dust holding capacity and comparable airflow to FPG. Two-stage filtration, side inlet, horizontal installation. Body diameters in 4", 5" and 6". Mount under hood or behind cab. Handles airflows from 70–207 cfm. *Page 80*

## Light Dust — EBB

A small housing with higher dust holding capacity and comparable airflow. Side inlet, horizontal installation. Airflows to 1640 cfm. *Page 74*

## Light Dust — ECB

Disposable, small, lightweight and unitized (housing and filter in one). For high-vibration engines. Can be vertically or horizontally mounted. Airflows to 2118 cfm. *Page 46*

**FLOW**

**C**

**Air in and out the Same End** (standard flow filters)

## Light Dust — ECC

Disposable, small, lightweight and unitized (housing and filter in one). For high-vibration engines. Can be vertically or horizontally mounted. Airflows to 760 cfm. *Page 46*

# Airflow Direction for Donaldson Air Cleaners

## Air in the End, out Opposite End

### Medium to Heavy Dust — PSD

PSD units are small and compact with built-in mounting brackets. Can be vertically or horizontally mounted. Airflows to 915 cfm.  
*Page 32*

### Light Dust — ECD

Disposable, small, lightweight and unitized (housing and filter in one). For high-vibration engines. Can be vertically or horizontally mounted. Airflows to 185 cfm.  
*Page 46*

## Air in the Side, Out the End (standard flow filters)

### Light Dust — EPG

Single stage filtration. Smaller than ECG and lightweight, sturdy, and totally plastic. Horizontal installation. Airflows to 1325 cfm.  
*Page 52*

### Light Dust — ECG Konepac™

Second generation Konepac with a cone-shaped filter has a long and narrow housing. Designed for horizontal installation; usually mounted under hood or behind cab. Airflows to 1600 cfm.  
*Page 68*

### Medium Dust — FPG

The first fully plastic air cleaner in our two-stage filtration line. Tangential inlet, with or without safety element, body diameters from 4" to 8". Handles airflows of 55-346 cfm. Flexible mounting — horizontally, vertically or at an angle. *Page 96*

### Medium Dust — FVG

A heavy-duty housing, our FVG has high airflow throughput and safety filter. Adds a vane in the inlet for a more aggressive first stage of cleaning. Horizontal mounting required. Airflows of 690-1200 cfm. *Page 126*

## Medium to Heavy Dust — FRG

This two-stage filtration housing is available in body diameters of 5" to 18". This style is the ideal upgrade from our older FWA, FWG, FHG and FTG housings. Horizontal mount required. Style A handles airflows up to 795 cfm and our new Style B handles airflows up to 1390 cfm.  
*Page 107*

## Heavy Dust — FTG

Two models available and designed for the engines on large equipment. Both have exact same airflow (from 1480-1870). Inlet tube position on housing body is only difference between the two models.  
*Page 121*

## Heavy (Severe) Dust — STG

The efficient "T" design of the STG allows high airflow and strong two-stage filtration. Two styles available — one with a peripheral inlet and another with a tubular inlet. Handles airflows from 390-1760 cfm. Can be mounted vertically or horizontally.  
*Page 142*

## Heavy (Severe) Dust — SSG

These new models are replacing our older SRG models. Donaldson's largest two-stage engine air cleaner, designed for the engines on large equipment. Handles airflows up to 4800 cfm per air cleaner. Multiple units can be used on very large equipment. The best protection for 500 to 3000+ horsepower diesel engines. This model uses RadialSeal™ sealing technology for filter retention.  
*Page 132*

# www.buydonaldson.com A Single Location to a Global Aftermarket Resource

Donaldson serves industrial and engine markets including in-plant air cleaning, compressed air and gas purification, power generation, disk drive filtration, off-road equipment, vehicles and on-road trucks.

Donaldson filtration solutions serve diverse markets all around the world.

### Air Filter Service — Best Practices

Here are some dos and don'ts from Donaldson about air filter servicing and handling. This servicing information is provided as a best practices guide. It is not however intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

#### Don't remove an air filter from its housing simply to inspect it.

- Removing and replacing the same filter can do more harm than good.
- Ridges of dirt on the gasket sealing surface can drop on the clean filter side when the gasket is released.

#### Never hit a filter to try cleaning it.

- Rapping hard enough to knock off dust damages the filter and can place your engine at risk for dust ingestion.
- Deeply embedded dirt is never released by tapping.
- It is always safer to keep operating until you can change to a new filter than to try and tap out the dirt.

#### Never operate a system with only a safety filter in place.

- Safety or secondary filters used alone will let harmful contaminant enter the engine.
- Safety or secondary air filters are designed to complement the primary filtration or provide protection during primary filtration service.

For longer service between filter changes, consider upgrading to an extended service filter such as Donaldson Endurance™ air filters. Then service the filter by restriction only.

#### Ideally, service your air filter by restriction measurement or follow your regular maintenance schedule.

- If you don't trust your current filter service indicator, getting a new one is a good idea.
- Restriction indicators, mounted on the air cleaner system are recommended for keeping an eye on restriction levels and indicating when servicing is due.
- For testing of initial restriction and confirming remaining filter life, we recommend the greater accuracy of a clock-type restriction gauge or water manometer.

When the indicator window shows "RED," it's time to replace the air filter. A "GREEN" window indicates all is OK.

#### Do not clean a primary or safety filter instead of replacing it.

- Heavy-duty air filtration manufacturers do not recommend any type of cleaning process to be used on their products.
- Once an air filter has been cleaned or washed, the Donaldson filter warranty is no longer valid.
- The dirt holding capacity of a filter is reduced 20 – 40% with each cleaning attempt.
- There is also the real risk of dirt reaching the clean side of the filter if cleaning is attempted.
- The risk of filter damage from washing, tapping, high pressure water, or compressed air cleaning is very real.
- The potential savings from risky attempts at filter cleaning won't come close to offsetting potential damage to engine components.
- Increased engine wear and damage is the result of the ingress of contaminant over time.

#### Don't use a dented or damaged filter.

### Tips and Maintenance Practices for Equipment Longevity!

#### Check any intake hoods and pre-cleaner devices during maintenance routines.

- A missing inlet hood will significantly shorten filter life. If your unit had a hood or pre-cleaner originally, make sure you replace it.
- Check openings and tubes on pre-cleaners to make sure they are not plugged
- Replace any units that are damaged. Damaged or dented units will not operate properly.

#### Never leave an air cleaner open longer than necessary. An open air cleaner with filter removed is a direct entry to the engine.

- Keep your engine protected during filter changes.
- Contaminants that are smaller than the eye can see can be damaging to an engine.
- If the air cleaner housing is not going to be reassembled immediately, be sure to cover the opening.

#### At filter change-out, check to ensure that there is no damage to the air cleaner housing itself.

#### Check for any air leaks in the ducting on both sides of the air cleaner.

An air leak between the air cleaner and the engine gives dirt a direct path into the engine.

#### Do not judge the filter's remaining life by looking at it. A dirty-looking filter may still have plenty of life left.

- On the other hand, a clean-looking filter can also be deceiving.
- You can't see the dirt that's embedded deep within the filter media, and carbon contamination may not be visible to the eye.
- One of the best options for lowest filter maintenance costs and best engine protection is to monitor air filter life with a restriction indicator.
- It's a low-cost and smart investment.

#### Don't ignore a worn or damaged gasket. If your air cleaner has a cover gasket, replace it with a new one when changing filters.

- Some air cleaners, such as the EBA and ERA models, specifically call for a new gasket with each filter change-out.
- Never reuse the old one. Replace it according to the service instructions.

#### Don't take chances with weather-worn Vacuator™ Valves which can admit dirt instead of expelling it.

- Replace any missing or damaged Vacuator Valves and any air cleaner fasteners.
- Make sure the valve is flexible and not inverted, damaged or plugged. Replace it if damaged or if it looks like any of these images. A damaged or missing Vacuator Valve will disrupt the designed flow of air through the air cleaner.

Both of these filters look ready for replacement, but neither have reached their final servicing point.

### More Tips and Maintenance Practices for Equipment Longevity!

#### Never substitute one filter with another one that has a different model number.

- The only exception is in cases where another filter is recommended as an upgrade to an older style filter.
- Filters may look almost identical, but even a small difference in size can prevent a good seal or affect airflow.
- Selecting a filter by fit alone may also give you the wrong media with potentially serious consequences for your engine over time.

#### A water manometer is the most accurate method to verify airflow restriction.

- For testing of initial restriction and confirming remaining filter life, we recommend the greater accuracy of a clock type restriction gauge or water manometer.
- Use the restriction tap provided on the air cleaner or at the transfer pipe.
- Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer.
- Restriction indicators that are mounted on the air cleaner system are recommended for keeping an eye on restriction levels and indicating when servicing is due.

#### Installing RadialSeal™ filters

- Donaldson RadialSeal filters have a dry lubricant on the seal which aids in installation and removal. Do not remove the lubricant.
- No cover pressure is required to hold the seal in place and one should NEVER use the service cover to apply pressure.
- Forcing a cover could damage the housing, filter and fasteners and void the warranty.
- If the service cover presses against the filter before the cover is fully in place, remove the cover, push the filter further into the air cleaner by hand and then the cover will go on with no extra force.

#### Filter service & maintenance records

- Vehicle and engine manufacturers provide filter maintenance practices for the equipment they sell. Make sure to follow their recommendations for routine filter service. Being able to show/reveal your maintenance records for potential warranty claims is essential.
- Like all components, air intake systems have evolved and older styles and filters have different maintenance procedures. Make sure your maintenance personnel are familiar with the proper service techniques.
- Log or track your filter changes. Whether you are going to service by miles, hours or restriction.
- Many maintenance shops find it helpful to record the date of filter change directly on the filter.
- If you have to replace an entire air cleaner housing, consider designs that offer improved filtration performance (high efficiency filtration) or enhanced sealing (Donaldson RadialSeal™ housings).

#### Avoid cross contamination during filter service.

When a dirty filter is at its service point — the inlet side of the filter is loaded with contaminant — take these precautions to eliminate contaminant from getting on the outlet side of your new filter or clean sealing surfaces (gaskets or RadialSeal™ end caps).

- If you wear gloves during service, remove them prior to handling the new filter.
- If you don't use gloves, wash or clean your hands before handling the new filter.
- Keep your new filter in its box until your ready to replace.
- If product box has layers of contaminant, take care that the contaminant doesn't get on the new filter as you remove it from the box.

*The clean side of your air filter can vary depending on the application. Some filters load on the outer surface (shown above — referred to as standard flow), and some load on the inside surfaces of the filter (referred to as reverse flow).*

#### Inspect the entire air induction system

The last step to any air filter service, is to inspect and tighten all air cleaner system connections.

- Immediately replace or repair any visible holes or damaged components.
- Inspect all air ducting for worn spots or damage — elbows, connections and seals.
- Check all clamps, making sure they're secure and tight.
- Inspect your pre-cleaners or inlet hoods (if equipped).
- Annual replacement of air cleaner system gaskets is recommended.
- Reset manual filter indicators.
- Record action items taken in your filter service records.

## Tips and Recommendations for Storage and Handling

Whether it's an empty trailer or building, it's important to practice good storage and handling techniques when it comes to filters. Before installing any filter on a piece of equipment make sure the filter is clean, unused and free of damage and is not more than six years old from the manufacturing date.

- Never store an air filter on a shelf without it being in a box or totally sealed from outside contaminant.
- When you see an open box of filters on the shelf, tape it shut — unless the filters inside the box are individually sealed.
- Handle filters with care to prevent filter damage; for example, don't throw filters into the back of a truck.
- If transporting filters from one job site to another, don't let them roll around on the floorboard or in the back of the truck, as this may cause damage.
- Metal storage shelves may cause condensation to form on filters if sitting directly on metal. Over time the filter may get rusty. This is another good reason to store filters in boxes.
- If the product box has layers of contaminant, take care that the contaminant doesn't get on the new filter when you remove it from the box.
- Practice "first-in, first-out" with your inventory. When possible, always use the oldest inventory first.
- Make sure any labels with product information and manufacturing dates are visible to personnel pulling from the shelves.
- The conditions under which the filters are stored can have a significant impact upon the shelf life of the filter; e.g., conditions of excessive temperatures or exposures to certain chemical environments can have an adverse effect on shelf life.
- Avoid cross contamination from an old filter to a new one. Make sure your hands are clean when handling the new filter and avoid touching/handling the outlet side of the filter.

Air Filter / Air Cleaner

## Take a Look at Air Filtration Efficiency and Dust Holding Capacity

Compare for yourself — see how much dust can pass through your air filter during 100 hours of operation.

<b>Donaldson Endurance™ Air Filters</b> Ultra-Web® Filter Media	<b>Donaldson Air Filters</b> Standard Filter Media	<b>Will-fit Air Filters</b> Standard Filter Media
--	---	--

### You Can See the Difference!

These dust vials show the actual amount of Arizona fine test dust that passes through the air filter media for every one kilogram of dust fed to the air filter, which is equivalent to 100 hours\* of equipment operation.

Will-fit filters can allow up to 100 times more dirt to pass through the filter into the engine than Donaldson Endurance air filters with Ultra-Web filter media.

\* Estimate based upon typical medium dust operating conditions with 92% pre-cleaner efficiency. Actual results may vary.

### Donaldson Ultra-Web® nanofiber filtration technology delivers cost saving benefits:

- Superior filtration
- Long filter life with submicron contaminant
- Highest efficiency
- Ideal for extended maintenance intervals
- Longer engine life

### Don't leave engine protection to chance!

Use Donaldson Endurance air filters with the blue Ultra-Web nanofiber media for maximum filtration efficiency and superior dust holding capacity.

## All Nanofibers are Not Created Equal

Since Donaldson introduced Ultra-Web® to industrial applications nearly 30 years ago and to the diesel engine market almost 20 years ago, the technology has been continually advanced and perfected to deliver longer filter life and higher efficiency while protecting the environment.

## ULTRA-WEB® High Efficiency Nanofiber Filters Built to Last

Ultra-Web nanofiber filtration technology strikes just the right balance between the strength of the fiber density of the web and the level of filtration. Ultra-Web nanofibers produce a very fine,

continuous fiber that form a permanent web-like net that traps dust on the surface of the filter media.

### Longer Filter Life

Ultra-Web technology is proven and perfected to last up to two times longer than

axial filters. What's the secret? Ultra-Web technology keeps particulate on the surface of the media. Filtration scientists attribute surface loading of dust with lower operating pressure drop over a much longer period of time. This means less energy is required to pulse off the dust and allows the filter to perform longer. Conversely with other types of filters, pressure drop starts higher and continues to rise quickly, which shortens the life of the filter and uses more energy.

### Ultra-Web Nanofiber Technology

## Don't Throw Away a Good Filter Just Because it Looks "Dirty"

Although this air filter may look "dirty" — it can go plenty more miles. Installation of a restriction indicator can save you money and time.

### Why Service By Restriction?

Proper air cleaner servicing will result in maximum engine protection against the ravages of dust. Proper servicing can also save you time and money by increasing filter life and dust cleaning efficiency.

By using proper filter restriction measurement tools you will use the full life of the filter at maximum efficiency. DON'T BE FOOLED by filter appearance: it should look dirty.

The only way to determine when a filter is plugged or plugging is to measure the restriction on the system with the engine working at max airflow.

### Two of the most common air cleaner servicing problems are:

1. Over-servicing: the least efficient time in the life of the filter is when it is new. Filter elements increase in efficiency as dust builds up on the media.
2. Improper servicing: your engine is highly vulnerable to abrasive dust contaminants during the servicing process when the filter is removed from the housing. A leading cause of engine damage is due to careless servicing procedures.

### Choose Restriction Measurement Tools that Best Fit Your Applications

Donaldson offers a variety of restriction measuring devices that help you get maximum filter utilization. All measure restriction in inches of water vacuum. All are resistant to vibration, breakage, weather, corrosion, dust, and dirt to assure reliable filter restriction readings.

**Continuous Reading** devices show how much life is left in the filter are:

- The Informer™
- Service Gauge for Instrument Panel

**Go/No-Go** restriction readings on heavy-duty vehicles are:

- ServiSignal™
- Visual Restriction Indicator
- Electrical Indicator
- SafetySignal™ for safety filters

**In-Field** restriction readings or for more accurate readings use the In-Field Service Gauge Kit #X003903

### Will Using Aftermarket Filters or Mufflers Void My Warranty?

**Answer:** Good News! No need to worry about voiding your warranty — you can use aftermarket products! You still need to follow your manufacturer’s recommended maintenance practices, but your warranty is protected under the Magnuson-Moss Warranty Act. Information on the Magnuson-Moss Warranty Act is available at <http://www.ftc.gov/bcp/edu/pubs/business/adv/bus01.shtm#Magnuson-Moss>.

In addition, Donaldson warrants its aftermarket products against failure due to defects in materials and workmanship for the period specified under the Terms and Conditions for the particular product. More information is available at [www.donaldson.com/en/engine/support/datalibrary/000194.pdf](http://www.donaldson.com/en/engine/support/datalibrary/000194.pdf).

### Worried About Water in Your Air Intake System?

Sometimes you can't help operating equipment in extreme moisture environments, but it's good to know a few things to help keep your air intake system running at top efficiency.

#### Typical Symptoms of Water Ingestion:

- High restriction indications
- Mud caked in the Vacuator™ Valve
- Wet, wavy air filter media
- System rust, corrosion and/or water damage
- Moisture-related environmental problems such as icing

#### Simple Tips to Keep Water Out of Your System:

- Check and clear the VacValve daily
- Make sure the air cleaner cover and filter are installed properly
- Inspect air intake system for any leaks

**Caution: A water-soaked air filter will occasionally lock-up a restriction indicator!**

A restriction indicator's "lock-up" restriction level is generally marked on the indicator itself. To check an indicator, remove it, wipe the base clean, then apply a small amount of vacuum. If the indicator locks up, it is okay. If not, replace the indicator.

**Donaldson Filtration Solutions**  
**Engine Aftermarket Warranty for the Americas**

**Warranty Coverage**  
 Donaldson warrants its Aftermarket products against failure due to defects in materials and workmanship for the period specified under Terms and Conditions for the particular product. Donaldson's obligation under this warranty covers replacing the failed product, including transportation charges, only. If the Donaldson product failure is the sole and direct cause of damage to the equipment on which the product was properly installed, Donaldson will reimburse reasonable costs to restore the equipment to the condition it was in immediately before the failure. This warranty does not cover failure due to misapplication, misuse, abuse, neglect, rust through and corrosion (mufflers), improper installation, improper service practices or non-Donaldson approved modifications.

**Notification**  
 Donaldson must be notified in writing of any claims covered by this warranty within one year of the date of failure. Donaldson, at its discretion, will either physically visit the site where the alleged failure has been found, or request that all parts (Donaldson and other relevant parts) be shipped prepaid to its General Office, in care of the Product Lab or as otherwise specified.

**Terms and Conditions**  
 Warranty coverage begins on the date and mileage the product is purchased by the user and expires when the specified number of years or miles has passed, whichever occurs first.

The length of warranty for replacement products provided under warranty coverage is the balance of the warranty period remaining on the product being replaced.

Engine and equipment manufacturers warranties remain in effect when Donaldson products are used.

**Warranty Length by Product Type**

Filtration Products	Warranty from Date of Delivery to User
Liquid Filter Assemblies and Accessories	1 year
Air and Liquid Filters	Until first cleaned or serviced in any manner
Air Cleaner Housings and Accessories	1 year
TopSpin™ HD	Limited Lifetime Warranty
Air/Oil Separators	6 months / 1,000 hours from in-service date
Exhaust Products	Warranty from Date of Delivery to User
Diesel Mufflers	4 years or 500,000 miles (800,000 km)
Vertical Installation	3 years or 500,000 miles (800,000 km)
Horizontal Installation	1 year
Gas Mufflers	1 year
Silent Partner™ Exhaust Silencer	4 years or 1,000,000 miles (1,600,000 km)
Stainless Steel	4 years or 500,000 miles (800,000 km)
Aluminized Steel	1 year or 100,000 (160,000 km)
Exhaust Accessories	90 days
Chrome Parts (peeling and blistering only)	1 year or 120,000 (200,000 km) - on-highway use only
Flex Pipe	1 year or 120,000 (200,000 km)
Long-Life Flex Pipe	1 year or 120,000 (200,000 km)

## Keep Those ECG Konepac™ Air Cleaner Latches Inspected

ECG style air cleaners have three cover latches that need to perform correctly to ensure the element gasket is sealing properly. These latches should be checked for tightness and wear. To check for tightness, close all three latches, then open and close them one at a time. There should be good tension and should snap tightly when closed. If any latches seem loose or rattle, they should be replaced.

The spring clip and pin repair kit is X009291 and fits all ECG style air cleaners.

The most obvious place to check for wear is the spring latch tip (the part that hooks into the notch on the filter cover). The tip may become sharp and cut into the filter cover with extended wear. The tip may also wear to the point where it will not hook onto the filter cover at all. If any of these conditions are evident, the latch should be replaced.

Ref: Shoptalk Card F115246

## No Matter What Dust Condition, Pre-cleaners Extend Air Filter Life

Six pre-cleaner styles offer the broadest product range in the industry

Pre-cleaners remove contaminant of varying sizes from entering the intake duct; they don't require any engine power to operate. Some devices collect the contaminant (Full-View), others just eject or drop the contaminant (TopSpin, Top Spin HD / in-line separator), or are connected via a scavenge system and route debris out the exhaust system (Donaspin / Strata Cap).

- Strata Cap and Donaspin are units for scavenge air system option for heavy dust condition operating environments. Additional components required for scavenge system (hoses, check valves, clamps and exhaust ejector)
- Pre-cleaners extend life of vehicle air filters and serve as rain caps
- Units are made of durable materials — either metal or impact resistant plastic
- Units install outside of engine compartment — leaving more space under hood for other components (exception-in-line separator)
- Pre-cleaners have no wires or power requirements
- Requires additional components for scavenge system (hoses, check valves, clamps and exhaust ejector)

### Quick Comparison

More characteristics about our pre-cleaner line. For more details, contact your local distributor or dealer.

Dust Condition	Max. Sepr Efficiency	Pre-Cleaner Family	Scavenge Required	Service Required	Material
Heavy	96%	Strata™ Cap	Yes	Yes	Plastic
	90%	Donaspin™	Yes	No	Steel
Medium	85%	TopSpin™	No	No	Plastic
	80%	TopSpin™ HD	No	No	Aluminum/ Stainless Steel
	70%	In-Line Separator	No	No	Steel
	75%	Full-View	No	Yes	Steel/Plastic

### Did You Know that Your Truck, Tractor and Airplane Can All Use Donaldson Filters?

If you own or operate a Beechcraft, Piper, Cessna or Mooney airplane, or a Bell, Aerospatiale (Eurocopter) or MD Hughes rotorcraft, chances are it was delivered with Donaldson filters onboard. Airframe and engine manufacturers trust Donaldson quality. We've been providing superior pleated media engine air intake, fuel, lube and hydraulic filters for piston-powered aircraft for more than 40 years. When it comes time for your next maintenance check, don't compromise the integrity of your airplane! Ask your mechanic to install Donaldson OEM filters for maximum performance and filter life.

### Donaldson Keeps Military Vehicles Moving

The Bradley M2/A3 Fighting Vehicle relies on a Donaldson air cleaner and muffler.

#### Did you know . . .

Donaldson designs and manufactures filtration and exhaust products for a large variety of defense applications and equipment? For example . . .

The LCAC Hovercraft uses Donaldson Strata™ panel filters to supply clean air to its engine.

Donaldson Defense Group introduced the Strata™ tube pre-cleaner on the Sikorsky CH-53 Helicopter.

We've designed filters to perform in extreme environments. Our filters are used worldwide in the roughest military applications, effectively filtering air and exhaust, as well as transmission fluid, hydraulic systems, lube oil, coolant, and fuel.

 PowerCore Air Cleaners  
     for Cummins® Engines ..... 43  
     Ford 7.3L Retrofit Kit ..... 44

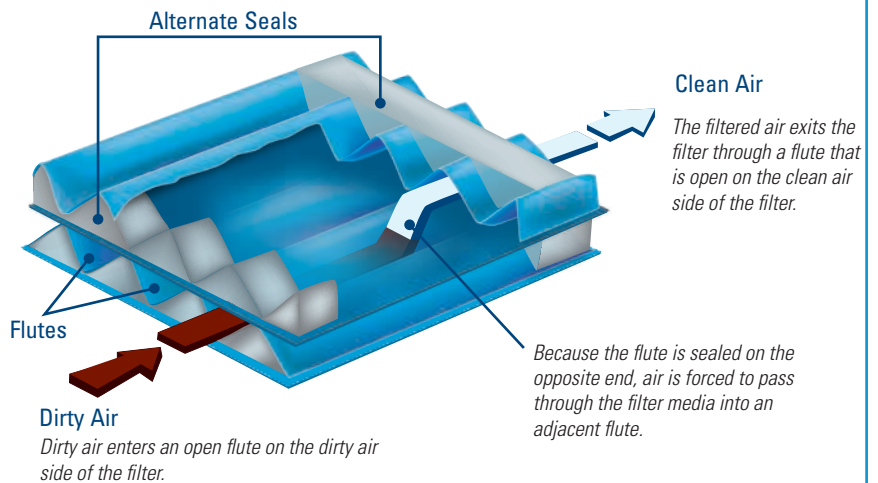

**Our PowerCore® air cleaners deliver . . .**

- System design flexibility
- Metal-free, lightweight materials
- Rugged construction
- Straight-through airflow technology invented by Donaldson
- Advanced sealing technology
- 3x more efficient than the average Axial pleated filter
- RadialSeal™ advanced sealing technology
- Inertial particle separation technology

This new air cleaner family offers two-stage filtration in a single, compact unit that delivers superior filtration performance using our PowerCore Filtration Technology.

For greater filtration, our PSD air cleaners are adaptable to a scavenged air system.

**PowerCore® Straight-Through Airflow Schematic**

**Dust Holding Capacity**

**Overall Efficiency**

Cummins is a registered trademark of Cummins Filtration, Inc.

## Millions of PowerCore® Filters Installed on Original Equipment

**PowerCore**  
A Donaldson Filtration Technology

This air cleaner family offers two-stage filtration in a single, compact unit that delivers superior filtration performance using our PowerCore® Filtration Technology.

This non-metal air cleaner (except for cover clamps) is ideal for equipment operating in medium to heavy dust environments.

### Applications

- Off-road equipment operating in medium to heavy dust conditions with engine airflow ranges up to 1490 cfm
- Scavenged system components — exhaust ejectors and check valves — now available. See page 38 for more details.
- Obround housing shape allows for a narrow or wide mounting orientation.
- Models have either end or side filter service access
- Sustained temperature tolerance: -40 °F to 180 °F / -40 °C to 82 °C

### Service Access on Inlet End — PSD08

*Exploded view of D080020*

### Service Access on Side — PSD08, PSD09, PSD10, PSD12 and PSD14

*Exploded view of D090073*

## Excellent Performance in Half the Space

### Features

- More compact at a given performance level than standard pleated filters
- Non-metal filters
- Improved engine protection: no media movement, expansion, contraction or bunching
- Improved contaminant encapsulation: dust and dirt stay contained in filter during service
- High efficiency integrated pre-cleaner improves filter life
- Improved handling and maintenance: lighter and smaller, changing filters is a snap
- Easily serviced; no tools required to remove or replace cover
- Can be used with scavenge line or Vacuator™ Valve
- Built in mounting brackets eliminate the need to purchase separate mounting bands

The filter on the side-service access models can be easily removed with the built-in grab handle.

A PSD10 mounted horizontally was the equipment manufacturer's choice on this diesel-powered (285 HP @ 2,000 RPM) feller buncher.

D080020 — Horizontal

D080056 — Vertical

### Mounting Flexibility

With mounting locations on three sides of the housing (exception D080020 & D080026) and two separate drop tube orientations, the PSD series offers the greatest amount of flexibility for a wide variety of installations.

U-clips are shipped with each air cleaner. Affix these to the mounting location (all in the same direction) and slide the housing into place. See dimensional illustration for u-clip mounting hole pattern on pages 35, 36 and 37.

The air cleaner is not to be mounted using U-clips on both sides adjacent to the access cover. Fixation Points use M8 fasteners. Maximum torque is 18 N•m.

The PSD14 air cleaner MUST be mounted with nine U-clips — four on the side opposite the access cover and all five U-Clips on ONE of the two sides.

D090120 — Horizontal

D090073 — Vertical

D100072 — Horizontal

D140078 — Vertical

## When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table below. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

### Initial Airflow Restriction (non-scavenged)

## PSD Air Cleaners and Scavenge Air Systems

PSD air cleaners are designed to operate with or without aspiration, otherwise known as scavenging. PSD performance charts are provided for both non-scavenged and scavenged.

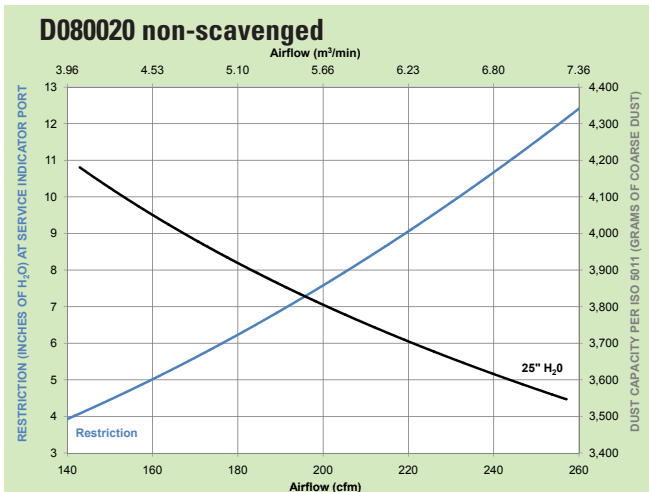

The advantages to scavenging are:

- Higher pre-cleaner efficiency (resulting in longer filter service life)
- Completely self-servicing (no regular maintenance needed on pre-cleaner)

Aspirating an intake system through the use of a scavenging device adds more components (an ejector and some plumbing) to the overall system, but will enhance the separator efficiency of the pre-cleaner and consequently extend the filter service life.

The PSD air cleaner and pre-cleaner will function adequately without scavenge — the result is less filter service life than with scavenging. However, it is recommended to use a scavenge system for horizontally mounted PSD12 and PSD14 applications.

## Scavenge System Components

Scavenging is accomplished by introducing a secondary airflow to the drop tube on the air cleaner — generally through the use of an ejector or ejector muffler (see illustration on right). This flow pulls the separated contaminant from the pre-cleaner and inserts it into the exhaust stream.

Exhaust ejectors (below), adapters, and check valves (next page) complement the PSD air cleaner product offering.

### Illustration of Scavenge Connection with PSD10 Horizontal Model

## Exhaust Ejectors

All exhaust ejectors are constructed of heavy-gauge, aluminized steel and painted with high-temperature black paint. Select the appropriate ejector by the intake airflow or exhaust flow (CFM) of your engine. These same parts and more information on ejectors can be found in the accessories section of this product guide.

## Check Valve Operation and Orientation

- Prevents back flow of exhaust gas into pre-cleaner
- For proper installation, it is important that the index is installed upward and horizontal with no more than a 20° variation. See below.
- Install inline check valve as close as possible to the air cleaner
- Temperature resistance of 200 °C / 400 °F

Part Number	Inlet Dia.		Outlet Dia.		Length		Body Dia.

### Scavenge flow direction

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer. Note: Your air cleaner service cover may be in a different position than shown.

## 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular scheduled service.

## 2 Check Vacuator™ Valve & Pre-Cleaner Tubes

Shut off the engine. Inspect the Vacuator™ Valve (or scavenge line) for damage. If damaged, replace. If plugged or full of contaminant, check the pre-cleaner tubes, which should be free of contaminant. If plugged or excess contaminant is visible, the pre-cleaner tubes will need to be cleaned.

To clean the pre-cleaner tubes, remove the housing service cover and Vacuator Valve and leave the filter installed (to avoid dust from entering the air induction outlet). Use a low-volume of compressed air to gently blow out the separator tubes. The compressed air can be pushed through both sides of the tubes AND from the drop tube where the Vacuator Valve attaches.

If compressed air is not available or the use of compressed air was not effective due to dried contaminant within the housing, remove the air cleaner from the machine, cover the air intake pipe to prevent contaminant. Remove the primary and secondary filters and Vacuator Valve. Use a low pressure water (e.g., garden hose) to clean the tubes and inside of housing. Direct the flow of water through the separator tubes from both ends and repeat as needed to clean out the housing. Spray out the Vacuator Valve port, alternating between it and the separator tubes. Make sure that all internal housing surfaces are dry prior to reinstalling the filters, Vacuator Valve, and unit on the machine.

*NEVER use a pressure sprayer to clean out the air cleaner housing while it is installed on the machine. Avoid using excessive pressure when spraying out the separator tubes as damage can occur.*

## 3 Remove the Primary Filter

For end service pull the filter out of the housing.

For side service push down on the service handle to tilt the filter to a 5° angle. This will loosen the seal. Then, pull up on the service handle to remove the filter from the housing.

## 4 Visually Inspect the Safety Filter

Remove any excess dirt and wipe out the housing with a damp cloth before servicing the safety filter. Visually inspect the safety filter but do not remove it unless it is damaged or due for change-out. Verify that the safety filter is properly seated in the housing. The safety filter should be replaced every three primary filter changes.

*The safety filter should be replaced every three primary filter changes.*

## 5 Remove Safety Filter if Indicated or if Excessively Contaminated

To remove the safety filter, use the plastic handle on the face of the safety filter. Pull the filter toward the center of the housing and remove it. Ensure that the outlet tube sealing area is clean and undamaged. If the safety filter is removed and the new filter is not to be installed immediately, be sure to cover the seal tube with a cloth so that dirt is not admitted. After removing the safety filter, wipe the air cleaner housing interior and seal surfaces with a clean, damp cloth.

## 6 Inspect the New Filters

Visually check for cuts, tears or indentations on the sealing surfaces and the media pack before installation. If any damage is visible, do not install.

## 7 Replace the Safety Filter

If replacing the safety filter, use the plastic handle. Slide the filter at an angle into the outlet side and push it in place until the filter seats firmly and evenly within the housing.

On side-service access models, insert the safety filter tab into the positioning slot before pushing the filter into place.

## 8 Insert the Primary Filter

For end service access models, slide the primary filter into the housing until the gasket seats against the housing. For side service access models, slide the filter down at approximately a 5° angle until it makes contact with the end of the housing. Rotate the filter toward the outlet section to complete the seal.

## 9 Replace the Service Cover

For end service access models with hinge tabs, insert the hinge tabs into the housing, tilt the service cover into place and secure latches. For end service models without hinge tabs, put the service cover into place and secure the latches. For side-service access models, place the service cover in position and fasten the metal or rubber (PSD14) latches. If the cover doesn't seat, remove and re-check the filter position and access cover orientation.

## 10 Inspect the Entire Air Cleaner System

Make sure that inlet and outlet connections are in good condition. Torque to and do not exceed 40 in·lb. Replace rubber connectors if necessary and reset the service indicator.

## Severe Duty Air Induction System Retrofit Kit 1999\* – 2003 Ford F250-550 or Excursion with 7.3L Power Stroke® Diesel Engine

### Application

1999\* – 2003 Ford F250-550 or Excursion with 7.3L Power Stroke® Diesel Engine

### Features

This retrofit air induction system kit is ideal for truck owners who operate their vehicle in dirty and dusty conditions and want longer filter service life and improved engine protection.

- Three times or more efficient compared to average Axial pleated or reusable wire mesh filters
- Straight-through airflow delivers powerful performance
- Improved engine protection — no media movement, expansion, contraction or bunching
- Improved contaminant encapsulation — during service the dust and dirt stay contained in the filter
- Installs in 30 – 45 minutes

Kit X007953 includes the air cleaner assembly, filter, duct, battery tray and blanket, fasteners, and installation instructions.

\* Built after January 1, 1999

**For Diesel, Gasoline and Compressed Natural Gas Engines, and Hybrid Vehicles Operating in Light to Light/Medium Dust Conditions**

Over-highway trucks, stationary engines, light industrial vehicles, and sport utility/light trucks generally operate in low-dust environments. They still need top quality air filtration systems to protect them and keep them running at peak efficiency. Those operating in high carbon environments particularly need protection.

## Convenient DuraLite™ Disposables

### Rugged Air Cleaners for Small and/or High Pulsation Gas & Diesel Engines

Donaldson's DuraLite Air Cleaners are tough, non-metallic, lightweight, self-supporting, and completely disposable. They are also easy to install, durable, and reliable.

They are designed to function well under high and severe pulsation conditions found in many applications, especially two- and three-cylinder engines. Vibration-resistant media is potted into molded housings of rugged ABS plastic — so they don't fall apart as other designs might.

### Applications

- Can be mounted vertically or horizontally
- Gas and diesel engines and hybrid vehicles in light to medium dust conditions
- Powered vehicles and equipment
- Mobile engines
  - Stepvans
  - Recreational vehicles
  - Lawn and garden tractors
- Stationary engines
  - Air compressors
  - Refrigeration units
  - Material handling equipment pumps
  - Gen sets
  - Welding equipment
- Marine engines
  - Propulsion units
  - Gen sets
- Provides variety of airflow volumes to engine: from 42 to 2118 cfm
- Temperature tolerance:
  - 180 °F/83 °C continuous
  - 220 °F/105 °C intermittent

Donaldson recommends the use of a high torque hose clamp (up to 150 in-lbs) for DuraLite air cleaners. This

clamp eliminates the need for double clamping. Order one for each DuraLite air cleaner. See Accessories Section for more information.

*DuraLite™ Air Cleaners — sturdy, one-piece, and disposable — are designed to withstand the high pulsation of small engines such as the ones shown here. They are easy to maintain because there are no service parts. When the filter is full, simply throw it away.*

### Air Cleaner Features

- No serviceable parts. Air cleaner housing and filter are one unit.
- Designed to withstand severe intake pulsation
- Economical replacement cost
- Self-supporting, sturdy
- Very reliable: only one critical seal
- Lightweight and compact in size
- Non-metallic (except B085008 which is galvanized steel), non-corrosive . . . ideal for marine applications
- Completely disposable . . . acceptable for normal trash pick-up (DuraLite should not be incinerated)
- Easily installed and maintained
- Minimal removal clearance needed — only 1.5"
- Three airflow styles available to fit virtually any engine intake configuration
- Various media available for specific applications — high pulsation and high humidity

## When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at right. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

## Specification Illustrations

### Specifications Notes:

- 1 - Body is galvanized steel with 4" (254mm) dia. inlet on side
- 2 - Body is plastic with 4" (254mm) dia. inlet on side
- 3 - Screen inlet deters rodent infestation
- 4 - Has inlet holes at both ends of filter

### Media Types:

- A = Standard cellulose media
- B = Treated to withstand higher humidity; most often used in marine applications. Designed for higher airflow/low dust applications ... should NOT be used for normal engine operating environments.
- C = Reinforced to withstand higher pulsation applications
- D = Designed for higher airflow/low dust applications ... should NOT be used for normal engine operating environments

### ECB DuraLite

### ECC DuraLite

### ECD DuraLite

Note: D065008 has inlet holes at both ends of filter

## Installation Instructions

### Installation

DuraLite air cleaners can be mounted in two ways:

1. **Direct Mount:** mounted directly on the intake manifold.
2. **Remote Mount:** mounted away from engine and connected to engine with inlet piping.

### Installation Tips

- Engage outlet neck of the DuraLite over intake piping for a full 1½" to insure a secure, lasting seal.
- Tighten clamp around outlet neck to 60 in•lb minimum. A Donaldson high torque hose clamp is recommended.
- On remote mount style, avoid crushing the body with body clamps. A snug fit is best, and body clamps are not always required.
- Keep away from engine manifold and other very hot components (DuraLite is rated at 180 °F / 83 °C maximum sustained temperature).
- Keep away from battery acids, brake fluid, and other caustic fluids.

### Direct Mount

### Remote Mount

## Service Recommendations

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### Servicing Intervals

Choose either of two types:

- **Scheduled (Miles or Hours).** DuraLite service intervals can be integrated into any existing maintenance program.
- **Filter Service Indicator.** This method offers the most accurate filter maintenance program, delivering maximum filter life, less machine downtime, and reduced maintenance costs.
- Washing, cleaning or servicing the filter in any way voids the warranty.

### Disposal

Follow your local disposal guidelines for disposal.

### Service Indicator Location

For proper restriction readings, a restriction fitting tap must be located between the engine intake and DuraLite outlet neck. The tap should be located in a straight section of the intake pipe at least one pipe diameter away from the manifold or any bends, elbows or reducers.

### Servicing Tips

- Do NOT judge the filter on the basis of visual inspection! If it's doing its job, it **should** look dirty. DuraLite filter life is longer than you may think. Change the filter only when restriction readings indicate to do so.

- During filter change out, do NOT leave the inlet ducting exposed any longer than necessary (a few minutes) during service.
- Never wash or clean the unit for reuse.

- Lightweight
- Sturdy
- One Piece Construction

Use the initial restriction table if your selecting an air cleaner. For a direct replacement to Parker, select the air cleaner style tables.

## When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at left. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

## Durable, Corrosion-Free Air Cleaner

### Improved Reliability, Superior Engine Protection, Easiest Serviceability

The EPG air cleaner series, which incorporates Donaldson RadialSeal™ Sealing Technology, offers improved reliability and durability, reduced weight and costs, and better serviceability.

EPG air cleaners: conquer underhood space limitations; are corrosion-free and lighter in weight than traditional metal units; are more sturdy than ever before; and have a reliable, easy-to-service design.

The filter inside the air cleaner is also quite different from filters with metal end caps. The one-piece molded end caps encase the ends of the media and filter liners. The filter fits over the housing outlet tube, creating a reliable seal — without the hassle of separate sealing gaskets.

Of the six models, three include a primary filter and three include a primary and safety filter.

*Whether you are going to service by miles, hours or restriction, keep accurate maintenance records and log or track your filter changes.*

*This EPG RadialSeal™ Air Cleaner is part of a complete Donaldson intake system. The entire engine air intake system is made of molded plastic. Between the intake scoop and the air cleaner are Donaldson Strata™ tubes, which provide pre-cleaning. Particulate from this stage is scavenged off and out through the exhaust system. In this system, the EPG air cleaner provides the second stage of cleaning.*

*The EPG Air Cleaner, which fits neatly under the hood, has RadialSeal™ Sealing Technology that delivers a reliable seal in rugged environments and quick filter change-out.*

## Provides up to 1325 cfm Airflow per Air Cleaner

### Applications

- Provides up to 1325 cfm airflow per air cleaner — double airflow to engine by using two units
- Horizontal or vertical installation

### Ideal for

- On-highway vehicles
- Marine and offshore equipment
- Light construction vehicles
- Agricultural vehicles
- Compressors and generator sets

### Air Cleaner Features

- Durable plastic housing is corrosion-free and weighs less than metal air cleaners
- Very few service parts. Easy to service.
- No mounting bands required. Installs securely via molded-in mounting flange(s) with pre-drilled holes on the side of the housing.
- Available in three body diameters: 11" (279mm), 13" (330mm), 15" (381mm)
- Temperature tolerances:  
11" (279mm) dia: -40 °F to 220°F (-40 °C to 104 °C)  
13" (330mm) 15" (381mm) dia: -40 °F to 200 °F (-40 °C to 93 °C)

### Filter Features

- RadialSeal™ Sealing Technology ensures reliability, is easy to service and makes the filter self-centering, self-aligning and self-sealing
- All models can accommodate safety filter
- Donaldson Endurance™ extended service and high efficiency filters — which capture sub-micron contaminant such as soot and carbon — are available for some models (see service parts listing on page 55)

### The Better Alternative to Drain Holes

The Donaldson Vacuator™ Valve is an optional accessory for the EPG that expels water from the air cleaner **before** any reaches the filter — thereby extending filter life. Bare drain holes can clog or take in back splash, but the Vacuator™ Valve never does. The P525956 is a 1" (25mm) diameter model designed for over-highway applications.

### Installation is fast and easy:

1. Locate the lowest point of the air cleaner to allow proper drainage through Vacuator Valve.
2. Remove filter(s) before drilling.
3. Drill a 1" (25mm) hole centered at the lowest point of the air cleaner as shown in illustration. Remove debris from drilling.
4. Install Vacuator Valve (P525956) by pushing it into the hole.
5. Reinstall filter(s), reattach cover.

**NOTES:**

- 3 = Shipped with air cleaner initially
- 4 = Safety filter is designed to fit this air cleaner, but was not originally shipped with it (note that adding a safety filter will decrease the maximum airflow throughput)

ES = Extended Service  
HE = High Efficiency  
SM = Scheduled Maintenance

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Measure the restriction of the air cleaner with a Donaldson filter service indicator, service gauge or water manometer. Use the restriction tap provided on the air cleaner or at the transfer pipe. Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

### 2 Remove the Filter

Unfasten or unlatch the service cover. The RadialSeal™ filter fits tightly over the outlet tube to create the critical seal, so there will be some initial resistance, similar to breaking the seal on a jar. Gently move the end of the filter back and forth to break the seal. Rotate while pulling the filter straight out. Avoid knocking the filter against the housing.

### 3 Clean Out the Vacuator™ Valve

Remove the Vacuator Valve and clean out any dust found in the drop tube. Reinstall Vacuator Valve or replace if found worn or damaged. If your air cleaner is equipped with a Vacuator Valve, visually check and physically squeeze it.

Make sure the valve is flexible and not inverted, damaged or plugged. Replace it if damaged or if it looks like any of these images. A damaged or missing Vacuator™ Valve will disrupt the designed flow of air through the air cleaner.

### 4 Inspect the Old Filter

Inspect the old filter for any signs of leaks. A streak of dust on the clean side of the filter is a telltale sign. Eliminate any source of air leaks before installing the new primary filter.

### 5 Visually Inspect the Safety Filter

If your air cleaner has a safety filter, do a visual inspection for damage. Verify that the safety filter is properly seated in the housing. Do not remove the safety filter unless it is damaged or due for replacement. The safety filter should be replaced every three primary filter changes. When you remove the safety filter, replace it immediately or make sure you cover the air cleaner outlet tube to avoid admitting any contaminant.

## 6 Clean Both Surfaces of the Outlet Tube

Use a clean damp cloth to wipe the filter sealing surface and the inside of the outlet tube. Contaminant on the sealing surface could hinder an effective seal and cause leakage.

## 7 Inspect the New Filter

Visually inspect the new filter, paying special attention to the sealing area which is inside the open end.

As you inspect the filter's RadialSeal take care not to wipe the sealing surface. The factory has placed a dry lubricant on the seal which aids in installation and removal. NEVER install a damaged filter.

## 8 Insert the New Filter Properly

If you're servicing the safety filter at this change-out, carefully seat it into position before installing the primary filter. Seat the filter by hand, making certain it is completely inserted into the air cleaner housing before securing the cover in place. To complete a tight seal, apply pressure by hand at the outer rim of the filter, not the flexible center.

Never use the service cover to push the filter into place since no cover pressure is required to hold the seal. Using the cover to apply pressure could damage the housing and cover fasteners, and will void the warranty.

If the new filter is not fully in place, remove the cover and push the filter further into the air cleaner with hand pressure on the outer rim. The cover should then go on with no extra force. Then secure the service cover.

## 9 Check Connectors for a Tight Fit

Make sure restriction indicators are reset and in proper working order.

Verify that all mounting bands, clamps, bolts, and connections in the entire air cleaner system are tight.

Check for holes in piping and repair or replace as needed. Any leaks in the intake piping will admit dust directly to the engine.

## Cowl-Mounted Air Cleaner

### Superior Protection with RadialSeal™ Sealing Technology

Looking for a replacement to our older EBA cylindrical-shaped axial seal style air cleaner? Our ERA RadialSeal™ air cleaner series deliver a reliable filtration system for your engine and simplifies filter service.

#### Applications

- Light dust, single-stage air cleaner
- Vertical installation, mounted on the side of the truck
- Primarily for on-highway trucks
- Can be installed on driver or passenger's side
- Allows up to 1350 cfm airflow throughput per air cleaner

(Mounting the unit directly to the engine is not recommended)

#### Air Cleaner Features

- Black, corrosion and chemical resistant polymer paint retains its finish through all types of weather
- Available in 11" (279mm), 13" (330mm) and 15" (381mm) diameter sizes
- Order inlet hoods separately
- Double airflow throughput by using two air cleaners
- Vacuator™ Valve automatically expels moisture from bottom of housing

#### Filter Features

- RadialSeal sealing technology — high tech resilient urethane ends that hold the filter firmly in place and maintain a tight, reliable seal — reduces the number of components and ensures reliability
- Extended service, high efficiency Donaldson Endurance™ filters are available on some models (see service parts list for part numbers)

*Our older, classic EBA cowl-mounted air cleaner (shown on the right) has been replaced with our ERA Air Cleaner.*

*EBA replacement filters are still available through your local Donaldson outlet.*

*The ERA Style air cleaner has RadialSeal sealing technology and fewer access bolts to remove during service compared to our old EBA air cleaner design.*

*The exterior finish is glossy black, polymer paint.*

*Don't forget to protect the air cleaner from rain and exposure, by adding an inlet hood to the intake flange on the service cover. Pre-cleaner inlet hoods are featured in the accessories section.*

**FLOW**

**Air in the End, Out the Side** (reverse flow filters)

### When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at right. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

**NOTES:**  
3 = Shipped with air cleaner initially

SM = Scheduled Maintenance  
ES = Extended Service  
HE = High Efficiency

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

## 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule. Restriction indicators, mounted on the air cleaner system are recommended for keeping an eye on restriction levels and indicating when servicing is due.

## 2 Remove the Filter

Unfasten or unlatch the service cover.

Because the filter fits tightly over the outlet tube to create the critical seal, there will be some initial resistance, similar to breaking the seal on a jar. Gently move the end of the filter back and forth to break the seal. Rotate while pulling the filter straight out. Avoid knocking the filter against the housing.

## 3 Check the Vacuator™ Valve

If your air cleaner is equipped with a Vacuator Valve, visually check and physically squeeze it. Make sure the valve is flexible and not inverted, damaged or plugged.

## 4 Inspect the Old Filter

Inspect the old filter for any signs of leaks. A streak of dust on the clean side of the filter is a telltale sign. Eliminate any source of air leaks before installing the new primary filter.

## 5 Clean Both Surfaces of the Outlet Tube

Use a clean damp cloth to wipe the filter sealing surface and the inside of the outlet tube. Contaminant on the sealing surface could hinder an effective seal and cause leakage.

*Continued on next page*

### 6

#### Inspect the New Filter

Visually inspect the new filter, paying special attention to the sealing area which is inside the open end. As you inspect the filter's RadialSeal™ take care not to wipe the sealing surface. The factory has placed a dry lubricant on the seal which aids in installation and removal.

NEVER install a damaged filter.

### 7

#### Insert the New Filter

Seat the filter by hand, making certain it is completely inserted into the air cleaner housing before securing the cover in place. To complete a tight seal, apply pressure by hand at the outer rim of the filter, not the flexible center. Never use the service cover to push the filter into place since no cover pressure is required to hold the seal.

Note that a cover gasket is usually supplied with ERA replacement filters. It is important that it be fitted at the same time as the new filter to ensure that the housing is airtight.

Using the cover to apply pressure could damage the housing and cover fasteners, and will void the warranty. If the new filter is not fully in place, remove the cover and push the filter further into the air cleaner with hand pressure on the outer rim. The cover should then go on with no extra force. Then, secure the service cover.

### 8

#### Check Connectors for a Tight Fit

Make sure restriction indicators are reset and in proper working order. Verify that all mounting bands, clamps, bolts, and connections in the entire air cleaner system are tight. Check for holes in piping and repair or replace as needed. Any leaks in the intake piping will admit dust directly to the engine.

**FLOW** **A** Air in the End, Out the Side

Because of the cone-shaped filter inside the housing, EBA Konepac™ is smaller in size compared to the ERA without sacrificing airflow. This allows trucks to meet width requirements in all states.

Picture of A112018 air cleaner with service cover on the opposite end of the inlet.

**Applications**

- Light-dust, single-stage air cleaner
- Typically mounted horizontally, underhood.

**When Selecting an Air Cleaner . . .**

Service parts for this axial style air cleaner may not be available due to newer filtration technology and housing designs. Donaldson now recommends RadialSeal™ style air cleaners for new applications.

If you do prefer this air cleaner style, please use the air cleaner selection steps outlined on the inside cover to determine which air cleaner is best for your engine.

**Initial Airflow Restriction**

ES= Extended Service  
HE= High Efficiency

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Measure the restriction of the air cleaner with a Donaldson filter service indicator, service gauge, or a water manometer.

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

### 2 Gently Remove the Old Filter

Switch the engine off. Handle the dirty filter gently, until it is clear of the air cleaner housing. Accidental bumping will shake dirt loose inside the filter housing.

### 3 Clean the Inside of the Housing

Always clean the inside of the housing. Dirt left in the air cleaner housing can potentially damage your engine.

Use a clean, damp cloth to wipe every surface clean. Ensure that the outlet tube sealing area is clean and undamaged.

### 4 Check the Inside Visually Before Installing the Filter

Always clean the gasket sealing surface. An improper gasket seal is one of the most common causes of engine contamination. Make sure that all hardened dirt ridges are completely removed, both on the bottom and top of the air cleaner housing.

Check for uneven dirt patterns. Your old filter has valuable clues to dust leakage or gasket sealing problems. A pattern on the filter's clean side is a sign that the old filter was not firmly sealed or that a dust leak exists. Identify the cause of that leak and rectify it before installing a new filter.

## 5 Inspect the New Filter Before Installation

Check the new filter, but don't install it if it appears damaged. Check that the gasket is easily compressible and springs back promptly when finger pressure is released.

## 6 Install the New Filter

It is important to change the new supplied cover gasket with each filter service. Ensure that the filter is the correct size for the housing and install the filter, making sure the gasket seats evenly for a perfect seal. Without a proper seal, dirty air can by-pass the filter.

## 7 Ensure Air-tight Fit on All Connections and Ducts

Check that all clamps and flange joints are tight, as well as the air cleaner mounting bands. Attend to any leaks immediately to avoid dirt directly entering your engine. If the vehicle is fitted with air brakes, it is important to check the clean air supply hose which feeds the air brake compressor.

## High Airflow in Compact Size for Horizontal Installation

### Upgrade Path

To upgrade, consider the Donaldson EPG air cleaner or PSD air cleaners that use newer filtration technologies.

### Applications

- Airflow range 775 to 1600 cfm airflow throughput per air cleaner
- Horizontal installation, side inlet
- Over-highway trucks: horizontal under hood or behind cab
- Buses: under hood

### Air Cleaner Features

- Relatively small air cleaner with high airflow
- Designed for horizontal installation with side inlet
- Housing is metal and coated with a corrosion and chemical resistant polymer paint
- Direct engine mounting is not recommended due to excessive engine vibration
- All models have service access cover opposite the outlet end of the air cleaner

### Filter Features

- Cone shaped filters, which we call Konepac, allow maximum media in a small package (one filter is shipped with each air cleaner)
- Other filter performance options available (see service parts lists for specifics)

The latched service cover on the ECG Konepac allows for easy access to the filter for change out.

*ECG Konepac with Latched Service Access*  
**Left:** a standard media filter, which is available with either standard or carbon-resistant media. **Middle:** the ECG Konepac™ metal air cleaner housing. **Right:** an extended service filter

*ECG Konepac with Perforated Inlet — an alternative to disposable style housings.*  
 You'll get the economy of replacing the filter instead of the entire unit each time. The perforated inlet on the side of this G112417 housing (middle) is the same as the disposable's, so conversion is direct and easy. **Left:** Extended service filter. **Right:** Filter designed for scheduled maintenance.

**FLOW** **G** **Air in the Side, Out the End** (standard flow filters)

**When Selecting an Air Cleaner ...**

Service parts for this axial style air cleaner may not be available due to newer filtration technology and housing designs. Donaldson now recommends one of two other families — the EPG or PSD.

**Initial Airflow Restriction**

ECG style air cleaners have three cover latches that need to perform correctly to ensure the filter gasket is sealing properly. These latches should be checked for tightness and wear. To check

for tightness, close all three latches, then open and close them one at a time. There should be good tension and they should snap tightly when closed. If any latches seem loose or rattle, they should be replaced.

ES = Extended Service  
HE = High Efficiency

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Check the restriction of the air cleaner with a Donaldson filter service indicator, service gauge, or a water manometer.

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

### 2 Gently Remove the Old Filter

Switch the engine off. Handle the dirty filter gently, until it is clear of the air cleaner housing. Accidental bumping will shake dirt loose inside the filter housing.

### 3 Clean the Inside of the Housing

Always clean the inside of the housing. Dirt left in the air cleaner housing can potentially damage your engine.

Use a clean, damp cloth to wipe every surface clean. Ensure that the outlet tube sealing area is clean and undamaged.

### 4 Visually Check the Inside Before Fitting the New Filter

Always clean the gasket sealing surface. An improper gasket seal is one of the most common causes of engine contamination. Make sure that all hardened dirt ridges are completely removed, both on the bottom and top of the air cleaner housing.

Check for uneven dirt patterns. Your old filter has valuable clues to dust leakage or gasket sealing problems. A pattern on the filter's clean side is a sign that the old filter was not firmly sealed or that a dust leak exists. Identify the cause of that leak and rectify it before installing a new filter.

## 5 Inspect the New Filter Before Installation

Check the new filter but don't install it if it appears damaged. Check that the gasket is easily compressible and springs back promptly when finger pressure is released.

## 6 Install the New Filter

It is important to change the new supplied cover gasket with each filter service. Ensure that the filter is the correct size for the housing and install the filter, making sure the gasket seats evenly for a perfect seal. Without a proper seal, dirty air can by-pass the filter.

## 7 Ensure Air-tight Fit on All Connections and Ducts

Check that all clamps and flange joints are tight, as well as the air cleaner mounting bands. Attend to any leaks immediately to avoid dirt entering your engine directly. If the vehicle is fitted with air brakes, it is important to check the clean air supply hose which feeds the air brake compressor.

## Air in the Side, out the End (standard flow filters)

### When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table below. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

When servicing the EBB, make sure to replace the cover gasket when changing filters.

### Initial Airflow Restriction

Air Cleaner Model	CFM @ "H <sub>2</sub> O		
	6"	8"	10"
B120271	620	730	800
B140044	900	1050	1320
B160049	1360	1530	1640

### EBB Specifications

NOTE: All EBB Air Cleaners are tapped to accept a filter service indicator

ES = Extended Service  
HE = High Efficiency  
SM = Scheduled Maintenance

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Check the restriction of the air cleaner with a Donaldson filter service indicator, service gauge, or a water manometer.

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

### 2 Gently Remove the Old Filter

Switch the engine off. Handle the dirty filter gently, until it is clear of the air cleaner housing. Accidental bumping will shake dirt loose inside the filter housing.

### 3 Clean the Inside of the Housing

Always clean the inside of the housing. Dirt left in the air cleaner housing can potentially damage your engine.

Use a clean, damp cloth to wipe every surface clean. Ensure that the outlet tube sealing area is clean and undamaged.

### 4 Check the Inside Visually Before Installing the Filter

Always clean the gasket sealing surface. An improper gasket seal is one of the most common causes of engine contamination. Make sure that all hardened dirt ridges are completely removed, both on the bottom and top of the air cleaner housing.

Check for uneven dirt patterns. Your old filter has valuable clues to dust leakage or gasket sealing problems. A pattern on the filter's clean side is a sign that the old filter was not firmly sealed or that a dust leak exists. Identify the cause of that leak and rectify it before installing a new filter.

## 5 Inspect the New Filter Before Installation

Check the new filter but don't install it if it appears damaged. Check that the gasket is easily compressible and springs back promptly when finger pressure is released.

## 6 Install the New Filter

It is important to change the newly supplied cover gasket with each filter service. Ensure that the filter is the correct size for the housing and install the filter, making sure the gasket seats evenly for a perfect seal. Without a proper seal, dirty air can by-pass the filter.

## 7 Ensure Air-tight Fit on All Connections and Ducts

Check that all clamps, flange joints and air cleaner mounting bands are tight. Attend to any leaks immediately to avoid dirt entering your engine directly. If the vehicle is fitted with air brakes, it is important to check the clean air supply hose that feeds the air brake compressor.

### Reset the Indicator

If your system has a remote indicator, don't forget to reset it after filter service.

### Powerful Two-Stage Filtration for Diesel Engines Operating in Medium to Heavy Dust Conditions

The air cleaners featured in this section offer reliable two-stage filtration designs that have been proven by years of service in medium dust environments such as light construction, mining, agriculture, trucks, gen sets, compressors and industrial applications.

#### Looking for FHG or FWG Air Cleaner Families?

These old air cleaner families are being phased out of our product offering. To help you transition from these older air cleaner designs to newer designs with improved filtration technology, the upgrade tables below will guide you to a newer air cleaner housing (or family) that is a close match to the older model. See the service parts section for available parts for older air cleaner housings. If you need help to upgrade, contact Donaldson. See back cover for contact information.

#### Upgrade FHG to FPG or FRG

**If you're looking for a new two-stage air cleaner, check out the PowerCore Air cleaner section first!**

**PowerCore**  
A Donaldson Filtration Technology

## Smaller, Lightweight Alternative Two-Stage Air Cleaner Designed for horizontal installation

The FKB series is a family of two-stage air cleaners for medium dust conditions.

Compared to other air cleaner styles, this new air cleaner family delivers the performance of competitive larger air cleaners in a compact, rugged design.

With heavy-duty plastic construction and non-metal filters, the air cleaner is lighter, more efficient, and easier to install and replace than competing products.

Another key design feature is the built-in mounting brackets. There's no need for additional mounting support.

The two-stage design features a built-in pre-cleaner that separates up to 85% of airborne contaminants.

*FKB air cleaners are smaller in diameter compared to competitive brands with similar airflow.*

Cummins and Fleetguard are registered trademarks of Cummins Filtration, Inc. Mann+Hummel is a registered trademark of Mann+Hummel GMBH

The FKB's plastic housing and durable construction enables installation in all types of operating environments and temperature ranges from -40 °C to 82 °C, operating in medium-dust conditions with engine air flow from 70 to 207 cfm (2 to 5.9 m3/min).

FKB air cleaners effectively reduce contaminants flowing into the air intake system, provide a high level of engine protection from harmful contaminants and increase engine performance and fuel efficiency.

The air cleaner models ship with both the primary and safety filters.

## Built-in Mounting Brackets and Filter Indicator Port Easy to service with non-metal filters

### Applications

- Off-road equipment operating in medium-dust conditions with engine airflow range of 70 to 207 cfm (2 to 5.9 m<sup>3</sup>/min)
- Installs horizontally. Mounting the air cleaner directly to the engine is not recommended; excessive engine vibration can cause premature air cleaner structural failure
- Sustained temperature tolerance: -40 °F to 180 °F / -40 °C to 82 °C. Do not install next to components that exceed the maximum temperature (180 °F / 82 °C); like a turbocharger, muffler, exhaust pipe or other high temperature component

### Air Cleaner Features

- Smaller in diameter compared to competitive brands with similar airflow
- Improved handling and maintenance — lighter and smaller, changing filters is a snap
- Product design includes:
  - primary filter
  - safety filter
  - filter service indicator port
- Improved filter disposal ease — no metal
- Cover latch position allows for minimum service clearance and eases filter service
- Built-in mounting brackets in air cleaner body eliminate need for mounting bands

Filter change-out is a snap with minimal service clearance required

Cover latch position requires minimum space requirement for filter service

## Air in the Side, out the End (standard flow filters)

### When spec'ing an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at right. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, pre-cleaners, etc.

### Initial Airflow Restriction

**NOTES:**  
3 = Shipped with air cleaner initially

## Installation Recommendations

- Shut off your engine.
- Air cleaner orientation is horizontal, with the drop tube pointing down — within +/- 15°. For service clearance, allow the entire length of the filter for removal and 35mm for service cover latches.
- Mounting is M8 x 1.25, with a maximum torque of 15 ft•lb.
- Connections: Inlet/Outlet maximum torque 40 in•lb. Indicator port maximum torque 1.5 ft•lb.
- **Inlet accessory note:** The air cleaner housing can accommodate a lightweight inlet hood, but not a pre-cleaner or any other accessory. Use of an unapproved intake accessory will void your Donaldson warranty.

**This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.**

## 1 Check the Restriction

Measure the restriction of the air cleaner with a Donaldson filter service indicator, service gauge, or a water manometer. Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

## 2 Clean out the Vacuator™ Valve

Remove the Vacuator Valve and clean out any dust found in the drop tube. Reinstall Vacuator Valve or replace it if it is worn or damaged.

## 3 Remove the Primary Filter

Unlatch and remove the service cover on the FKB air cleaner.

To remove the primary filter, press and rotate the filter counter-clockwise until free. Then extract the primary filter by slowly pulling it out of the housing.

*Note: Avoid dislodging contaminant from the filter as it is removed from the air cleaner housing.*

*Continued on next page*

### 4 Remove the Safety Filter or Liner

Next remove the safety filter (replace at every third primary filter change) or support liner by pulling it straight out. This allows necessary access to properly clean the primary filter's seal surface.

Inspect the seal surface and housing for any damage. Replace the complete air cleaner if damage is present.

It is not necessary to replace the support liner unless it is damaged. If you are reusing the safety filter keep it clean while servicing the housing to avoid contamination.

*Note: If a safety filter or liner is not present, check to see if it has attached itself to the inside of the primary filter during removal.*

*To properly service this small diameter air cleaner, you will need to remove the safety filter or liner upon each filter service.*

### 5 Clean the Inside Surface

Block the outlet tube of the air cleaner using a small dampened towel prior to cleaning the seal and locking surfaces to avoid contaminating the induction system.

With a clean damp cloth, thoroughly clean the inside surface of the housing, seal and lock surfaces.

*Note: Failure to clean the inside surface may cause contaminants to be introduced to the outlet tube or onto the seal area of the primary filter during reinstallation resulting in a leak for dirty air.*

### 6 Inspect the New Filters

Inspect the new primary and safety filters for any damage, voids, cuts, tears, or indentations in the media or urethane sealing surfaces.

### 7 Install the Safety Filter

Remove the dampened towel from the outlet tube that was used to protect the induction system during servicing. Install the safety filter or support liner by pressing it firmly in place until seated. When properly fitted, it should fit snugly inside the outlet tube.

## 8 Install the Primary Filter

Install the new primary filter by pressing and rotating the filter clockwise until fully fitted against the stop.

*Note: If you perform filter maintenance service on a schedule vs. using service indicators, you may want to write the service date on the filter end cap.*

Close-up of Filter Stop

## 9 Fasten the Service Cover

The "INLET" arrow on the cover should line up with the air cleaner inlet.

Do not force the cover onto the air cleaner. It should go on easily with no extra force.

Re-fasten the latches which secure the cover. Make sure that latches penetrate the slots in both the body and the cover.

*Note: If the cover does not fit flush to the body, the primary filter is not properly seated in the housing. Recheck the primary and safety filter installation following the proper installation procedure so they become fully seated.*

## 10 Reset the Filter Indicator and Inspect the Air Cleaner System

If your system has a restriction indicator, reset the device.

Inspect and torque all clamps, bolts and connections in the entire air intake system. Check for holes in piping, and repair if needed.

## Compact, RadialSeal™, Medium-Duty Air Cleaner Designed for Horizontal Installation

*Donaldson XRB air cleaners are built with Donaldson technologies.*

The XRB air cleaner family is smaller in size compared to competitive models with similar airflow operating ranges.

XRB air cleaners effectively reduce contaminants flowing into the air intake system, provide a high level of engine protection from harmful contaminants and increase engine performance and fuel efficiency.

The XRB's plastic housing and durable construction enables installation in all types of operating environments and temperature ranges from -40 °F to 180 °F / -40 °C to 82 °C, operating in medium-dust conditions with engine airflow from 265 to 630 cfm.

The B080080 has non-metal primary and safety filters. The primary filters for the B100127 and B120420 have metal outer liners. The air cleaner models ship with both the primary and safety filters.

Like our FKB and PSD models, these air cleaners feature built-in mounting brackets. There's no need for additional mounting support.

*Built-in mounting brackets on air cleaner body eliminate the need for mounting bands.*

*Cover latch position allows for minimum service clearance and eases filter service.*

*Air cleaners are equipped with the Donaldson Vacuator™ Valve.*

## Built-in Mounting Brackets and Filter Indicator Port Easy to Service with Non-metal Filters

### Applications

- On- and off-road equipment operating in medium-dust conditions with engine airflow range of 255 to 630 cfm (7.5 to 17.8 m<sup>3</sup>/min)
- Installs horizontally. Mounting the air cleaner directly to the engine is not recommended; excessive engine vibration can cause premature air cleaner structural failure.
- Sustained temperature tolerance: -40 °F to 180 °F / -40 °C to 82 °C. Do not install next to components that exceed the maximum temperature (180 °F / 82 °C) like a turbocharger, muffler, exhaust pipe or other high temperature component

### Air Cleaner Features

- Smaller in diameter compared to competitive brands with similar airflow
- Improved handling and maintenance — lighter and smaller, changing filters is a snap
- Product design includes:
  - primary filter
  - safety filter
  - filter service indicator port
- Cover latch position allows for minimum service clearance and eases filter service
- Built-in mounting brackets on air cleaner body eliminate the need for mounting bands

Primary and safety filters for XR B housings.

### Installation Recommendations

- Air cleaner orientation is horizontal, with the drop tube pointing down — within +/- 15°. For service clearance, allow the entire length of the filter for removal and 1.38" (35mm) for service cover latches.
- Mounting is M8 x 1.25, with a maximum torque of 15 ft•lb.
- Connections: Inlet/Outlet maximum torque 40 in•lb.
- **Inlet accessory note:** The air cleaner housing can accommodate a lightweight inlet hood, but not a pre-cleaner or any other accessory. Use of an unapproved intake accessory will void your Donaldson warranty.
- Filter Service Indicator port arrives with plug/cap. Order filter service indicator separately. See accessories section. Indicator port maximum torque 1.5 ft•lb.

**NOTES:**  
3 = Shipped with air cleaner initially

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

## 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

## 2 Clean out the Vacuator™ Valve

Remove the Vacuator Valve and clean out any dust found in the drop tube. Reinstall Vacuator Valve or replace if it is worn or damaged.

## 3 Remove Service Cover

Unlatch and remove the service cover on the air cleaner to access the filters.

## 4 Remove the Primary Filter

The primary filter makes such a tight seal, that you will encounter some initial resistance, similar to breaking the seal on a jar. To break the seal, grab the end of the filter and gently move the filter from side-to-side and pull it out of the housing.

*Application Note: Avoid dislodging contaminant from the filter when it is removed from the air cleaner housing.*

Continued on next page

### 5 Remove the Safety Filter

Replace the safety filter with every third primary filter change unless excessive dust has settled on it during servicing. If you are reusing the safety filter keep it clean while servicing the housing to avoid contamination.

Remove the safety filter by pulling it straight out — giving you easy access to properly clean the primary filter's seal surface.

Block the outlet tube of the air cleaner, using a small dampened towel, prior to cleaning the seal surface to avoid contaminating the induction system.

*If a safety filter is not present, check to see it has attached itself to the inside of the primary filter during removal. Inspect the seal surface and housing for any damage. Replace the complete air cleaner if damage is present.*

### 6 Clean the Inside Surface

With a second clean damp cloth, thoroughly clean the inside of the housing and seal surface.

*Failure to clean the surface may cause contaminants to be introduced to the outlet tube or onto the seal area of the primary filter during reinstallation, resulting in a dirty air leaks.*

### 7 Inspect the Primary and Safety Filters

Inspect new filters for any damage, voids, cuts, tears or indentations in the media or urethane sealing surface. If the filter is damaged, do not install.

### 8 Install the Safety Filter

Remove the dampened towel from the outlet tube that was used to protect the induction system during servicing.

Install the safety filter by pressing it firmly in place until seated. When properly fitted it should fit snugly inside the outlet tube.

## 9 Install the Primary Filter

Install the new primary filter by gently sliding it over the safety filter and pressing it into place until fully seated. When installing, apply pressure by hand at the outer rim of the filter, not in the center, to complete a tight seal. Continue pushing the filter into the outlet tube until it stops. The critical sealing area will compress slightly, adjust itself, and distribute the sealing pressure evenly.

*If you perform filter maintenance service on a schedule versus using service indicators, you may want to write the service date on the filter end cap.*

## 10 Fasten the Service Cover

Replace the service cover, with the "INLET" arrow lined up with the air cleaner inlet. Do not force the cover onto the air cleaner or use the service cover to push the filter into place.

Refasten latches to secure the cover and make sure that the latches penetrate the slots in both the body and the cover.

*If the cover does not fit flush to the body, the primary filter is not properly seated in the housing. Recheck the primary and safety filter installation, following the proper installation procedure so they become fully seated. The cover will then go on easily. Using the cover to push the filters could cause damage to the housing and will void the warranty.*

## 11 Inspect the Air Cleaner System

Inspect and torque all clamps, bolts and connections in the entire air intake system. Check for holes in piping and repair if needed.

Reset the filter service indicator if applicable.

## Advanced Sealing Technology in Compact Two-Stage Design For the Most Reliable Engine Protection

The FPG Air Cleaner series is a two-stage engine air cleaner operating in medium to heavy dust conditions. The FPG series offers improved reliability and durability with reduced weight and costs.

Ever since Donaldson developed the first air cleaner in 1915, we have worked closely with original equipment manufacturers to provide filtration solutions to meet changing design and specification requirements for diesel engines.

Because they are made of injection molded high-strength plastic, FPG air cleaners offer the flexibility to overcome space limitations for underhood air cleaners. Donaldson employs innovative plastic materials and production techniques that result in air cleaners that are corrosion-free and lighter in weight than traditional metal air cleaners — yet without sacrificing sturdiness. Our extensive vibration testing reveals this to be a more durable design than most metal air cleaners.

The filter inside the air cleaner is also quite different from the traditional design: one-piece molded urethane endcaps encase the ends of the media and filter liners, eliminating the metal caps and plastisol potting compound that were traditionally used. The glued-on gasket found on Axial filters is gone — now, the inside surface of the open end is actually the RadialSeal™ sealing surface.

*Despite its compact size, the FPG Air Cleaner offers complete engine air protection — removing 99.9% of the dust and dirt particulate that enters the engine airstream.*

*FPG and FPG Alexin™ Air Cleaners, with RadialSeal™ Sealing Technology, provide thorough two-stage cleaning of incoming engine air on industrial and construction vehicles operating in medium to heavy dust environments.*

## Small, Durable and Corrosion-Free The Easiest Air Cleaner to Service!

### Applications

- Provides up to 346 cfm airflow per air cleaner — double throughput by using two units
- Installation can be horizontal, vertical, or even at an angle (as long as Vacuator™ Valve points down)
- Temperature tolerance: 180 °F / 83 °C sustained (Do not install next to turbocharger, muffler, exhaust pipes, or other high-temp component.)

### Ideal for

- Compressors and generator sets
- Construction and in-plant vehicles
- On- and off-highway vehicles
- Marine and offshore equipment

### Air Cleaner Features

- Easy to service. No tools needed. Usually done in 5 minutes or less.
- Durable plastic housing — corrosion-free and lightweight
- Two-stage air filtration. Built-in, tangential pre-cleaner ahead of primary filter removes up to 85% of incoming dust.
- Choose 90° or straight outlet to fit your application.
- Easy-to-fasten latches retain dust cup/cover. Four (larger) models have twist-off cover.
- Tapped to accept filter service indicator.
- A plastic inlet hood and stack (up to 18" / 457mm tall) may be added.

### Filter Features

- Filters have RadialSeal™ Sealing Technology that creates a reliable, critical seal and makes servicing easy.
- One piece, molded urethane endcaps encase the filter media and liners.
- Safety filter protects engine during in-field filter change outs. All FPG models can accept safety filters. Specification table shows which air cleaner models ship with a safety filter installed.

FPG Alexin™ 9" / 242 mm and 10" / 262mm dia. models available with the twist-off cover design

## When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at right. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

### Application Notes

- 1) Safety filters: All FPG models can accept safety filters. This table shows which air cleaner models are shipped with a safety filter installed. If you want to add a safety filter to an existing model that did not originally have one, order the safety filter listed in the Service Parts table.
- 2) Mounting band specifications and ordering information are on next page.
- 3) Inlet Hoods: A plastic inlet stack up to 18" (457mm) tall may be added, supporting a plastic inlet hood. See the Accessories section for information on optional inlet hoods and filter service indicators. Warning: Do not add a pre-cleaner or any intake accessory other than a lightweight inlet hood. Use of unapproved intake accessories will void your Donaldson warranty.
- 4) Service Indicators. See the Accessories section for information on filter service indicators.

## Mounting Bands Designed Exclusively for the FPG Series

**WARNING:** Do not use any other mounting bands or straps with FPG air cleaners. Use of an unapproved mounting band voids warranty.

### Polymer Mounting Band

The one-piece, high tech polymer mounting band will securely hold the housing in position. The band has tabs on the inside circumference which fit exactly into notches on the FPG housing. Donaldson polymer bands are completely non-corrosive, lightweight, easy to install, and economical.

The band tightens around the air cleaner when the base of the band is bolted to a support, providing a fixed, stable mounting — even in high vibration applications.

Use on G04 and G05 FPG Air Cleaners.

Use on G06-G10 FPG and Alexin Air Cleaners  
Bands have spring-loaded screws

### Metal Mounting Band

The metal mounting band has a spring-loaded bolt at the top to maintain a constant hold on the housing throughout high and low temperature extremes.

### Maximum Torque

Polymer Bands:  
11 lbs-ft / 14.8 N•m

Metal Bands:  
12 lbs-ft / 16.2 N•m

### Application Note:

To accommodate even hard-to-fit applications, polymer bands allow the air cleaner housings to be rotated and positioned at various increments, depending upon the size:

Housing Diameter	Increment
4.80" (122mm)	11°
5.75" (146mm)	10°
6.74" (171mm)	7.5°
7.19" (183mm)	7°
8.35" (212mm)	5°

### FPG Mounting Bands (Order one band per FPG air cleaner)

#### NOTES:

- 3 = Shipped with air cleaner initially
- 4 = Safety filter is designed to fit this air cleaner, but was not originally shipped with it (note that adding a safety filter will decrease the maximum airflow throughput)
- 8 = Cover assembly includes latches but no Vacuator™ Valve

\* = FPG Alexen models with twist off cover design (no latches)

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

## 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

## 2 Clean Out the Vacuator™ Valve

If your air cleaner is equipped with a Vacuator™ Valve, visually check and physically squeeze it. Make sure the valve is flexible and not inverted, damaged or plugged.

## 3 Remove the Primary filter

Shut off the engine. Unfasten or unlatch the service cover. For the FPG Alexin™ models, the cover is unlocked with a yellow "finger," twisted to the left and removed from the filter housing.

The RadialSeal™ filter fits tightly over the outlet tube and there will be some initial resistance, similar to breaking the seal on a jar. Gently move the end of the filter back and forth to break the seal, then rotate while pulling straight out. Avoid knocking the filter against the housing.

## 4 Visually Check the Safety Filter and Clean Both Surfaces of the Outlet Tube

If your air cleaner has a safety filter, visually check it while in place for signs of damage. Do not remove the safety filter unless it is damaged or due for replacement. Also verify that the safety filter is properly seated in the housing.

The safety filter should be replaced every three primary filter changes. Use a clean damp cloth to wipe both the filter sealing surface and the inside of the outlet tube. Ensure that the outlet tube sealing area is undamaged.

Contaminant on the sealing surface could hinder an effective seal and cause leakage. If the safety filter is to be replaced, avoid leaving the outlet tube exposed to the air. If there is to be a delay in installing the new safety filter, cover the air cleaner outlet tube to avoid admitting any dust.

*Continued on next page*

### 5 Inspect the Old Filter

Inspect the old filter for any signs of leaks. A streak of dust on the clean side of the filter is a telltale sign. Eliminate any source of air leaks before installing the new primary filter.

### 6 Inspect the New Filter

Inspect the new filter for any damage that may have occurred through mishandling. NEVER install a damaged filter. Visually check the inside of the open end, which is the sealing area.

Do not wipe the filter RadialSeal™ sealing area. Donaldson RadialSeal™ filters have an invisible dry lubricant on the seal to aid installation.

### 7 Insert the New Filter

First, if you're servicing the safety filter at this change-out, seat it properly into position before installing the primary filter. Insert new filters carefully. Seat the primary filter by hand, making certain it is inserted completely into the air cleaner housing. To complete a tight seal, apply pressure by hand at the outer rim of the filter, not the flexible center.

No cover pressure is required to hold the seal in place and you should NEVER use the service cover to apply pressure. This could damage the housing and fasteners and void the warranty. If the service cover presses against the filter before the cover is fully in place, remove the cover. With the cover off, push the filter farther into the air cleaner by hand and then the cover will go on with no extra force. Once the filter is in place, secure the service cover.

For FPG Alexin™ models, twist the cover to the right until it stops, then push the yellow "finger" in to lock.

*If you perform filter maintenance service on a schedule versus using service indicators, you may want to write the service date on the end cap of both filters.*

### 8 Check Connectors for Tight Fit

Make sure service indicators are reset and in proper working order. Check that all mounting bands, clamps, bolts, and connections in the entire air cleaner system are tight. Check for holes in piping and repair or replace as needed. Any leaks in the intake piping will admit dust directly to the engine. Reset the filter service indicator.

## Superior Protection for Larger Engines

### RadialSeal™ Sealing Technology Means Reliable Filtration and Quicker Service

The Donaldson two-stage FRG RadialSeal™ air cleaners provide improved reliability, better durability and reduced weight compared to axial seal style air cleaner designs. Choose from more than 20 air cleaners that work in airflow ranges of 82 to 1600 cfm.

#### Two-Stage Filtration

Both Style A and B have an integral pre-cleaning stage that separates up to 85% of the incoming dust. The primary filter stops the rest, resulting in engine air that is 99.99% free of dust.

*Donaldson FRG Air Cleaners and Duramax hydraulics filters deliver superior filtration to pump-and-engine rigs used in the oil and gas industry.*

*The two-stage FRG Air Cleaner in operation on a Prentice 490 Skidder.*

*The FRG Air Cleaner on this Tyler Ag Sprayer eliminates 99.99% of the dirt from the engine airstream, while providing up to 945 cfm airflow to the engine.*

## Durable, Vibration Resistant Variety of Sizes in Two Separate Housing Styles

### Applications

- Horizontal installation
- Medium and heavy dust environments
- **Style A** — From 82 to 795 cfm airflow throughput per air cleaner in body diameters ranging from 5" to 16" (127 – 406mm)
- **Style B** — From 270 to 1390 cfm airflow throughput per air cleaner in body diameters ranging from 10" to 18" (254 – 457mm)

### Ideal for

- Construction equipment
- Agricultural machinery
- Mining equipment
- Off-highway vehicles

### Air Cleaner Features

- Two-stage filter system: the first stage removes up to 85% of incoming dust
  - The first stage in the Style A uses the angled vanes on the primary filter
  - The first stage in the Style B has a tangential air inlet
- Inlet on side, outlet on end (G flow)
- Already tapped to accept filter service indicator
- Vacuator™ Valve automatically releases the pre-cleaned dust
- Durable, long-lasting finish
  - Style A housing is metal and coated with a black, corrosion- and chemical-resistant polymer paint (service cover is accessed with clamp and bolt)
  - Style B is comprised of two materials: injection molded, high strength polymer service cover and a metal body (the service cover is accessed by latches)
- Mounting the unit directly to the engine is not recommended; excessive engine vibration can cause premature air cleaner structural failure

#### FRG Style A

The FRG Style A series replaces Donaldson's obsolete FHG series in size and airflow capacity.

*While it looks like an axial seal air cleaner on the outside, this new style housing is equipped with a RadialSeal™ style primary filter and an optional safety filter. Easy to service; one wing-bolt clamp to undo to access filter(s).*

#### FRG Style B

The FRG Style B series replaces Donaldson's obsolete FTG series in size and airflow capacity.

*Injection-molded endcap, made of specially-engineered resins for high strength and durability, serves as the service cover. Filter change out is easier than ever — just unsnap the latches to access the filter.*

### Filter Features

The RadialSeal™ filter inside the air cleaner is also quite different from Axial filters. Its one-piece, molded urethane endcaps encase the filter media and liners, thereby reducing the number of components and increasing sealing reliability.

The inside surface of the filter's open end is the sealing surface, which eliminates the glued-on gasket found on the metal end cap of Axial filters. For added engine protection during filter service, consider a model with a safety filter.

### Accessories

Donaldson intake accessories for your FRG Air Cleaner can help overcome or prevent various problems. For instance:

- If the installed air cleaner will be exposed to rain, snow or debris, an **inlet cap** can prevent moisture ingestion.
- A **filter service indicator** measures the airflow restriction across the filter and indicates when to replace the filter (see Accessories section of this catalog).
- **Mounting bands** for FRGs must be ordered separately.

### FRG Mounting Bands

- Two mounting bands are required for proper FRG installation (see service parts listing in this section).
- Durable, corrosion resistant, galvanized steel construction.
- Engineered and tested to resist the adverse effects of vibration.
- Mounting band feet are designed to continuously ensure maximum torque pressure.
- Dimensional information for mounting bands can be found in the accessories section.

**When Selecting an Air Cleaner . . .**

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at right. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

### SERVICE PARTS NOTES:

- 2 = Two required for proper installation
- 3 = Shipped with air cleaner initially
- 7 = Included with each replacement filter
- 8 = Cover assembly includes latches, but no Vacuator Valve.

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

### 2 Remove the Primary Filter and check the Vacuator™ Valve

Shut off the engine. Unfasten or unlatch the service cover.

Because of its RadialSeal™, the filter fits tightly over the outlet tube and there will be some initial resistance, similar to breaking the seal on a jar. Gently move the end of the filter back and forth to break the seal then rotate while pulling straight out. Avoid knocking the filter against the housing.

If your air cleaner is equipped with a Vacuator™ Valve, visually check and physically squeeze it.

Make sure the valve is flexible and not inverted, damaged or plugged. Replace it if damaged or if it looks like any of these images. A damaged or missing vac valve will disrupt the designed flow of air through the air cleaner.

### 3 Visually Check the Safety Filter and Clean Both Surfaces of the Outlet Tube

If your air cleaner has a safety filter, visually check the safety filter in place for signs of damage. Do not remove the safety filter unless it is damaged or due for replacement. Also verify that the safety filter is properly seated in the housing.

The safety filter should be replaced every three primary filter changes. Use a clean damp cloth to wipe both the filter sealing surface and the inside of the outlet tube. Ensure that the outlet tube sealing area is undamaged.

Contaminant on the sealing surface could hinder an effective seal and cause leakage. If the safety filter is to be replaced, avoid leaving the outlet tube exposed to the air.

If there is to be a delay in installing the new safety filter, cover the air cleaner outlet tube to avoid admitting any dust.

## 4 Inspect the Old Filter

Inspect the old filter for any signs of leaks. A streak of dust on the clean side of the filter is a telltale sign. Eliminate any source of air leaks before installing the new primary filter.

## 5 Inspect the New Filter

Inspect the new filter for any damage that may have occurred through mishandling. NEVER install a damaged filter. Visually check the inside of the open end, which is the sealing area.

Do not wipe the filter RadialSeal™ area as the new Donaldson RadialSeal filter may have a dry lubricant on the seal to aid installation.

## 6 Insert the New Filter

First, if you're servicing the safety filter at this change-out, seat it properly into position before installing the primary filter. Insert new filters carefully. Seat the primary filter by hand, making certain it is inserted completely into the air cleaner housing. To complete a tight seal, apply pressure by hand at the outer rim of the filter, not the flexible center.

No cover pressure is required to hold the seal in place and one should NEVER use the service cover to apply pressure. This could damage the housing and fasteners and void the warranty. If the service cover presses against the filter before the cover is fully in place, remove the cover. With cover off, push the filter farther into the air cleaner by hand and then the cover will go on with no extra force. Once the filter is in place, secure the service cover.

Continued on next page

### 7 Check Inlet Hoods and Pre-Cleaners

Check any intake hoods and pre-cleaner devices during maintenance routines.

A missing inlet hood will significantly shorten filter life. If your unit had a hood or pre-cleaner originally, make sure you replace it. Check openings and tubes on pre-cleaners to make sure they are not plugged. Replace any units that are damaged. Damaged or dented units will not operate properly.

### 8 Check Connectors for Tight Fit

Make sure service indicators are reset and in proper working order.

Check that all mounting bands, clamps, bolts, and connections in the entire air cleaner system are tight.

Check for holes in piping, and repair or replace as needed.

Any leaks in the intake piping will admit dust directly to the engine.

## Under Hood Mount, Two-Stage Filtration For Large Construction & Mining Equipment

The FTG Cycloflow™ Air Cleaner is another two-stage air cleaner with a built-in pre-cleaner. This air cleaner has axial seal style filters. The FTG is typically mounted under hood with the service cover on the outside for access.

### Applications

- Allows 32-59 m<sup>3</sup>/min. airflow throughput per air cleaner
- Horizontal installation
- Sustained temperature tolerance: to 82 °C

### Ideal for

- Large industrial and construction equipment: crawler tractors, crane loaders, excavators and air compressors with large engines operating in severe dust environments
- Agricultural machinery
- Mining equipment
- Oil and gas hydraulic fracturing (fracking) equipment
- Off-highway vehicles

### Air Cleaner Features

- Unique, flared inlet allows maximum airflow with low restriction
- 21" body diameter
- Two-stage filter system — the first stage removes up to 85% of incoming dust with a tangential air inlet
- Inlet on side, outlet on end (G flow)
- Already tapped to accept filter service indicator (1/8"-27 NPT male)
- Safety filter protects engine inlet during filter change out
- Vacuator™ Valve automatically releases the pre-cleaned dust
- Housing is metal and coated with a black, corrosion- and chemical-resistant polymer paint
- Mounting the unit directly to the engine is not recommended; excessive engine vibration can cause premature air cleaner structural failure

### Accessories

- Mounting bands (order separately).
  - If the installed air cleaner will be exposed to rain, snow or debris, an **inlet cap** can prevent moisture ingestion.
  - A **service indicator** measures the airflow restriction across the filter, thereby showing how much useful life the filter has left and when to replace the filter (see Accessories section of this catalog).
- Note:* Outlet tapped to accept filter service indicator (1/8"-27 NPT male).

**Air in the Side, Out the End** (standard flow filters)

**When Selecting an Air Cleaner . . .**

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table below. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

The only difference in these two models is the position of the inlet on the air cleaner body. For location and dimensions, see details on next page.

**Initial Airflow Restriction**

Airflow CFM @ H <sub>2</sub> O			Air Cleaner Models	Weight	
6"	8"	10"		lbs	kg
1465	1680	1870	G210007 / G210010	88	40

**FTG Service Parts**

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Check the restriction level of the air cleaner filter service indicator. Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer or on a regular service schedule.

### 2 Clean Out the Vacuator™ Valve

Remove the Vacuator Valve and clean out any dust found in the drop tube. Reinstall Vacuator Valve or replace if found worn or damaged.

Make sure the valve is flexible and not inverted, damaged or plugged. Replace it if damaged or if it looks like any of these images. A damaged or missing Vacuator Valve will disrupt the designed flow of air through the air cleaner.

### 3 Gently Remove the Old Filter

Shut off the engine. Loosen and retain the wing nut bolt, remove bolt and washer. Replace both if damaged or worn.

Using the metal handle, pull the dirty filter gently from the housing. Accidental bumping will shake dirt loose inside the filter housing.

### 4 Visually Check the Safety Filter

Visually check the safety filter without removing it. Replace if damaged or every three primary filter changes. Also verify that the safety filter is properly seated in the housing.

If the safety filter is to be replaced, it should be done immediately or the clean air outlet should be sealed. Use a clean cloth to avoid contaminant being introduced to the engine during service.

## 5 Always Clean the Inside of the Housing

Dirt left in the air cleaner housing is harmful to your engine. Use a clean, damp cloth to wipe the inside of the housing before fitting the new filter.

Block the outlet tube of the air cleaner with a small dampened towel prior to cleaning the seal surface to avoid contaminating the induction system.

## 6 Clean the Gasket Sealing Surfaces

An improper gasket seal is one of the most common causes of engine contamination. Make sure that all hardened dirt ridges are completely removed, both on the bottom and top of the air cleaner housing.

## 7 Inspect Your Old Filter and Check for Uneven Dirt Patterns

Your old filter has valuable clues to dust leakage or gasket sealing problems. A dust pattern on the filter's clean side is a sign that the old filter was not firmly sealed or that a dust leak exists. Identify the cause of any leak and rectify it before installing a new filter.

## 8 Inspect New Filters

Before installing the new filters, visually inspect them for shipping damage and gasket integrity. If a filter is damaged, do not install it. If desired, write the date of the filter change on the outer end of the filter end cap.

## 9 Install the New Filters

First, if you're servicing the safety filter at this change-out, seat it properly into position before installing the primary filter. Insert new filters carefully over the center bolt, hand tighten wing nut bolt for both filters.

Make sure the primary filter gasket seats evenly to create a proper seal. If you don't have a good seal, dirty air can by-pass the filter.

## 10 Ensure an Air-tight Fit on all Connections and Ducts

Check that all clamps and flange joints are tight, as well as the air cleaner mounting bolts. Attend to any leaks immediately to avoid dirt entering your engine directly. Reset the filter service indicator.

## Horizontal Mount, Integral Vacuator™ Valve

### Severe Duty, Two-Stage Filtration for Large Construction & Mining Machines

#### Applications

- Allows up to 1200 cfm airflow throughput per air cleaner
- Horizontal installation
- Designed for large industrial and construction machines — crawler tractors, crane loaders, excavators, and air compressors with large engines operating in severe dust environments

#### Air Cleaner Features

- Unique, flared inlet allows maximum airflow with low restriction
- 21" body diameters
- Two-stage air cleaning deals with very dusty environment:
  - (1) Built-in louver spins air to separate up to 85% of incoming dust before it reaches the filter
  - (2) Primary filter removes up to 99.99% of the remaining dust
- Built-in Vacuator™ Valve collects and releases pre-cleaned dust
- Safety filter on all models protects engine inlet during primary filter change out
- Housing is metal and coated with a corrosion and chemical resistant polymer paint

#### Filter Features

- Replacement filter choices include an extended service, high efficiency filter for restriction maintenance, or a standard life filter for scheduled maintenance

#### Accessories

- See the Accessories section for details on Donaldson air intake add-ons that can enhance the performance of your system
- Each FVG is tapped to accept a filter service indicator
- Order mounting bands, hoods, and other accessories separately

*FVG air cleaners are used in tandem on this underground mining equipment to double the airflow throughput to the engine.*

**Air in the Side, Out the End** (standard flow filters)

**When Selecting an Air Cleaner . . .**

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table below. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

**Initial Airflow Restriction**

CFM	@ "H <sub>2</sub> O		Air Cleaner Model
	6"	8"	
690	810	910	G140195
730	880	1000	G160376
930	1070	1200	G160587

Looking for a different air cleaner with newer Donaldson technologies? Check out the FRG Air Cleaners. This line has models that cover this airflow range.

# Donaldson Delivers Innovative Filtration Solutions for Engines, Equipment and the People Who Use Them

## Fuel Filtration

Expanded line of fuel filters protect engine components and extend equipment life.

- Includes a full complement of filters to fit Stanadyne® and Racor® fuel systems, and Cummins® engines.
- Twist&Drain™ valves turn the complicated task of removing water into an easy process.

Stanadyne® is a registered trademark of Stanadyne Corporation. Racor® is a registered trademark of Parker Hannifin Corporation. Cummins® is a registered trademark of Cummins Inc.

## Lube Filtration

Donaldson lube filters keep engine oil clean by capturing contaminants that can cause engine damage.

- With coverage for a full range of popular engines, Donaldson lube filters meet or exceed application requirements.
- Donaldson Endurance™ lube filters — with Synteq™ media — deliver improved lubricant flow, improved cold start performance and a higher level of engine protection to prolong engine and equipment life.

## Hydraulic and Transmission Filtration

- Offering a broad line of spin-on, cartridge-style and in-tank hydraulic filters — including high, medium and low pressure options — that protect transmissions, machinery and components in hundreds of applications.
- A complete line of hydraulic accessories to accommodate virtually any mobile application.
- T.R.A.P.™ breather technology
- Donaldson Duramax® filters are the highest rated medium pressure filters available.

**DURAMAX®**

## Coolant Filtration

- Donaldson coolant filters remove contaminants and maintain cooling system balance — keeping today's hot-running engines cool and reducing downtime.
- Donaldson Endurance™ coolant filters allow you to extend filter life while maintaining coolant condition.

## Mufflers & Exhaust Accessories

- For more than 60 years, Donaldson has been a leading supplier of exhaust systems, components and accessories for medium- and heavy-duty diesel powered trucks and equipment.

### Heavy-Duty Two-Stage Filtration for Diesel Engines Operating in Severe Dust Conditions

Heavy construction vehicles (haul trucks, crawlers, dozers), above ground and underground mining machines, agricultural equipment (combines, tractors) and other off-highway vehicles and engines that operate daily in intensely dusty environments need powerful, reliable air filtration systems to protect them and keep them running reliably.

Donaldson S Series Air Cleaners provide:

- Durable, reliable protection
- Two cleaning stages to handle very dusty conditions
- Choice of filtration efficiency, Donaldson (standard) and Donaldson Endurance™ (high efficiency) replacement filters
- Low restriction so the engine receives a high volume of air
- Sturdy, vibration-resistant, long-life construction

#### Donaclone® Tubes

The pre-cleaner of our S Series air cleaners uses clusters of Donaclone tubes positioned ahead of the primary filter. The Donaclone tube has no mechanical moving parts, so there's nothing to break down; it works automatically and properly whenever the engine is on.

Air is drawn into the tube and spun. Centrifugal force separates much of the dirt in the airstream. Dirt falls out the bottom of the tube, while the cleaned air is drawn up through the middle of the tube and into the primary filter for further cleaning. Using the pre-cleaner as a first stage of filtration results in more effective engine air filtration and longer service life for the primary filter.

#### Attention: Upgrade SRG Models to Newer Filtration Technology!

The SRG air cleaner models will be phased out over time and replaced with our new SSG air cleaners.

Upgrade your housing to an SSG style with RadialSeal™ filters for faster filter changeout.

## Designed for the Worst Dust Conditions

### New Choice for Construction and Off-Highway Applications

The SSG Air Cleaner offers design improvements over our older SRG air cleaner style.

#### Design Improvements

The SSG Air Cleaner has filters that use RadialSeal™ sealing technology, compared to axial seal style filters.

This single design improvement eliminates the need to replace filter and cover gaskets, which means less service time and fewer parts to inventory.

The large, massive mining vehicle in the picture above is an ideal match for the Donaldson SSG Air Cleaner.

Additional design improvements: the air cleaner service cover now has quick-release cover latches and a chain that connects it to the housing.

Mounting (back) side view of an SSG 20 model

Mounting (back) side view of an SSG 29 model

## Versatile SSG Provides Airflow to 4800 cfm With Improved Design Features Compared to our Older SRG Model

### Applications

- Allows 1700 to 2400 cfm airflow throughput for the SSG 20 model and 2580 to 4800 cfm airflow throughput for the SSG 29 models
- Horizontal installation
- Off-road, heavy or extreme dust conditions
- Ideal for scrapers, earth movers, graders and haul trucks

### Air Cleaner Features

- Single and dual outlet models — two high-flow models available
- Inlet has perforated holes on three sides; rain shrouds available if required
- Filters have urethane end caps with RadialSeal™ sealing technology
- Built-in pre-cleaning tubes separate up to 97% of the in-coming dust
- Latch-style cover with attached safety chain for faster and simpler filter service
- Constructed of heavy-gauge steel with a primed, ready-to-paint finish
- Same overall package size as older Donaldson SRG axial seal style housings
- Dust Dumpa tube accessory available — simplifies routine air cleaner inspections

### Filter Features

- Replacement primary filter choices: Standard life filters (for scheduled maintenance) and Donaldson Endurance™ extended service high efficiency filters for restriction maintenance practices. Air cleaners ship with the standard filters.
- Grab handles on the primary filter to help remove the loaded filter during service
- Safety filter on all models

Dust Dumpa kits installed on a Donaldson SSG29 with rain shields. Notice the piles of dust gathered on the platform during vehicle operation.

### Powerful Two-Stage Filtration

The first stage of this powerful air cleaner consists of hundreds of our exclusive, patented Donaclone™ pre-cleaner tubes. Each tube spins the incoming air to create a centrifugal force that separates up to 97% of the dust and dirt in the airstream. Donaclone™ tubes have no moving parts — so there is nothing to break down or maintain. They function properly whenever the engine is running.

The pre-cleaned dust is automatically ejected from the dust cup with a Vacuator™ Valve, which is located below the lower housing body.

The second stage of filtration is the primary filter. A safety filter, which fits inside the primary filter, is standard on all models for protection during primary filter change out.

**When Selecting an Air Cleaner . . .**

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table above. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

**SERVICE TRAINING VIDEOS**

<http://www.youtube.com/user/donaldsonengine>

Donaldson Service Training Videos are on YouTube. Scan the QR code or go to <http://www.youtube.com/user/donaldsonengine> to watch videos on how to service Donaldson Air Cleaners, like the SSG.

### 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer.

### 2 Empty the Dust Cup & Check the Vacuator™ Valve

Shut off the engine. The dust cup should be emptied when it is 2/3 full. Frequency of dust cup service varies with dust severity. On dust cups with a Vacuator™ Valve, dust cup service is minimal.

Just check the Vacuator™ Valve to see that it is not inverted, damaged or plugged. If it looks damaged or is missing, replace it immediately. When reinstalling the dust cup, be sure it seals properly 360° around the air cleaner body.

The optional Donaldson Dust Dumpa tube extension is available for the SSG.

If your SSG Air Cleaner has a dust cup with a Vacuator Valve, replace it immediately if it is inverted or looks like any of the images below.

### 3 Inspect the Donaclone™ Pre-Cleaning Tubes

Visually check the Donaclone tubes. Generally, the tubes are self-cleaning and need no service, but under unusual circumstances, plugging can occur. In those circumstances, cleaning with a stiff brush may be required.

Never clean Donaclone tubes with compressed air unless both the primary and safety filters are properly fitted in place. Do not steam-clean Donaclone tubes.

*Continued on next page*

### 4 Remove the Primary Filter and Visually Inspect the Safety Filter

When the restriction indicates that filter service is required, unfasten or unlatch the filter service cover. Because the filter fits tightly over the outlet tube there will be some initial resistance, similar to breaking the seal on a jar. Grasp the filter service handle and pull the filter out. Gently move the filter from side to side to break the seal, but avoid knocking the filter against the housing during removal.

Visually check safety filter for damage and replace if damaged, but do not remove it unless a change-out is necessary. You should replace the safety filter every three primary filter changes. Also verify that the safety filter is properly seated in the housing. If the safety filter is removed and the new filter is not to be installed immediately, be sure to cover the seal tube with a cloth or the housing cover.

Wipe the interior of the air cleaner with a clean damp cloth.

*Note: If you perform filter maintenance service on a schedule vs. using service indicators, you may want to write the service date on the filter end cap.*

*The safety filter should be replaced every three primary filter changes.*

### 5 Inspect and Install the New Filter(s)

Inspect the new filter carefully, paying attention to the inside of the open end, which is the sealing area. NEVER install a damaged filter. A new Donaldson RadialSeal™ filter may have a dry lubricant on the seal to aid installation.

If you are servicing the safety filter, make sure it is seated into position before installing the primary filter.

Insert the new filter carefully by hand, making certain it is completely seated into the air cleaner housing before securing the cover in place.

The critical sealing area will compress slightly, adjust itself and distribute the sealing pressure evenly. To complete a tight seal, apply pressure by hand at the outer rim of the filter, not at the center. (Avoid pushing on the center of the end cap.) No cover pressure is required to hold the seal.

*Note: NEVER use the service cover to push the filter into place! Using the cover to push the filter in could cause damage to the housing or cover fasteners and will void the warranty.*

If the service cover contacts the filter before it is fully in place, remove the cover and push the filter (by hand) further into the air cleaner and try again. The cover should go on with no extra force.

Once the filter is in place, secure the service cover.

## 6 Inspect Air Cleaner System

Finally, inspect and tighten all air cleaner system hoses, tubing and connections. If there are holes or damage, replace immediately. Reset filter service indicators if they don't automatically reset.

## STG Donaclone: Field Proven & Reliable Heavy-Duty Workhorse for Construction & Off-Highway Applications

Donaldson's STG Donaclone™ air cleaner has been applied to a wide variety of heavy-duty equipment around the world. Its broad application is a testament to its reliability and durability.

### Powerful Two-Stage Filtration

The first stage of this powerful air cleaner consists of a cluster of our Donaldson Donaclone™ tubes. They spin the incoming air to create a centrifugal force that separates up to 97% of the dust and dirt in the airstream. Donaclone™ tubes have no moving parts — so there is nothing to break down or maintain. They function properly whenever the engine is running.

Pre-cleaned dust falls into the dust cups and expels through Vacuator™ Valves at the bottom of the air cleaner.

The second stage of filtration is the primary filter, a cylindrical-shaped unit of specially-developed pleated filter media, designed to trap and stop dust particles, both large and small. The result is air to your engine that is up to 99.9% contaminant free!

A safety filter, which fits inside the primary filter, is standard on all models for protection during primary filter changeout. Physical orientation does not affect the proper functioning of either cleaning stage! The STG can be mounted horizontally or vertically. If mounting horizontally, the Vacuator™ Valve option on the dust cup is required.

*This STG Donaclone, mounted on a large mining machine, is protecting the engine from harmful dirt in this severe dust environment.*

**Mounting:** Sturdy mounting brackets are attached to the top section of the STG. For secure mounting, Donaldson recommends an additional mounting band for the lower body.

STG air cleaners feature a corrosion-resistant, chemical-resistant coating that provides a long-lasting, hard protective finish.

### How the Two-Stage STG Donaclone Works

Air is drawn in through the perforations in the lower part of the unit and forced down through a bank of Donaclone tubes. The Donaclone tubes spin the air so that centrifugal force causes the heavier dust particles to separate from the airstream.

While these particles fall into the cup at the bottom, the partially cleaned air is directed upward, into the primary filter in the upper portion of the unit for the second stage of filtration.

## Versatile STG Provides Airflow to 1760 cfm Choose Peripheral or Tubular Inlet, Horizontal or Vertical Mount

### Applications

- Allows 390 to 1760 cfm airflow throughput per air cleaner
- Horizontal or vertical installation
- Off-road, high dust conditions
- Ideal for scrapers, earth movers, graders

### Air Cleaner Features

- Very reliable. Only one critical filter seal.
- Airflow throughput can be doubled by using two air cleaners
- Two body styles (peripheral inlet, shown on right, and tubular inlet) to accommodate location and ducting
- Optional inlet shroud available for peripheral style
- When the air cleaner is mounted directly on the engine and there is clearance around it for airflow, choose the peripheral inlet style (shown on right)
- When the air cleaner is mounted above the cab or somewhere far from the engine to get above the dust cloud, choose the tubular inlet style, which will accept ducting into the inlet
- Built-in Donaclone pre-cleaning tubes separate up to 97% of incoming dust to the dust cup before it reaches the filter, resulting in more thorough cleaning and fewer filter changes.
- Choose the dust cup best suited to your maintenance practices. For choices see Accessories section.
- All models include a fitting for a filter service indicator

### Filter Features

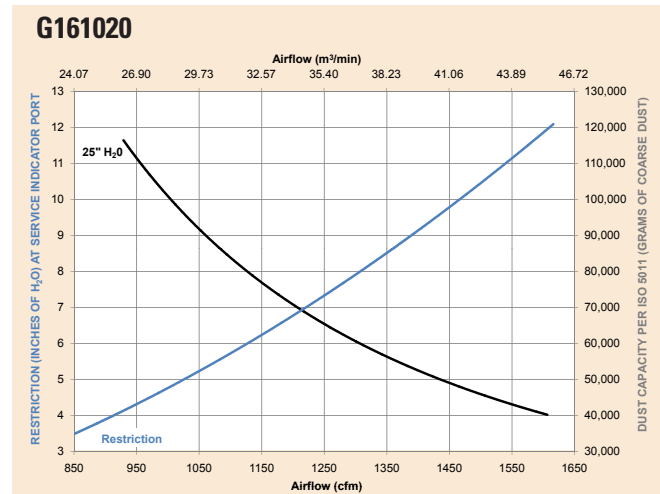

- Replacement primary filter choices: Standard life filters (for scheduled maintenance) and Donaldson Endurance™ extended service, high efficiency filters for servicing by restriction
- Uses standard airflow filters
- Safety filter on all models

### STG Air Cleaner Performance Curves (Restriction & Dust Capacity)

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table on the next page. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

**Simplify Service With Dust Dumpa Kits!**

If your current STG air cleaner has adequate clearance, one of the Dust Dumpa kits has the potential to save service time.

X006562 includes new gasket  
Length 22.55" / 5723mm  
Not for horizontal mounted air cleaners.

X006561  
Length 16.54" / 420mm

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

### 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer.

### 2 Empty the Dust Cup and Check the Vacuator™ Valves

Switch off the engine. The dust cup should be emptied when 2/3 full. Frequency of dust cup service varies with the dust severity.

On dust cups with a Vacuator Valve, dust cup service is minimal. Just check the Vacuator Valve to see that it is not inverted, damaged or plugged. If it is damaged or missing, replace it immediately.

Visually inspect gasket between dust cup and lower body — if worn or damaged, replace.

*Tip: Save Service Time — Install Dust Dumpa on Vertical STG Air Cleaners!*

If your STG Air cleaner has a dust cup with a Vacuator Valve that is inverted or looks like any of the images below replace it immediately.

### 3 Inspect the Donaclone™ Pre-Cleaning Tubes

With the dust cup removed, check the tubes. Generally, the tubes are self-cleaning and need no service, but under unusual circumstances, plugging can occur. A visual inspection is usually adequate.

If the tubes carry light dust, remove it with a stiff brush. If plugging with fibrous material is evident, remove the Strata™ or Donaclone section. Clean it with compressed air or water no hotter than 160 °F / 72 °C.

Any time the Donaclone tube lower body is removed, the body gaskets should be replaced. When reinstalling the dust cup, be sure it seals 360° around the air cleaner body.

*Never clean Donaclone tubes with compressed air unless both the primary and safety filters are installed in the air cleaner.*

*Do not steam-clean Donaclone or Strata tubes.*

## 4 Remove the Primary Filter and Visually Inspect the Safety Filter

Unlatch the service cover to access the filters.

Loosen the wing nut and remove the primary filter. The wing nut on the old filter should be held in place with a clip. Visually inspect the safety filter but do not remove the filter unless it is damaged or due for change-out.

The safety filter should be replaced every three primary filter changes.

*Note: If you perform filter maintenance service on a schedule vs. using service indicators, you may want to write the service date on the filter end cap.*

*The safety filter should be replaced every three primary filter changes.*

## 5 Always Clean the Inside of the Filter Housing

Dirt left in the air cleaner housing can be harmful for your engine. Starting with the sealing surfaces, use a clean, damp cloth to wipe the inside surfaces clean. An improper gasket seal is one of the most common causes of engine contamination, so make sure that all hardened dirt ridges are completely removed.

*Continued on next page*

### 6 Install the New Filters

The safety filter should be replaced every three primary filter changes or as denoted by the SafetySignal™ service indicator. When replacing the safety filter, install the new filter immediately or cover the inlet with a cloth so that dirt is not ingested.

Before installing the new filters, inspect them for shipping damage and gasket integrity. If a filter is damaged, do not install it. If the safety filter is being replaced, and a SafetySignal is used, secure it in place with a cotter (split) pin.

Secure the primary filter in place with the wing nut (hand tighten) using a new gasket washer. Use a new wing nut clip and reset the filter service indicator.

### 7 Inspect Air Cleaner System

Finally, inspect and tighten all air cleaner system connections. If there are holes or damage, replace immediately. Inspect all air ducting for worn spots or damage. Annual replacement of air cleaner system gaskets is recommended.

**Save Maintenance Time & Costs**  
**Convert Older SRG Housings to new SSG Housing Style!**

Replacing an older SRG housing with the new SSG housing allows you to simplify your routine filter service — no more separate gaskets at each filter change or removing a bolted on cover. SSG filters have RadialSeal™ end caps that provide a more reliable, consistent seal. Choose from an upper assembly conversion kit or you may want to install a complete new housing if your current SRG assembly needs repair or is reaching the end of its useful life.

**SRG29 Housing**

**Upper Body Conversion Kit**

G290023	X009230	G290052
G290012	X009231	G290053

\* The finish on the replacement kit upper assembly is a white, powdered-coated paint. Installation instructions are included with the kit.

**Other Changes That Can Save You Time and \$\$ After Converting to an SSG!**

**Upgrade to Donaldson Endurance™ Filters**

Donaldson Endurance, high efficiency filters are available for the SSG product line. These filters have Donaldson's advanced Ultra-Web® Filtration Technology to protect your engines from submicron and mixed contaminant.

**Install Dust Dumpa**

Dust Dumpa is a direct replacement to our dust cups. You can greatly reduce, if not eliminate, the routine step of emptying the dust cup — two models available X006561 [left] and X006562 [right].

## SRG Donaclone Protects the Largest Engines For Simpler Service, Convert Your Old SRG to an SSG Style!

**Upgrade old SRG housings two ways: upgrade kit or a new SSG air cleaner**

### Applications

- Allows 1700 to 4080 cfm airflow throughput per air cleaner — use two air cleaners to double airflow throughput
- Designed for large, high horsepower, off-road equipment
- For large engines operating in severe dust environments

### Air Cleaner Features

- Single outlet: SRG20 (1 filter)  
Dual outlet: SRG29 (2 filters)
- Very reliable. Only one critical filter seal. No moving parts.
- Built-in Donaclone™ pre-cleaning tubes separate up to 97% of incoming dust to dust cup before it reaches the filter
- SRG air cleaners are finished with a red oxide primer, ready to be painted to match your equipment
- Dust cup options:
  - Dust Cup Kit with Dust Dumpa
  - Quick-release, for manual dumping (shipped with SRG initially)
  - Vacuator™ Valve, for automatic dumping (optional replacement style)
- Vertical mounting
- Perforated inlets on all models
- Heavy metal rain shrouds available optionally
- Taps for filter service indicators on all models
- Optional Dust Dumpa to simplify dust cup maintenance.

*A huge double-unit SRG29 engine air cleaner, protects this haul truck under severely dusty operating conditions. The SRG29 has three dust cups on the bottom of the unit.*

*This SRG20 (single outlet style) with rain shroud is easy to service because the access cover, which is out front, is attached to the filter. Simply unscrew the wing nut and pull the filter out horizontally. Inside, a safety filter protects the air inlet during filter service.*

## STOP!

The SRG air cleaner models will be phased out over time and replaced with our new SSG air cleaners that have design improvements over this style.

### Upgrade from SRG housings to new SSG!

3600	4080	G290012

## When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at left. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

Part No.  
X006562

**Dust Dumpa Tube Extension**

**How it works:** When installed on the dust cups on the lower assembly, the rubber connector vibrates during normal vehicle operation and gravity expels the pre-cleaned dust.

- Improves dust evacuation from the air cleaner
- Clear tube allows for visual inspection of dust collection

- Reduces air cleaner inspection time
- Ships fully assembled
- Proper conversion requires a Dust Dumpa tube extension for every dust cup

Order X006562 if your housing has a quick release style dust cup. Order X006561 if regular dust cup.

For more information, see Accessories section.

This servicing information is provided as a best practices guide. It is not intended to replace or supersede the service instructions supplied by your engine or vehicle manufacturer.

**SERVICE TRAINING VIDEOS**

<http://www.youtube.com/user/donaldsonengine>

Donaldson Service Training Videos are on YouTube. Scan the QR code or go to <http://www.youtube.com/user/donaldsonengine> to watch videos on how to service Donaldson Air Cleaners, like the SRG.

## 1 Check the Restriction

Replace the filter only when the restriction level has reached the maximum recommended by the engine or equipment manufacturer.

## 2 Empty the Dust Cup and Check the Vacuator™ Valves

Switch off the engine. The dust cup should be emptied when 2/3 full. Frequency of dust cup service varies with dust severity.

On dust cups with a Vacuator Valve, dust cup service is minimal. Just check the Vacuator Valve to see that it is not inverted, damaged or plugged. If it is damaged or missing, replace it immediately.

Visually inspect gasket between dust cup and lower body — if worn or damaged, replace.

*Tip: Save Service Time — Install Dust Dumpa on Vertical STG Air Cleaner Installations!*

If your SRG Air Cleaner has a dust cup with a Vacuator Valve, replace it immediately if it is inverted or looks like any of the images below.

## 3 Inspect the Donaclone™ Pre-Cleaning Tubes

With the dust cup removed, check the tubes. Generally, the tubes are self-cleaning and need no service, but under unusual circumstances, plugging can occur. A visual inspection is usually adequate.

Any time the Donaclone tube lower body is removed, the body gaskets should be replaced. When reinstalling the dust cup, be sure it seals 360° around the air cleaner body.

View of Donaclone Tubes with Dust Cup removed.

If the tubes carry light dust, remove it with a stiff brush. If plugging with fibrous material is evident, remove the Strata™ or Donaclone section. Clean it with compressed air or water no hotter than 160 °F / 72 °C.

*Continued on next page*

### 4 Remove the Primary Filter and Visually Inspect the Safety Filter

Unlatch the service cover to access the filters.

Loosen the wing nut and remove the primary filter. The wing nut on the old filter should be held in place with a clip. Visually inspect the safety filter but do not remove the filter unless it is damaged or due for change-out.

### 5 Always Clean the Inside of the Filter Housing

Dirt left in the air cleaner housing can be harmful for your engine. Starting with the sealing surfaces, use a clean, damp cloth to wipe the inside surfaces clean. An improper gasket seal is one of the most common causes of engine contamination, so make sure that all hardened dirt ridges are completely removed.

Block the outlet tube of the air cleaner using a clean, dampened towel prior to proceeding with cleaning the inside of the housing to avoid contaminating the induction system.

## 6 Install the New Filters

The safety filter should be replaced every three primary filter changes or as denoted by the SafetySignal™ service indicator. When replacing the safety filter, install the new filter immediately or cover the inlet with a cloth so that dirt is not ingested.

Before installing the new filters, inspect them for shipping damage and gasket integrity. If a filter is damaged, do not install it. If the safety filter is being replaced, and a SafetySignal is used, secure it in place with a cotter (split) pin.

Secure the primary filter in place with the wing nut (hand tighten) using a new gasket washer. Use a new wing nut clip and reset the filter service indicator.

## 7 Inspect Air Cleaner System

Finally, inspect and tighten all air cleaner system connections. If there are holes or damage, replace immediately. Inspect all air ducting for worn spots or damage. Annual replacement of air cleaner system gaskets is recommended.

## The All-in-One STB Strata™ System Air Cleaner and Pre-Cleaner In One Package

### Applications

- Allows 1050 to 1400 cfm airflow throughput per air cleaner
- For severe dust conditions, usually off-road applications: crawler tractors, scrapers, loaders, large agricultural tractors
- Horizontal installation

### Air Cleaner Features

- Air cleaner and pre-cleaner in one package (exhaust ejector, scavenge hose and clamps sold separately)
- Pre-cleaned dust is ejected with the engine exhaust through an aspirated muffler or exhaust ejector
- Airflow pattern "B" air through the pre-cleaner, out the end of the air cleaner
- Perfect for:
  - turbocharged engines
  - intercooled engines
  - naturally aspirated engines
- Fitting for filter service indicator on all models
- Finished in corrosion-resistant paint
- Weight: 78 lbs. (35.4 kg)

*The STB Strata™ System protects heavy-duty engines (like this one operating in severe dust conditions) with two-stage filtration and the convenience of aspirated dust ejection.*

*Ejector muffler, hose and clamps not included with B160071 — order parts separately.*

### Filter Features

- Two replacement filter choices: standard life filter for shops that service air cleaners on scheduled maintenance (shipped with STB initially), or extended life filter for those who measure restriction to obtain full filter life
- Safety filter on all models provide continuous protection during primary filter change out

*For installation instructions on the STB system, see the Technical Reference section.*

## How the STB System Works

### When Selecting an Air Cleaner . . .

Determine the airflow requirements of your engine, then find the corresponding cfm airflow in the table at right. The restriction numbers (shown in inches of water) indicate the approximate initial restriction of each model air cleaner at that cfm. If there are two air cleaner models that fit your parameters, choosing the one with the lower restriction will provide longer filter service life. When calculating total initial restriction of the entire air intake system, include the restriction caused by ducting, elbows, and pre-cleaners.

### Initial Airflow Restriction

6"	CFM @ "H <sub>2</sub> O		Air Cleaner Model
	8"	10"	
1050	1225	1400	B160071

### Airflow Pattern "B"

Air in through the pre-cleaner, out the end of the air cleaner (lower) portion.

### Accessories Help You . . .

#### Set a Filter Service Schedule:

- Restriction indicators — go-no-go, lock-up styles, electric, in-field manometers, safety filter indicator

#### Aspirate (or scavenge) an intake system:

- Strata™ Cap
- Donaspin™
- Exhaust Ejectors
- Air Stack Extension
- Check Valve

#### Evacuate air cleaner dust:

- Vacuator™ Valves
- Quick Release Dust Cups
- Dust Dumpa
- Donaspin™
- STB Air System

#### Solve air intake water problems:

- Air Ram™ Inlet Hood
- In-line Moisture Skimmer
- In-line Moisture Separator
- Stack Top Moisture Eliminator

#### Pre-clean or protect air inlet from debris:

- Pre-cleaners
  - Strata™ Cap
  - TopSpin™ Pre-Cleaner
  - TopSpin™ HD Pre-Cleaner
  - Full-View Pre-Cleaner
  - In-line Separator
  - Donaspin™
- Air Ram™ Inlet Hood
- Inlet Hoods

#### Connect intake components:

- Rubber Elbows and Connectors
- Clamps
  - Aluminum Tubing
  - Rubber and Silicone Hump/Reducers
  - Charge Air Connectors

#### Mount or install an air cleaner:

- Mounting Bands
- Straight Pipe

## No Matter What Dust Condition, Pre-cleaners Extend Air Filter Life

Pre-cleaners remove contaminant of varying sizes from entering the intake duct, and they don't require any engine power to operate. Some devices collect the contaminant (Full-View), others just eject or drop the contaminant (TopSpin™, TopSpin™ HD, in-line separator), or are connected via a scavenge system and route debris out the exhaust system (Donaspin, Strata™ Cap).

### Product Offering

- Six pre-cleaner styles offer the broadest product range in the industry
- Strata™ Cap is the new scavenge system option for operating in heavy dust environments
- TopSpin™ HD is the new all-metal option for heavy-duty applications where a rugged and durable pre-cleaner is needed
- Pre-cleaners extend life of vehicle air filters and serve as rain caps
- Units are made of durable materials — either metal or impact resistant plastic
- Most units install outside of engine compartment — leaving more space under hood for other components (exception-in-line separator)
- No wires or power requirements
- Please note: Strata Cap and Donaspin require additional components for scavenge system — hoses, check valves, clamps and exhaust ejector

### To Scavenge or Not To Scavenge . . .

Air cleaners are designed to operate with or without aspiration. Aspiration (otherwise known as scavenging) is accomplished by introducing a secondary airflow in the intake ducting (generally through the use of an exhaust ejector or ejector muffler). This secondary airflow pulls the separated contaminant from the pre-cleaner and ejects it into the exhaust stream.

The advantages to scavenging are:

- Higher pre-cleaner efficiency (resulting in longer primary filter service life)
- Completely self-servicing (no regular maintenance needed on pre-cleaner)
- Drop tube can be located in a variety of orientations (not just straight down as is necessary on non-scavenged systems)

Aspirating an intake system through the use of a scavenging device adds more components (an ejector and some plumbing) to the overall system, but will enhance the separator efficiency of the pre-cleaner and consequently extend the primary filter service life.

### An alternative . . . Air Cleaners with Built-in Pre-Cleaning

Before you decide on adding a pre-cleaner. Take a look at our PowerCore® air cleaner housings — the PowerCore PSD Series. PowerCore air cleaners have a pre-cleaning section built directly into the housing. If you have the room, choosing a PowerCore air cleaner will reduce the number of components in your intake system — fewer parts to track, maintain and manage. And, some PSD air cleaner models can also be used in scavenged systems.

See the PowerCore PSD Series section for more information.

### Selection

Select the style that matches dust conditions, airflow and desired efficiency level. Each pre-cleaner family is presented on the following pages.

### Compare – Weight, Scavenge, Service and Materials

Additional characteristics about our pre-cleaner line to help you decide on the style that’s best for you.

Dust Condition	Max. Sepr Efficiency	Unit Weight Range lbs.	Unit Weight Range kg.	Pre-Cleaner Family	Scavenge Required	Service Required	Material
Heavy	96%	6.2 – 9.1	2.82 – 4.14	Strata™ Cap	Yes	Yes	Plastic
	90%	8.0 – 10.0	3.63 – 4.54	Donaspin™	Yes	No	Steel
Medium	85%	1.0 – 6.0	0.45 – 2.72	TopSpin™	No	No	Plastic
	80%	1.0 – 9.5	0.5 – 4.3	TopSpin™ HD	No	No	Aluminum/ Stainless Steel
	70%	11.5 – 14.8	5.23 – 6.70	In-Line Separator	No	No	Steel
	75%	0.8 – 9.2	0.37 – 4.17	Full-View	No	Yes	Steel/Plastic

## Low Profile Pre-cleaner and Rain Cap in One!

The scavenged Strata™ Cap pre-cleaner removes up to 96% of incoming contaminant — the highest efficiency compared to all other Donaldson pre-cleaners. It is designed for the most demanding heavy dust environments in the construction and mining industry.

### Features

Separates up to 96% of incoming contaminant per ISO 5011/SAE J726

- Significantly extends air filter life
- Reduces air filter servicing and replacement
- Lowers cost per operating hour
- Separates more than 99% of 20 micron and above particles

Low profile for maximum operator visibility

Robust design for heavy-duty environments

- No moving parts
- Both a rain cap and pre-cleaner
- No bowl to clean or empty
- UV resistant plastic construction

Simple installation

- Unit installs outside of engine compartment, leaving more space under hood for other components
- No wires or power requirements
- Requires additional standard components for scavenge

Lighter Weight

- Low profile
- Lighter weight compared to other Donaldson scavenge systems; e.g., STB System and Donaspin™ pre-cleaner

### Application

- Accommodates a range of airflows from 350 to 1,300 cfm (9.9-36.8 m<sup>3</sup>/min).
- Primarily used in heavy dust environments
- Great for off-road vehicles and equipment from crawler tractors to farm tractors to skid steer loaders
- Recommended mounting: outside of engine compartment on top of the air cleaner inlet stack

*The scavenged Strata™ Cap pre-cleaner removes up to 96% of incoming contaminant — the highest pre-cleaning efficiency ever invented by Donaldson.*

### Advantages of Scavenging

Scavenging is accomplished by introducing a secondary airflow to the drop tube on the air cleaner (generally through the use of an ejector or ejector muffler). This flow pulls the separated contaminant from the pre-cleaner and inserts it into the exhaust stream.

- Higher pre-cleaner efficiency (resulting in longer filter service life)
- Completely self-servicing (no regular maintenance needed on pre-cleaner)

Aspirating an intake system through the use of a scavenging device adds more components (an ejector and some plumbing) to the overall system, but will enhance the separator efficiency of the pre-cleaner and consequently extend the filter service life.

### Performance — Restriction at 10% Scavenge

## Performance – Initial Efficiency at 10% Scavenge

## Dimensional Specifications

Overall Height (A)		Body Dia. (B)		Outlet I.D. (C)		Scavenge Hose I.D. (D)		Part Number	Weight		Rated Air Flow @ 6" H <sub>2</sub> O
in	mm	in	mm	in	mm	in	mm		lbs.	kg.	
8.00	218	14.00	356	5.00	127	2.00	51	H002700	13.6	6.2	600 cfm / 17.0 m³/m
8.60	218	17.20	437	8.00	203	2.00	51	H002704	19.4	8.8	1140 cfm / 32.3 m³/m

## Installation

For proper function, the pre-cleaner/rain cap installs over a 5.0" or 8.0" OD metal intake tube and connects to a 2.0" I.D. scavenge hose. The scavenge hose should be secured from movement within 12.0" / 305mm of the pre-cleaner/rain cap.

Additional components are required for proper installation:

- Scavenge hose (2.0" / 51mm I.D.) need enough for two cut lengths connecting to the Strata™ Cap to check valve and the check valve to exhaust ejector
- Hose clamps (x 4) (Part No. P115200)
- Check Valve (Part No. H000722)
- Metal Intake Tube (O.D.) to mount Strata™ Cap to Air Cleaner (5.0" / 127 mm or 8.0" / 203 mm Dia. — depends on your Strata™ Cap size)
- Standard and expanded I.D. exhaust ejectors available

## Service Procedure

The pre-cleaner/rain cap may need to be cleaned over time. The procedure below recommends removal and disassembly of the unit to clean. The unit can be cleaned with either water, mild-soapy water or compressed air. Tapping or hitting the components to dislodge contaminant should be avoided. It may cause damage and prevent reassembly.

Cover

Upper Baffle and Gasket

Lower Baffle

Screen

6 Screws (10-24x4")  
Torque 2.3 ± 0.3-0.6 N•m

Clamp  
11.3 ± 2.0 N•m.

1. Turn off engine.
2. Loosen both connecting clamps (metal pipe and scavenge hose) and remove the Strata™ Cap pre-cleaner.
3. Turn unit upside down. Remove the screws (save for reassembly) and disassemble the unit (screen is two pieces).

*Note: Cover or plug intake pipe to protect air intake system from contamination during service.*

4. Clean all the parts to remove dust and debris from each component.
5. After cleaning, inspect the gasket on the perimeter of the upper baffle. If damaged in any way replace with new gasket. Check gasket position, make sure it is installed evenly around upper baffle perimeter.

*Note: Using the unit without gasket properly installed will affect Strata Cap pre-cleaning performance.*

## Service Parts

### Strata Cap Model No.

H002700

H002704

### Gasket

P617476

P167475

### 1/2 Screen

P617922

P617923

*Entire screen section of the Strata Cap is two pieces. The service part number is one screen only.*

6. With cover upside down, reassemble components. Unit has alignment guides to aide reassembly.
7. With all components together, reinstall and torque the 6 screws to 2.3 ± 0.3-0.6 N•m

*Note: Removable screw adhesive is to be used on the screws if original blue patch has been worn off.*

8. Replace Strata Cap on intake stack, reconnect scavenge hose. Tighten clamps to torque specifications. If scavenge support was disconnected, reconnect.

## TopSpin™ Can Extend Filter Life in Heavy Dust Conditions

Donaldson TopSpin™ will extend primary air filter life, boost system efficiency, and extend engine life.

### Features

Separates up to 85% of incoming contaminant per ISO 5011/SAE J726

- Greatly extends air filter life
- Reduces air filter usage
- Lowers cost per operating hour
- Automatically ejects mixed debris
- Separates more than 99% of 20 micron and above particles

### Self-cleaning/self-scavenging

- No maintenance to clean bowl
- No exhaust ejector required

### Easy installation

- Quick installation
- One clamp to tighten
- No wires or power requirements

### Dual mounted bearings

- More robust design
- Extends bearing life

### Lighter Weight

- Lighter than competitive pre-cleaners
- Lighter than Donaldson full-view pre-cleaner

### Application

- Engine airflows of 80 to 1500 cfm (2.3-42.5 m<sup>3</sup>/min).
- Primarily used in medium to heavy dust environments
- Great for off-road vehicles and equipment from crawler tractors to farm tractors to skid steer loaders
- Recommended mounting: on top of the air cleaner inlet stack

### Donaldson TopSpin™ in Action

**Upper left**, TopSpin on excavator; **upper right**, military ground vehicle in middle east; **left**, TopSpin on pumper truck in Australia.

### How it Works:

More than 99% of contaminant 20 micron and larger is expelled

### Performance Curves

Multiple tests conducted per ISO 5011/SAE J726 and average results are shown in charts below.

### Dimensional Specifications

Donaldson TopSpin™ can be mounted horizontally or vertically. Installation instructions, stainless clamp and warranty are included. Operating temperature range: -40 °F to 180 °F (-40 °C to 82 °C)

## All-Metal Pre-cleaner is Durable Solution for Punishing Conditions

Donaldson TopSpin™ HD will extend primary air filter life, boost system efficiency and extend engine life in medium to heavy dust environments.

### Features

Separates up to 80% of incoming contaminant per ISO 5011

- All-metal construction
- Greatly extends air filter life
- Reduces air filter usage
- Lowers cost per operating hour
- Automatically ejects mixed debris

### Self-cleaning/self-scavenging

- No maintenance to clean bowl
- No exhaust ejector required

### Easy installation

- Quick installation
- One clamp to tighten
- No wires or power requirements

### Application

- Engine airflows of 50 to 1600 cfm (1.4-45.3 m<sup>3</sup>/min).
- Primarily used in medium to heavy dust environments
- Great for off-road vehicles and equipment, including crawler tractors, farm tractors, skid steer loaders, mining, and fracking machines
- Recommended mounting: on top of the **metal** air cleaner inlet stack. Do not mount on non-metal inlet stack

## Built as tough as your equipment

Rugged one-piece **aluminum hood** with recessed discharge louver sheds flying debris.

One-piece **stainless steel impeller** is the only moving part. Dual bearings ensure reliable performance.

**Stainless steel clamp** with locking nut makes installation quick and secure. Clamp is included with each TopSpin HD.

All the interior components are solid stainless steel to resist dirt, water, heat, and debris encountered in demanding environments.

## TopSpin HD Performance Curves

## Dimensional Specifications

Donaldson TopSpin™ HD can be mounted in an upright position or horizontally with louver opening at the bottom. Installation instructions, stainless steel clamp and limited lifetime warranty are included. Operating temperature range: -40 °F to 180 °F (-40 °C to 82 °C).

Cross reference from a Full-View pre-cleaner to a TopSpin™ HD pre-cleaner can be found on the Full-view Pre-cleaner page.

\*SCFM = Standard Cubic Feet per Minute. The ISO 5011/SAE J726 test procedure was used to extract the results in the charts above. The ISO 5011/SAE J726 is a widely accepted industry test used by OEMs to evaluate the efficiency of the intake system components. Test results are an average from testing several units.

## Full-View Pre-Cleaner Helps Extend Filter Life on Agricultural & Construction Equipment

### Features

- Recommended mounting: on top of the engine intake stack
- Centrifugal force in bowl separates up to 75% of incoming dust **before** it enters the engine air intake system
- Low maintenance
- Durable, lightweight, noncorrosive construction
- Full-view plastic bowl lets operator easily see when service is needed
- One-bolt cover retention for easy service. When dirt reaches the level of the arrow, remove top nut and plastic body, then empty — no tools required
- Mounting clamp included

### Tired of Emptying the Cup?

Before you consider replacing your full-view pre-cleaner with another one, check out the TopSpin™ and TopSpin™ HD models on the previous pages.

1 - Heavy Duty Option

## Extends Filter Life in Extremely Heavy Dust Conditions

The Donaspin™ Pre-Cleaner extends the life your air filter by removing up to 90% of the dirt and contaminant before it reaches the filter and ejecting it automatically via the exhaust system.

Donaspin is designed especially for equipment operating in very heavy dust/debris environments.

### Application

- Vehicles: agricultural equipment, construction and waste haul vehicles
- For engine airflows of 305 to 800 cfm
- Recommended mounting: on top of the air inlet stack

### Features

- Built-in louvers spin air to separate up to 90% of incoming dirt and debris from the air intake system
- Works as part of a scavenged flow system to continuously expel pre-cleaned contaminants through the exhaust flow
- Durable, corrosion-resistant steel construction
- High efficiency with low restriction
- No maintenance. Self-cleaning. No moving parts.
- Mounting clamp is included

### How It Works

To create a scavenged flow system, combine the Donaspin with a Donaldson exhaust ejector and ejector check valve.

The Donaspin installed on this combine removes most of the incoming dirt, then directs the contaminant out of the system with the exhaust gases.

### Donaspin™ Pre-Cleaner

## Two-stage Cleaning for Unexpected Dust/Moisture Conditions

When your truck is being used in heavier-than-anticipated dust or moisture conditions, you may not have to replace the entire air cleaner. The problem may be solved by adding a Donaldson in-line separator.

Installing this unit on your single-stage system **creates a two-stage air filtration system**. This enables an over-highway vehicle, which usually sees only light dust, to be easily and economically adapted to off-road medium to heavy dust conditions.

### Applications

- **Vertical model:** On/off road, mounted on inlet tubing or cowl mounted directly to air cleaner
  - Compatible with engine airflows of 500 to 1500 cfm
- **Horizontal model:** On/off road, typically mounted underhood
  - Compatible with engine airflows of 100 to 1400 cfm

### Features

- 80% water removal efficiency
- 70% dust removal efficiency

### How It Works

1. When moisture — and/or dust-filled air — enters at one end, the built-in, stationary vanes cause the air to spin.
2. This spin creates centrifugal force, which pushes all moisture and dust to the outside wall where it separates from the air.
3. Moisture and dust are thrown into the Vacuator Valve tubing, then automatically released by the Vacuator Valve.
4. Clean air (acceptable for maximum filter life and engine performance) passes to the air cleaner.

Air Inlet Hood Style C offers more models that provide added rain/water protection. While all inlet hoods offer top rain/water there are some that offer additional protection from splash on the underside of the hood.

2 - Hood has rain shroud on underside of hood style.

### Inlet Hood — Style D

Fits O.D. (A)		Hood Dia. (B)		Height (C)		Add to Stack		Mat'l	Weight		Part Number

## W-Foot Mounting Bands Designed For Donaldson Air Cleaners

- Durable, corrosion-resistant, steel construction
- Fully engineered and tested to resist the adverse effects of vibration
- Mounting band feet are designed to ensure maximum torque pressure, continuously
- Air cleaners require minimum of two mounting bands per housing
- Gauge of steel increases as diameter of mounting band increases
- Bright stainless models available
- Bolt and nut included with mounting band

Most of our air cleaners with metal housings require two mounting bands.

Two models (H770068, H770037) have different foot band compared to others.

\*Bright Stainless Model

## Worm-Drive Hose Clamps

- Versatile clamps for wide size range of hose connections
- Made of strong, durable, noncorrosive stainless steel
- Inside of clamp is lined so that hose doesn't bulge through clamp holes
- Narrow band enables easy installation in confined areas

### Lined Hose Clamp

-- Min. to Max. Size -- inch	mm	Part Number
9/16 – 13/16	14–21	P532919
11/16 – 15/16	17–24	P532920
13/16 – 1-1/16	21–27	P532921
13/16 – 1-1/2	21–38	P532923
13/16 – 1-3/4	21–44	P532924
15/16 – 1-1/4	29–32	P532922
1-9/16 – 2-1/2	40–62	P115200
2-1/16 – 3	52–76	P115201
2-13/16 – 3-3/4	71–95	P143422
3-5/16 – 4-1/4	84–108	P115202
4-5/16 – 5-1/4	109–133	P115203

### Recommended application up to 40 in·lb torque

Donaldson lined hose clamps seal silicone and other soft hoses without damage. The inner liner extends under the perforations to protect the hose and prevents extrusions through the worm-gear perforations.

Initial torque on lined hose clamp should be 40 in·lb. If retorquing is required, limit to 20 in·lb.

### Constant Torque Clamp

--- Min. to Max. Size --- inch	mm	Part Number
2-1/4 – 3-1/8	57–79	P532925
2-3/4 – 3-5/8	70–92	P532926
3-1/4 – 4-1/8	83–105	P532927
3-3/4 – 4-5/8	95–117	P532928
4-1/4 – 5-1/8	108–130	P532929

### Recommended application up to 90 in·lb torque

Donaldson constant torque lined clamps are the best choice for systems where clamps cannot be retightened and have difficult access. Perfect for applications requiring higher torque, large diameters, temperature extremes, or where expansions and contractions within the system are common. This clamp is a good choice for critical coolant and charge-air connections.

### High Torque Clamp

---- Min. to Max. Size ---- inch	mm	Part Number
4-1/4 – 5-1/8	108–130	P115204
5-1/4 – 6-1/8	133–156	P115205
6-1/4 – 7-1/8	159–181	P115206
7-1/4 – 8-1/8	184–206	P115207
8-1/4 – 9-1/8	210–232	P115208
10-1/4 – 11-1/8	260–286	P115209

### Recommended application up to 150 in·lb torque

This EXTRA heavy-duty clamp ensures total protection against leakage . . . eliminates the need for double clamping.

## T-Bolt Clamps

Nominal I.D. <sup>1</sup>	Min. to Max. Size inch	mm	Part Number

<sup>1</sup> - Nominal I.D. dimension, shown in inches, corresponds to I.D. dimension of rubber part being clamped.

## Filter Service Indicators Maximize Filter Life

Typical mounting options: on the air cleaner outlet tube, on the intake duct, or remote

Replacing filters based on restriction readings can reduce your maintenance costs significantly. Visual inspection of air filters is not adequate and should not dictate service life. Filters that appear very dirty may still contain a great amount of service life.

Over-servicing and excessive handling of the filter can result in serious consequences: filter damage, improper installation, intake contamination from ambient dust, and/or increased service cost, time and material. In contrast, filter service based on restriction readings can enable you to obtain the longest life possible from the filter, and the best engine protection.

### Restriction Readings, Where & When

Restriction readings are normally taken at the air cleaner on the clean side of the air filter. If the air cleaner does not have a restriction tap, readings can be taken anywhere in the system between the air cleaner and the engine. To measure restriction of a naturally aspirated

diesel engine, the reading is taken at full-governed RPM with no load.

### Choose Restriction Measurement Tools that Best Fit Your Applications

Donaldson offers a variety of restriction measuring devices that help you get maximum filter utilization. All measure restriction in inches of water vacuum. All are resistant to vibration, breakage, weather, corrosion, dust and dirt to assure reliable filter restriction readings.

**Continuous Reading** devices that show how much life is left in the filter are:

- The Informer™
- Service Gauge for Instrument Panel

**Go/No-Go** restriction readings on heavy-duty vehicles are:

- ServiSignal™
- Visual Restriction Indicator
- Electrical Indicator
- SafetySignal™ for safety filters

**In-Field** restriction readings on light- and medium-duty vehicles are:

- In-Field Service Gauge Kit
- Water manometer

Filter service indicators are very effective when mounted *on the outlet tube of the air cleaner*, see The Informer™ above. This gives the operator constant and accurate visibility of filter life.

### Maximum Engine Manufacturers Recommended Restriction Limits

Maximum allowable restriction limits are set by the engine manufacturers. If your maximum limit is unknown, contact your engine manufacturer for the maximum limits. Maximum levels are measured at high idle with no load for naturally aspirated and super-charged diesel engines. Turbo-charged diesel, gasoline and carbureted engines are measured at full load with a wide open throttle.

Examples shown in Inches of Water (H<sub>2</sub>O) and kiloPascals

Engine Maker	Diesel, Naturally Aspirated	Diesel, Turbo Charged	Compressed Natural Gas
Detroit Diesel	25" / 6.2 kPa	20" / 5 kPa	20" / 5 kPa
Cummins	20" / 5 kPa	25" / 6.2 kPa	15" / 3.7 kPa
Caterpillar	30" / 7.5 kPa	30" / 7.5 kPa	15" / 3.7 kPa
Mack		E7: 20" / 5 kPa E9: 25" / 6.2 kPa	
Navistar		30" / 7.5 kPa	
Volvo		30" / 7.5 kPa	

NOTE: These figures are general guidelines. Restriction limits on specific engine models may vary. Consult your engine manufacturer for definite figures.

## The Informer™ for Graduated, Continuous Readings

The Informer, when mounted on the air cleaner or the dashboard, provides a continuous reading whether the engine is running or is shut down. Reset button is on top. Kit includes

full installation instructions and a P100089 safety filter fitting. For remote mounting, order a P105168 flange and a P105622 90° elbow.

### The Informer™

Restriction Limit	Gauge Only	Kit (gauge & fitting)
20" H <sub>2</sub> O/5 kPa	X002278	X002103
25" H <sub>2</sub> O/6.2 kPa	X002277	X002102
30" H <sub>2</sub> O/7.5 kPa	X002275	X002101

## The Mini-Informer™ for Light & Medium Trucks

The Mini-Informer restriction gauge is designed to mount in the plastic air cleaners of passenger cars, light trucks, and sport utility vehicles. It's an accurate, durable, easy-to-read "go/no go" style indicator, smaller than the original Informer.

Through the clear window, a green flag shows when air filter restriction is below the service point. When the restriction reaches its limits, an orange flag imprinted with "change filter" pops up.

The Mini-Informer mounts in the air cleaner ducting in a rubber grommet.

### The Mini-Informer™

Restriction Limit	Gauge & Grommet	Gauge Only
25" H <sub>2</sub> O/6.2 kPa	X007276	X007335

Hand tighten filter service indicators (30 – 40 in-lb maximum).

## ServiSignal™ Mini Indicator

Small enough to fit just about anywhere (only 1.66" high), the Donaldson ServiSignal shows a highly visible, bright red flag in the full-view window when restriction limit is reached. Resets manually via top button after air cleaner service.

Kit includes 1/8" NPT threaded brass fitting for mounting on the air cleaner. For remote mount, also order P105168 flange. Hoses not included.

### The ServiSignal™ Mini Indicator

Restriction Limit	Gauge Only	Kit (gauge & fitting)
15" H <sub>2</sub> O/ 3.7 kPa	X002250	X002350
20" H <sub>2</sub> O/ 5 kPa	X002251	X002351
25" H <sub>2</sub> O/ 6.2 kPa	X002252	X002352
30" H <sub>2</sub> O/ 7.5 kPa	X002254	X002354

## Visual Restriction Indicator

The Donaldson standard restriction indicator can be mounted directly on the air cleaner or remotely on the instrument panel or firewall. When restriction limit is reached and filter service is needed, easily-visible, bright red shows through the full-view window. After the filter is serviced, reset via rubber button on top. For remote mount, also order a flange, P105168. Hoses not included.

### Visual Restriction Indicator

Restriction Limit	Gauge Only	Kit (gauge & fitting)
15" H <sub>2</sub> O/ 3.7 kPa	X002215	X002315
20" H <sub>2</sub> O/ 5 kPa	X002220	X002320
25" H <sub>2</sub> O/ 6.2 kPa	X002225	X002325
30" H <sub>2</sub> O/ 7.5 kPa	X002230	X002330

**Hand tighten filter service indicators (30 – 40 in·lb maximum).**

## Electrical Indicator Connects to Light, Buzzer, or Computer

Our electrical indicator is designed for a variety of on- and off-highway applications within operating temperatures of -40 °F to +212 °F (-40 °C to +100 °C). When restriction level reaches the maximum recommended limit, an electrical signal activates a light, a buzzer, or a computer, as you choose. The indicator automatically resets itself after the filter is serviced.

- 12-24 Volts
- Maximum load: 6 watts (light or buzzer)
- Contacts have no polarity
- Switch contacts are normally in the open position
- Quick connectors and light, buzzer, or computer must be purchased separately

### Electrical Indicator

Restriction Limit	Electrical Indicator
15" H <sub>2</sub> O/ 3.7 kPa	X770037
20" H <sub>2</sub> O/ 5.0 kPa	X770050
25" H <sub>2</sub> O/ 6.2 kPa	X770062
30" H <sub>2</sub> O/ 7.5 kPa	X770075

## SafetySignal™ Wing Nut Indicator for Safety Filter

The Donaldson SafetySignal service indicator replaces the wing nut on the metal end cap safety filters and constantly monitors air restriction. When service is required, it locks red and can be reset after service. The SafetySignal requires no special fittings or adapters. Donaldson safety filters are designed to last through multiple primary filter change outs. The SafetySignal helps save time and money by preventing over-servicing.

### SafetySignal™

#### PART NO.: X004814

For Air Cleaners: FTG 13" & 15", FHG12" & 14", FVG16"  
Fits Bolt: 7/16" - 20 UNF  
Washer included: P111551

#### PART NO.: X004815

For Air Cleaners: FTG11  
Fits Bolt: 7/16" - 20 UNF  
Washer included: P101872

#### PART NO.: X004816

For Air Cleaners: FVG14-16", STG12-16"  
& All SRG models  
Fits Bolt: 1/2" - 13 UNC  
Washer included: P105740

### Service Gauge for Instrument Panel

Continuously reads restriction in inches of water vacuum when engine is in operation and installs conveniently on instrument panel or wherever operator can easily see the dial. Mounts into a 2-5/8" diameter hole. Hoses not included.

**Gauge Part No. X002730**  
Restriction Limit: 30" H<sub>2</sub>O / 7.5 kPa  
Kit includes nuts, mounting bracket and installation instructions.

**Gauge Part No. X002700**  
Restriction Limit: 60" H<sub>2</sub>O / 15 kPa  
Kit includes restriction tap fitting (P112257), nuts, mounting bracket and installation instructions.

### In-Field Service Gauge Kit

Equipped with three feet of vacuum hose to test the air cleaner restriction in the field. Sturdy, compact plastic case, measuring only 6" x 7.25" x 2.25", stores easily. Gauge reads in inches of water vacuum, up to 25" H<sub>2</sub>O / 6.2 kPa. Full instructions included.

**Part No. X003903**

### Water Manometer Kit

**Part No. P134534**

The Donaldson water manometer kit includes the manometer (flexible tubing), green dye, and full instructions. Manometer, range 18-0-18 in., 17-1/2 oz. mercury.

Magnets conveniently hold top and bottom ends of manometer to side of equipment or vehicle. Special shut-off valve eliminates the need to empty water after use.

### Restriction Tap Fittings

**Part No. P100089**

- Male threads both ends
- 1/8"-27 thread
- 0.44" (11mm) hex nut
- Internal sintered bronze safety filter

**Part No. P122067**

- Female threads on one end, male threads on opposite end
- 1/8"-27 thread
- Internal sintered bronze safety filter

### Restriction Indicator Fitting

**Part No. P105622**

- 1/8"-27 threads
- 90° elbow with threaded end

### Restriction Tap Sleeve

Install this sleeve in your intake system to convert from scheduled maintenance to more economical restriction maintenance practices.

### Restriction Tap Sleeves

Fits Pipe O.D.	Part Number
5" / 127mm	P521639
6" / 152mm	P521641

## 90° Rubber Elbows & Reducing/Expanding Elbows

These flexible rubber adapters and elbows have smooth radii and inside surfaces to minimize flow resistance within the air intake system. These rubber products are heavy-duty.

Larger elbows (5"/125mm) are ribbed or compounded for added strength and durability. All Donaldson rubber products meet ASTM standards.

- Resist tears, punctures and vacuum collapse
- Absorb vibration
- Reduce intake noise levels under severe conditions
- Material: EPDM rubber construction
- Temperature range: -40 °F (-40 °C) to +212 °F (+100 °C)
- Application tip: A minimum 1½" of metal piping should be inserted into the rubber fitting.

### 90° Elbows

## Silicone Charge Air Connectors Isolate Intake Piping Vibration Durable and Easy To Install

Our three styles of charge air connectors are designed to ease connections in air intake system piping. They compensate for slight misalignment and isolate vibration between hose connections. The silicone elastomer material resists chemicals, steam, ozone, and coolants that are normally found in any engine operating environment.

All three charge air connectors are for installation on the pressure side with maximum operating temperatures up to 500 °F (260 °C). They are orange to be easily identifiable and to signify that they are tolerant of high temperatures. They carry a one-year warranty.

### Connectors/Sleeves

Inner Dia.		Length		Part
in	mm	in	mm	Number
2.00	51	36.00	914	P532948
2.25	57	36.00	914	P532949

2.75	70	4.25	108	P532961
3.00	76	4.38	111	P532962

### 4-Ply Bellows

Inner Dia.		Length		No. of	Part
in	mm	in	mm	Rings	Number
3.50	89	6.00	152	3	P535572
4.00	102	6.00	152	0	P532943
		6.00	152	2	P535571
		6.00	152	3	P532944
		7.50	191	3	P532945
8.00	203	3	3	P535573	

Use the illustration as a guide for installing your charge air connector. For proper installation, use Donaldson Constant Torque clamps to retain clamp load. Torque to 70-75 in·lb.

## Vacuator™ Valves Automatically Expel Dust and Water

The Vacuator Valve, standard on the majority of Donaldson air cleaners, is an important part of the functionality of the air cleaner. It is an integral part of the pre-cleaning stage on two-stage air cleaners.

The dust cup, where pre-cleaned dust is collected, is normally under a slight vacuum when the engine is running. The normal engine pulsing of the vacuum causes the Vacuator Valve to open and close. This action automatically expels any collected dust and water. The Vacuator Valve also unloads when the engine is stopped.

The Donaldson Vacuator Valve, also known as VacValve, is made in a variety of sizes and shapes to fit various applications. The Donaldson part number is molded into each part for easy identification.

*If your air cleaner is equipped with a Donaldson Vacuator™ Valve, make sure your routine filter service includes checking it to make sure it's in good condition and not plugged. If the Vacuator Valve is plugged, clean it.*

### For the longest filter service life, replace damaged or missing Vacuator Valves immediately!

*If your valve is cracked, torn, remains open, or is missing, dust particles that are normally expelled can deposit themselves onto the filter and will shorten air filter service life. Replace it!*

The Donaldson Vacuator™ Valve can be found on the majority of Donaldson air cleaners.

## Application Notes

For proper operation, the Vacuator Valve should be located at the lowest point on the air cleaner or dust cup pointing down.

Never paint the Vacuator Valve. Solvents and chemicals will shorten the usable life.

If the Vacuator Valve is torn, shredded or turned inside out, its durometer may be too soft for the application. Choose a model with a harder durometer (higher number). Conversely, if the Vacuator Valve doesn't empty itself properly, the durometer may be too hard. Choose one with a softer durometer (lower number.)

## Vacuator™ Valves

# Dust Dumpa Tube Extension For PSD, SRG, STG & SSG Air Cleaners

## Replacement to Your Existing Dust Cup Assembly

### Application

- Donaldson SRG, SSG, STG and PowerCore® PSD Air Cleaners

### How It Works

When installed on the dust cups on the lower assembly, the rubber connector vibrates during normal vehicle operation and gravity expels the pre-cleaned dust.

### Features

- Improves dust evacuation from the air cleaner
- Clear tube allows for visual inspection of dust collection
- Improves safety of the air cleaner inspection process by eliminating the need for ladders or elevated platforms for daily inspections
- Allows operators to perform walk around inspections
- Keeps operators and maintenance personnel away from the nuisance dust normally encountered during air cleaner servicing operations.
- Improves vehicle up-time by minimizing pre/post-shift air cleaner inspections, thus facilitating increased air cleaner service intervals.
- Reduces air cleaner inspection time
- Ships fully assembled
- Proper conversion requires drop down tube for every dust cup

*If the above maintenance practice looks familiar, adding the X006561 Dust Dumpa extension to the dust cups of the air cleaner will save you maintenance time and will minimize your employees exposure to nuisance dust during service.*

**Available for SRG and SSG Air Cleaners**

Three kits are required for S Series dual outlet models. For proper performance all dust cups must have the new Dust Dumpa installed.

**Dust Dumpa applied to PSD PowerCore® Air Cleaners**

Dust Dumpa + PSD air cleaners extended the filter service life for a geothermal drill rig in Australia.

## Components For Scavenged Air Systems — Exhaust Ejectors and Check Valves

Donaldson exhaust ejectors and check valves are key components to creating a scavenged or aspirated air system. The ejector is used with Donaldson Donaspin™ or Strata™ Cap pre-cleaners, Strata™ systems, or PowerCore® PSD air cleaners.

A scavenged air system is typically used in off-highway equipment to extend air filter life. The exhaust ejector mounts as a stack at the end of exhaust system. It is recommended that the stack be covered with a curved exhaust stack or rain cap.

The redesigned ejector line offers a shorter length tube than our original standard and expanded ID offerings. With less space to work with, the new offering may work in applications where the previous models did not fit.

### ----- Basic Scavenged Air System -----

### Exhaust Ejectors

- Can be used with any pre-cleaner that has scavenge tube connection.
- Adds only 4" (102 mm) to 8" (203 mm) H<sub>2</sub>O (.3" to .6" Hg.) to exhaust backpressure
- Models all fit up to a muffler outlet tube outer diameter
- All models have a nominal OD outlet end for proper fit of stack caps and other accessories
- For proper structural support, muffler outlet tube length and stack engagement must be a minimum length of 1.5-2.0" / 38-51 mm
- Finish on all models is high temperature, black, semi-gloss finish

Standard Style

Expanded I.D. End Style

### Interested in Scavenging a PowerCore® Air Cleaner?

See PowerCore Section for specific components and parts.

## Exhaust Ejectors for Scavenged or Aspirated Air System

All exhaust ejectors are constructed of heavy-gauge, aluminized steel, and painted with a high-temperature black paint. Select the appropriate ejector by the intake airflow or exhaust flow (CFM) of your engine.

Engine Intake CFM		Exhaust CFM @ 900° F		Standard Ejectors			Expanded I.D. Ejectors			Length		Scavenge Tube O.D.

\* This dimension only applies to 2.5" /64mm of length – not the full length of the ejector.

### 3 ft. / .91 m Silicone Scavenge Hose & Lined Hose Clamp for:

- 1.25" / 32 mm Scavenge Tube: Hose: P171376 and Lined Hose Clamp P532924
- 1.50" / 38 mm Scavenge Tube: Hose: P171378 and Lined Hose Clamp P115200
- 2.00" / 51 mm Scavenge Tube: Hose: P171381 and Lined Hose Clamp P115200

## Ejector Check Valve Prevents Exhaust Backflow

The exhaust ejector check valve prevents backflow of damaging exhaust gases by way of an internal hinge flap. Add an ejector check valve when configuring the intake system to expel filtered contaminant through the exhaust system.

- Mounts horizontally (see installation diagrams)
- Durable, non-corrosive metal construction
- No servicing required

H001023

H000722

### Check Valve Installation

The illustrations are side views of two-stage air cleaners, showing the position of the check valve. A 3" (76mm) inner diameter rubber reducing elbow or hump reducer is required for installation. See pages 94 – 96 for options.

#### Installation on F Series Cyclopac™

#### Installation on S Series Donaclone™

## 3-in-1 Intake Accessory Protects Against Moisture

- Primarily over-highway trucks
- For engine airflow of 700 to 1000+ cfm
- Improves intake system airflow and fuel economy by reducing restriction. Examples:
  - at 33 mph, 53 kmh = 3.5" H<sub>2</sub>O restriction
  - at 45 – 52mph, 72 – 74 kmh = 4" H<sub>2</sub>O restriction
  - at 60 mph, 97 kmh = 5" H<sub>2</sub>O restriction
- Lightweight, non-corrosive, and durable — no service needed
- Inlet screen prevents large debris from entering intake ducting
- Side louvers ensure continuous airflow to intake system
- Common inlet sizes fit most installations
- Eliminates water from air intake system
  - at 700 cfm airflow = 90%
  - at 800 cfm airflow = 93%
  - at 1000 cfm airflow = 93%\*

\* based on item H001660

**H001654**  
High profile model mounts on inlet stack, above and behind cab.

**H001200**  
Low profile model designed for air cleaners mounted on the side of the cab.

### How Air Ram™ Works

- 1-Moisture-filled air enters Air Ram.
- 2-Air is naturally forced against rear wall. Moisture sticks to the wall, separating from the air.
- 3-Moisture collects on the Air Ram wall and drains down to and out of the drain hole.
- 4-Virtually moisture-free air passes into air cleaner.

### Air Ram Inlet Hood

Part Number	Inlet Diameter (A)		Height (B)		Depth (C)		Width (D)	
	in	mm	in	mm	in	mm	in	mm
<b>MODELS WITH LOUVERS ON SIDE</b>								
H001660	6.06	154	14.80	376	14.85	377	8.98	228
H001654	7.06	179	15.53	394	15.63	397	9.86	250
H001661	8.06	205	16.16	410	16.95	431	10.92	277
<b>MODELS WITHOUT LOUVERS (LOW PROFILE)</b>								
H001200	7.06	179	6.25	159	12.03	306	13.20	335

Note: One mounting band is included with each Air Ram

### Installation Note

All Air Ram inlet hoods MUST be installed with the screen facing forward to ensure best performance. Airflow restriction will not be reduced if the Air Ram faces sideways; but if it faces backwards, restriction does increase and adversely affects engine performance.

## Horizontal, In-Line Moisture Skimmer Removes Water

### Applications

- Allows 600 to 1200 cfm airflow
- Horizontal mount in engine air intake ducting

### Features

- Removes over 80% of water before it can reach and damage the filter
- No service needed
- Made of durable rubber
- Collected water is automatically released by Vacuator™ Valve
- Adds little or no restriction to airflow
- Common inlet sizes fit most installations

### Mounting Position

### Moisture Skimmer

Part Number	CFM	Inlet Dia. (A)		Height (B)		Depth (C)		Width (D)	
		in	mm	in	mm	in	mm	in	mm
X005822	600-1000	6.00	152	6.00	152	1.25	32	1.37	35
X005900	800-1200	7.00	178	6.00	152	1.25	32	1.37	35
X005901*	800-1200	7.00	178	6.00	152	1.25	32	1.37	35

\*Angled spout (see image on right)

## Stack-Top Moisture Eliminator Prevents Water Problems

- For cabover trucks, on/off road, mounted on top of an intake stack
- Over 80% water removal efficiency
- Includes clamp for installation

**Part No. X003691**

Airflow Range: 600-1200 cfm

I.D. 7.00" / 178mm

### How It Works

1. Moisture-filled air enters the moisture eliminator cap.
2. Built-in, stationary vanes cause the air to spin.
3. Moisture is forced to the outside wall, where it separates from the air and collects.
4. Water drains out through the drain hole.
5. As a result, drier air (acceptable for maximum filter life and engine performance) passes to the air cleaner.

# Stack Extensions, Intake Tubing & Breathers

## Air Stack Extensions

- For on-road and off-road trucks
- Helps extend filter life by elevating air inlet away from heavy dust concentrations and engine exhaust
- Installs easily and quickly with one clamp, which is included with unit
- Durable, corrosion-resistant steel construction

**Air Stack Extension**

-(A - O.D.)-		----(B)----		----(C)----		Part Number
in	mm	in	mm	in	mm	
3.75	95	29.00	737	1.50	38	X001744

8.00 203	P207369

1 - 14 gauge

## Breathers

As sealed machinery operates, its internal air heats and expands; later, this air cools and contracts. To allow hot air out and cool air in **safely**, use a Donaldson breather filter. These handy, spin-on filters use sturdy oil-wetted filter media that resists damage from vibration.

- Designed for engines, air compressors, crankcases, transmissions, gearcases, air cylinders, air presses, hydraulic reservoirs
- Mount either vertically or horizontally
- Can be cleaned and reused

The parts in this section are listed by air cleaner part number, in alpha/numeric order. If you know the model number of your air cleaner (for instance, G100398), but not the style (e.g., FRG Style B, ERA, or STG), this section will help you find service parts quickly and easily.

### Air Cleaner Service Parts Listing

Part Numbers with \* indicates old/cancelled model (only service parts are available).

Air cleaner part numbers that have an "\*" before the number are obsolete, only their service parts listed are available. If an air cleaner replacement is required and the model is no longer available, we recommend retrofitting to a newer air cleaner model. Newer air cleaner models offer improved filtration features, and replacement filters will be less expensive over time.

NOTE: You will not find our one-piece, air cleaners, like our DuraLite™ disposable series, in this section because they have no service parts.

#### FILTER DESCRIPTIONS:

ES=Extended Service HE=High Efficiency SM=Scheduled Maintenance

Donaldson provides this technical reference as a collection for those who want to gain a better understanding of air filtration for engines.

Good filtration needs to be an integral part of the system to ensure the long life and proper operation of the vehicle and engine components. Today diesel engines are very sophisticated with many precision systems working together. These systems require optimum filtration to ensure their performance.

Application Design Worksheet — Crankcase Filtration .....	249

### What is Airflow Restriction?

The resistance to the flow of air through the air cleaner system; typically measured in inches of H<sub>2</sub>O or kPa.

Restriction across the air cleaner is the difference in static pressure between the atmosphere and the outlet side of the system being measured. *Analogy: trying to pull liquid through a straw that is kinked versus one that is not. Obviously, the greater the kink, the harder it is to move liquid through.*

Air in an intake pipe acts much the same way. Any time the direction of the air is changed, there is a resulting pressure that increases the restriction of the system. While we can't totally avoid direction changes, they should be minimized.

### Include Entire Airflow System When Calculating Initial Airflow Restriction

Any intake system design should incorporate the best protection at the lowest initial restriction possible. Because each intake component contributes to the total restriction of the system, it is recommended that the position of the air cleaner be as close to the engine as possible. It is also important to minimize the elbows, bends and long runs of duct work.

Changing the direction of the intake air movement causes restriction, which causes the engine to work harder.

While this is something we like to avoid, the reality is that it cannot be avoided totally . . . but just how much is too much, and what can be done about it?

#### Conversions:

- 1" H<sub>2</sub>O = 0.0361 psi = 0.249 kPa
- 1 cfm = 0.0283 M<sup>3</sup>/minute
- 1" = 25.4 mm
- 1 lb-ft = 1.35 N•m

### The Affect of Elbows & Entrance Diameters on Air Cleaner System Restriction

Generally, the smoother the direction change, such as radiused tubes versus mitered bends, the lower the restriction. A 30° bend (figure 1) adds the least amount of restriction, while the 90° bend (figure 7) adds significantly more.

Remember that even straight pipe causes restriction and pipe with a cut-off blunt end will add much more than one with a flared inlet end. The slight flare makes a major difference in air turbulence, and consequently, in restriction.

Not only bends, but *length* of pipe is also a factor. For further details on the amount of restriction added to the system by piping and bends, see the next page.

AIR FILTRATION TECHNICAL REFERENCE

**The Goal: Minimize the number of bends AND use bends that cause the least amount of restriction**

Graphs A, B, C, D and E show the amount of restriction of different piping diameters, with various types of bends (illustrations 1 – 8 as shown on opposite page), at various airflow levels. You will notice that the smoother the direction change, such as radiused tubes versus mitered bends, the lower the restriction. A 30° bend (shown in illustration 1) adds the least amount of restriction, while the 90° bend (shown in illustration 7) adds significantly more.

You may think it odd that straight pipe (shown in illustration 8) causes the highest amount of restriction. This is because of the blunt end. Compare the restriction curve to illustration 6, which shows a flared end. The slight flare makes a major difference in air turbulence, and consequently, in restriction.

Length of pipe is also a factor, as shown in graph E. Find the line that represents your pipe diameter at the airflow level you're running to give you a restriction figure for each foot of pipe length; then multiply by the length (in feet) of your plumbing and you have the amount of restriction added by that length of pipe. (See example below graph E.)

These curves should allow you to do a quick calculation on the plumbing you are planning for your system. Add this figure to the restriction of your air cleaner (and pre-cleaner when used) to know if your system is too restrictive for the engine. Many engine manufacturers specify restriction limits for new, "clean" engine air intake systems.

**4" Diameter Piping**

**5" Diameter Piping**

**6" Diameter Piping**

**7" & 8" Diameter Piping**

**Straight Piping of Various Diameters**

**Example (Assuming a 600 cfm system with 5" piping)**

1. At 600 cfm on horizontal axis, draw a line up to the 5" diameter line.
2. Draw a line from that intersection point over to the vertical axis to find the restriction point, in this case .06 H<sub>2</sub>O.
3. Calculate: .06 x 10 feet of piping = .6" H<sub>2</sub>O. This means that the 10 feet of 5" diameter piping add .6" H<sub>2</sub>O of restriction to the engine air intake system.

### Air Filter/ Air Cleaner

Device which removes particles suspended in the airflow as it is drawn into the engine.

### Airflow Requirements

Air is critical to the operation of an engine. The amount of air required by the engine depends on the type of engine, if it has a turbocharger, and the engine horsepower (kilowatt) rating. The engine airflow requirement or specification is set by the engine manufacturer. Airflow requirements from the engine manufacturer should be requested for any changes or upgrades made to the air system.

### Axial Seal

The axial seal sealing method requires a force between the air filter and air cleaner that provides enough compression on the gasket between the parts to create the seal.

### CFM

CFM means cubic feet per minute. This is the unit of air flow measurement. An engine requires a flow of air for combustion.

### Differential Pressure

Difference in static pressure measured immediately upstream and downstream of the unit under test.

### Dust Capacity

Dust capacity is the amount of contaminant that will be collected on a filter before a specified restriction level (set by the engine manufacturer) is reached.

### Dust Concentration

Dust concentration expresses the mass of dust in a specified volume of air. Typical ambient conditions are around 0.1 milligrams per cubic meter. Off-road conditions are around 100 milligrams per cubic meter.

### Filter Media

Filter media is the material in the filter that removes the contaminant. Filter media in primary filters is made from cellulose and various combinations and blends of fibers combined with resins to keep the fibers together.

### Manometer

A manometer is a device that can be used in-field for testing of a filter's initial restriction and confirming its remaining filter life. A manometer, or clock-type gauge, can be a more accurate method of restriction measurement.

### Overall Efficiency

Overall efficiency is the percentage of dust that the air cleaner with a filter removes from intake air. Donaldson air cleaners, with a Donaldson air filter, have a 99.99+% overall efficiency.

### Primary Filter

The primary filter is the filter in the air cleaner that removes around 99.9+% of the air's dust. The air flows through the primary filter first.

### RadialSeal™ Technology

RadialSeal refers to filter sealing technology that uses the urethane end cap and the cleaner's outlet tube to create the seal. This has become the preferred method of sealing over older axial seal designs.

### Rated Air Flow

Flow rate specified by the user or manufacturer; to be the maximum airflow required by the engine.

### Restriction

Restriction represents the resistance to the flow of air through the air cleaner system. The static pressure is measured immediately downstream of the unit under test.

Typical units are inches of water ("H<sub>2</sub>O) or kilopascal (kPa). Air cleaners with clean filters should have restrictions between 6-10"H<sub>2</sub>O or 0,5 and 4 kPa

- 1 H<sub>2</sub>O = 9,80665 Pa (Pascal)
- 1000 PA = 1 kPa (kilopascal)
- 100 Pa = 1mbar (milibar)
- 10 Pa = 1 daPa (decapascal)

### Restriction Tap

This is the point on an air cleaner where a port exists to add a filter service indicator. Air filter service indicators measure air restriction and trip or engage depending on the airflow pressure on the inlet side of the housing.

### Single-Stage Air Cleaner

A single-stage air cleaner is a dust removing system for intake air with a filter and no pre-cleaner.

### Safety (Secondary) Filter

The safety (or secondary) filter is an optional filter that protects the engine during servicing of the primary filter and in case of a leak in the primary filter.

### Multi-Stage Air Cleaner

Air cleaner consisting of two or more stages, the first usually being a pre-cleaner followed by one or more filters. If two filters are employed, the first is called the primary filter and the second one is called the safety or secondary filter.

### Pre-cleaner

Device usually employing inertial or centrifugal means to remove a portion of contaminant prior to reaching the filter.

### Test Air Flow

Measure of quantity of air drawn through the air cleaner outlet per unit time. The flow rate shall be expressed in cubic meters per minute or cubic feet per minute (CFM).

## The Science of Air Filtration

### Filtration & Separation Mechanisms

Filtration and separation mechanisms are integrated into the design tools used by Donaldson personnel in the development cycle of new products.

#### Filtration Mechanisms

##### Primary

#### Separation Mechanisms

##### Primary

### Filter Media

Filtration media represents the central point of any filter design. Mastering this science is a key focus at Donaldson. While our users may not need to share this same level of understanding, some basics are always helpful. With the media representations below we hope to educate our customers on some of the more commonly used media types in this ever changing industry.

Today's engines are built to more stringent specifications and finer tolerances. Engine components require cleaner air to achieve better combustion and lower emissions. Your air intake system filter media and service practices can make the difference between engine power and engine problems.

#### Cellulose (traditional media)

Primary dry filter media is a cellulose base material and used in the majority of our air filter applications. It is used primarily in two types of engine intake systems — single- or two-stage. Applications include off-road, on-highway trucks, buses, and underground mines.

##### How it Works

##### SEM 100x

##### SEM 600x

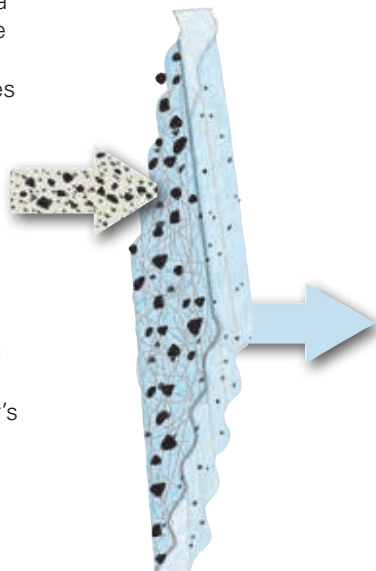

##### Media Image

#### Ultra-Web® Nanofiber Technology

Ultra-Web® filter media is composed of a cellulose or a cellulose/synthetic substrate with nanofibers applied to one side. This media provides a durable filtration solution in the high temperature and humid environments experienced by diesel, turbine, hybrid, and other powered engines.

##### How it Works

##### SEM 100x

##### SEM 600x

##### Media Image

AIR FILTRATION TECHNICAL REFERENCE

### Vibration Resistant Media

Vibration resistant filter media is a cellulose base material that offers maximum filtration protection and withstands high pulsation/vibration situations that would normally destroy other filter medias.

Applications include, but are not limited to, one, two and three cylinder engines and piston compressors.

#### How it Works

SEM 100x

SEM 600x

Media Image

### Flame Retardant, UL-approved Media

Flame retardant/UL-approved filter media is a cellulose base material specially treated for use on vehicles operating in industrial applications where sparks or flames from backfiring through the intake system create a fire hazard.

Grain elevators and warehouses are good examples of UL-approved filter media applications.

#### How it Works

SEM 100x

SEM 600x

Media Image

### Safety Filter Media

Pleated safety filter media is designed for heavy duty air cleaner systems with high velocity airflow and is used in safety filters — both single- and two-stage air cleaner systems. The safety filter protects the intake system while servicing the primary filter and in the event the primary filter is damaged.

The same media may be used for ventilation panel filters to remove dust, chaff and pollen from air entering vehicle cabs in construction, agricultural, industrial and mining applications.

#### How it Works

SEM 100x

SEM 600x

Media Image

Non-pleated safety filter media has a synthetic base. It is primarily used in light to medium duty intake system two-stage air cleaners, e.g., Donaldson F Series or Cyclopac™ type air cleaners. The safety filter protects the intake system while servicing the primary filter and in the event the primary filter is damaged.

**Filter Efficiency:** Donaldson air filters in Donaldson air cleaner housings have a 99.9+% minimum overall efficiency.

Questions often arise about the micron ratings and test procedures on air cleaners and replacement air filters. Typically, air cleaners and air filters are not assigned a “micron rating.” Micron rating is a term used in liquid filtration. Air filters are evaluated for life and efficiency using an industry-wide standard (ISO 5011). The following should clarify the questions surrounding this issue.

Filter life is measured in total grams fed or in hours of lab life and is determined by testing at a standard test dust concentration of 1 g/m<sup>3</sup> (0.028 g/ft<sup>3</sup>) for single stage air cleaners or 2 g/m<sup>3</sup> (0.056 g/ft<sup>3</sup>) for multistage units at either a constant or variable airflow. The end of the life testing is determined using the restriction method. When the predetermined restriction service point is reached, the test is stopped and the filter is weighed. The amount of test dust held by the filter is considered the capacity or life of the filter. The life of an air cleaner requires some additional consideration. Many air cleaners have inertial separators included in the housing. These inertial separators remove up to 98% of the dust that is fed during one of these tests. Therefore, the inertial separator efficiency must also be evaluated.

Filter efficiency is calculated by determining the increase in weight of an absolute filter (an absolute filter captures any dust that passes the test filter) located downstream of the test filter versus the weight of the total dust fed.

Table 1 details the particle size distribution of the standard test dust used for life and efficiency evaluations (ref. ISO 12103-1).

Table 2 lists common contaminants found in field environments, as well as their particle size ranges. Although field conditions vary from one location to the next and from time to time, this test allows for a standard means of comparison and a laboratory method of evaluating air cleaner life and efficiency.

**Table 1 — Particle Size Distribution by Weight %**

Fine test dust is used for testing primary dry air cleaners that are most often used in on-road and automotive applications, and coarse dust is used for multi-stage air cleaners that typically use inertial separators and operate in very dusty applications.

Particle Size Range (in microns)	Weight %*	
	Fine (on-road)	Coarse (off-road)
0 - 5 μ	39 %	12 %
5 - 10 μ	18 %	12 %
10 - 20 μ	16 %	14 %
20 - 40 μ	18 %	23 %
40 - 80 μ	9 %	30 %
80 - 200 μ	0%	9 %

\* Percentage of weight can vary by ±2-3 % in each particle range

**Table 2 — Common Contaminants and Micron Sizes**

## Filter Cleaning:

**Donaldson recommends servicing air filters by monitoring the airflow restriction levels in the intake system.**

**Some vehicle owners and maintenance supervisors, concerned with lowering their operating costs, will clean and reuse their heavy-duty air filters. Before you decide whether cleaning or washing of air filters is appropriate for your vehicle or fleet, please consider these factors:**

- Heavy-duty air filtration manufacturers do not recommend any type of cleaning process be used on their products. Donaldson, like other heavy duty air filter manufacturers, does not warrant the air filter once it has been cleaned.
- Filter dirt holding capacity is reduced 20 – 40% with each cleaning.
- Rather than cleaning or reusing filters, consider upgrading to an extended service filter (i.e., Donaldson Endurance™ air filters) and service the filter by restriction.
- There is a risk of dirt reaching the clean side of the filter while cleaning, plus possible filter damage from high pressure water or compressed air, making cleaning or washing a gamble. Be sure to add the potential cost or risk of filter damage to the cost of cleaning when determining the value of a filter cleaning process.
- Damaged filters should not be cleaned or reused. If a filter is damaged in service, investigate the source of damage and make corrections to avoid future damage.
- Reusing a cleaned heavy-duty filter increases the likelihood of improper air cleaner servicing because of the shortened service life. Each time the air intake system is serviced, it is exposed to the chance of contamination.
- Never attempt to clean a safety filter. Replace it after three primary filter change outs.

Reference: FMC Technical Service Bulletin 89-4R2.

## What is the Purpose of a Safety Filter?

Safety filter . . . Secondary element . . . Inner filter . . .  
Spare filter? These filters go by many names . . .

At Donaldson we prefer to call it a “safety” filter. A safety filter backs up the primary (main) filter and protects the engine while the primary filter is out of the housing during servicing. The engine should never be run with only a safety filter in place.

The safety is NOT a spare filter! Its purpose is to protect the engine if something goes wrong with the primary (main) filter. Until then, it quietly does its job.

Compared to a primary filter, the safety filter is more open for lower restriction and is less efficient. A safety filter does not increase the overall operating efficiency of an air cleaner.

A safety filter is there to protect the engine against hidden damage to a primary filter — damage from cleaning, mis-installation, a “will-fit” that doesn’t quite fit, or the installation of the wrong size filter. A safety filter is never to be used as a “spare” filter.

## Switching from a Scheduled Maintenance Air Filter to an Extended Service Filter?

Interested in switching your scheduled maintenance air filter to Donaldson Endurance™ extended service air filter?

- Use only Donaldson Endurance™ Air Filters
- Maintain accurate records of current competitive cellulose media change intervals
- Keep accurate track of miles driven with Donaldson Endurance™ air filters and maintenance records
- Provide filter for inspection
- Rely on your filter service indicator to tell you when to change out your primary filter.
- Standard Donaldson warranty terms and conditions apply

## Installation Guidelines for STB Strata System

### Positioning the Strata™ Pre-Cleaner

- It is usually best to have the pre-cleaner positioned above the hood of the vehicle so that cleaner air (above the dust cloud) can be drawn into the unit.
- The pre-cleaner section should be below the exhaust stack. Be careful NOT to mount the Strata™ pre-cleaning section in such a way that it draws in exhaust gases from the exhaust stack.

If the pre-cleaner cannot be positioned according to the above guidelines, consider adding an extension to put the intake point at a higher level.

- The extension should be added above the Strata tube section, below the inlet hood.
- Do NOT mount the Strata pre-cleaner on top of the extension as its weight would make the arrangement top heavy and unstable.

### Scavenge Hose

The scavenge line between the air cleaner and the exhaust ejector should be kept as short and as straight as possible. The ideal scavenge hose length for a Strata system is under five feet and should never be longer than 10 feet.

Minimize bends and be sure that the hose is supported properly. (Unsupported lengths of hose should not exceed five feet.) Bend radii of the hose should not be less than 15 inches. Minimize the number of 90° bends — preferably two or fewer.

Donaldson recommends three-ply silicone hose for the scavenge line. All Donaldson hose is supplied in 3-foot lengths (do not use flexible metal nor rigid tubing).

STB Model	Scavenge Outlet OD	Hose Part No	Hose ID
B160071	2.0"	P171381	2.0"

### Connecting Scavenge Hose to Pre-cleaner

A check valve is built into the Strata Pre-cleaner. Connect the scavenge hose directly to the outlet tube with a clamp. A Donaldson lined hose clamp is recommended (see Intake Accessories section).

### Connecting Hose to Ejector

When connecting the scavenge hose to the exhaust ejector, leave 2" (52 mm) between the end of the hose and the body of the ejector.

### Exhaust Ejectors

See the accessories section for details on our exhaust ejector product offering.

Do not add or create any additional back pressure downstream (e.g., at the exhaust outlet) of the Strata pre-cleaner. Doing so may cause exhaust back flow to the pre-cleaner.

Examples of what NOT to do: mount a spark arrestor on top of the ejector, or operate with a stuck or frozen rain cap on the exhaust ejector.

## How the Strata™ System Works

Note: Scavenge Hose, Exhaust Ejectors, Clamps Sold Separately

### Q: Why am I experiencing short air filter life?

A: The amount of dirt an air filter can hold before servicing depends on many variables. The environment must be considered (severe dust, soot, and moisture) as it is crucial to know how much contaminant reaches the filter. This depends on the severity of the environment and whether the air cleaner is a one- or two-stage design. Another factor is the size of the air cleaner and filter relative to the airflow requirement. How long a filter lasts is largely a function of the Original Equipment Manufacturer's intake design.  
Reference FMC TSB 89-3R3 and 06-2 for further details.

### Q: What is the micron rating of my air filter?

A: Typically, air cleaners and air filters are not assigned a "micron rating." Micron rating is a term used in liquid filtration. Air filters are evaluated for efficiency using an industry-wide standard ISO 5011. Efficiency is the percentage of contaminant that a filter removes from the intake air relative to its capacity.  
Reference FMC TSB 04-3 for further details.

### Q: What do inches or millimeters of H<sub>2</sub>O have to do with an air cleaner?

A: In an intake filtration system the resistance to airflow is called restriction. Restriction is typically measured in units called inches or millimeters of H<sub>2</sub>O vacuum, and is defined as the difference in static pressure between the atmosphere and the outlet side of the system being measured. The higher the restriction the harder an engine has to work to obtain clean air for combustion. Engine manufacturers specify a restriction level at which the air filter should be serviced.  
Reference FMC TSB 89-3R3 for further details.

### Q: Why do some air filters require U.L. approval?

A: Some engine air filters utilize flame retardant filter media to meet UL safety requirements. The U.L. rating covers fire safety and backfire resistance aspects of industrial trucks with internal-combustion engines, such as tractors, platform-lift trucks, fork-lift trucks, and other specialized vehicles for industrial use. These requirements do not cover other possible safety aspects of such equipment. Additional information can be found in UL 558 specification.

### Q: Can you judge air filter service life by visual inspection?

A: Visual inspection is not a recommended method for determining an air filter's service condition. Measuring intake system restriction is the most reliable determination of filter life. Service by restriction allows the filter to remain in service until the maximum allowable restriction limit for the application is reached. Various restriction indicating devices are available for this purpose.  
Reference FMC TSB 89-3R3 for further details.

### Q: Can I replace my axial seal filter with the new RadialSeal™ design?

A: Axial seal and RadialSeal air filters are designed to seal differently. "Radial" sealing design filters cannot be fitted into a housing design for axial sealing replacement filters without the use of a conversion kit.

Reference FMC TSB 97-3R2 for further details.

**RadialSeal™ Technology**  
RadialSeal filters slip easily on and off the outlet tube during installation and service. This design eliminated the separate gaskets used with metal endcap filters.

**Axial Seal**  
Axial seal style filter has a metal endcap with an attached gasket. This design requires housing cover pressure on a gasket to create the critical seal.

### Q: Can heavy duty air filters be cleaned or reused?

A: Most heavy duty air filter manufacturers do not recommend any type of cleaning process to be used on their products. Furthermore, they do not warrant their product once it has been cleaned.

Donaldson does not recommend cleaning filters. Cleaning a filter in any way, will void the filter warranty.  
Reference FMC TSB 89-4R2 for further details.

### Q: Will more frequent servicing of my air cleaner extend my engines life?

A: Just the opposite, over-servicing will cause increased service cost, time and material and dust contamination of the engine due to:

1. Filter damage, due to excessive handling,
2. Improper installation of filter,
3. Increased initial inefficiencies.

Reference FMCTSB 89-3R3 for further details.

### Q: What is a scavenged intake system?

A: Some intake system pre-cleaners are inertial separating devices that require a scavenge flow of air to function properly. The scavenge flow is required to expel the inertially separated dust particles from the pre-cleaner assembly. Scavenge flow is typically provided by a vacuum from an exhaust ejector that may be designed in as a function of the exhaust system muffler or as an add-on exhaust ejector stack.

Scavenged systems are typically specified on severe-duty applications to increase airflow and extend primary filter life.

### Q: What's the best type of pre-cleaner for a given application?

A: Intake system pre-cleaners are typically inertial separating devices intended to work in conjunction with the air cleaner to clean intake air prior to the final filtration stage provided by the filter. Separating some of the contamination from the intake air prior to reaching the filter provides an increase in filter service life. The type of pre-cleaner recommended for an application typically will depend on the severity of the environment. To maximize filter service life, choose the pre-cleaner design that provides the best efficiency within space and weight limits of the application.

### Q: When should I service an air filter?

A: The filter in any air cleaner should be serviced when the maximum allowable restriction, established by the engine manufacturer, has been reached. The filter should not be serviced on the basis of visual observation because this will generally lead to over-servicing.

Over-servicing will cause increased service cost, both time and material, and may cause dust contamination of the engine due to:

1. Filter damage from excessive handling,
2. Increased chance of improper installation of filter,
3. Increased initial inefficiencies.

### Achieving Maximum Air Filter Efficiency

The efficiency of an air filter increases as it is used. As soon as the air filter is put into operation, it begins to remove harmful dust particles. As these particles accumulate throughout the filter media, the microscopic openings in the media become obstructed. This on-going reduction in the size of the openings helps the filter stop increasingly finer dust particles, thus resulting in a more efficient filter. As the filter continues to plug with contamination, the restriction to air flow will increase. Most engine manufacturers establish a maximum degree of vacuum in the air induction system that the engine can tolerate and still operate efficiently.

### Measuring Restriction in Air Cleaners

As a dry air cleaner filter becomes loaded with dust, the vacuum on the "engine side" of the air cleaner (at the air cleaner outlet) increases. This vacuum is generally measured as restriction in "H<sub>2</sub>O or Kpa.

The engine manufacturer often places a maximum allowable limit on the amount of restriction the engine can withstand without loss of performance before the filter must be serviced.

Mechanical gauges, warning devices, indicators, and water manometers are available to inform the operator when the air cleaner restriction reaches this recommendation limit. These gauges and devices are generally reliable, but the water manometer is the most accurate and dependable.

To use the manometer, hold vertically and fill both legs approximately half full with water. One of the upper ends is connected to the restriction tap on the outlet side of the air cleaner by means of a flexible hose. The other end is left open to atmosphere. With the manometer held vertically and the engine drawing maximum air, the difference in the height of the water columns in the two legs — measured in inches — is the air cleaner restriction.

A restriction indicator's "lock-up" restriction level is generally marked on the indicator itself. A quick method to check a visual indicator is to remove it, wipe the base clean, then suck on the indicator with your mouth. If the indicator locks up, it is operational, if not, replace indicator. A more accurate method is to check the calibration against a water manometer.

### Q: Why Service?

A: Proper air cleaner servicing will result in maximum engine protection against the ravages of dust. Proper servicing can also save you time and money by increasing filter life and efficiency.

Two of the most common servicing problems are:

- 1) Over-servicing — new filters increase in efficiency as dust builds up on the media. DON'T BE FOOLED by filter appearance, it should look dirty. By using proper filter restriction measurement tools you will use the full life of the filter at maximum efficiency.
- 2) Improper servicing — your engine is highly vulnerable to abrasive dust contaminants during the servicing process. The most common cause of engine damage is due to careless servicing procedures. By following the steps shown in this catalog, you can avoid unnecessary dust contamination to the engine.

### Q: Why Would a Heavy-Duty Diesel Engine Air Filter Collapse

A: Most reputable filter manufacturers design their air filters to operate well beyond the recommended engine intake restriction service points. In fact, there is usually a safety factor of at least 2 – 3 times over the stated service point. However, there are circumstances when filter collapse can take place. When an engine is operating with a collapsed filter, there is a good chance that unfiltered air is getting to it, which could result in costly repairs. Most of the time poor maintenance is the cause, but there are some operating conditions to consider as well.

Collapse of a heavy-duty air filter is defined as a permanent deformation of the unit after airflow is removed. This occurs when the pressure drop across the filter exceeds the design limit of the device. Because of the safety factors built-in when the filter is engineered, this is an unusual event and is normally preventable.

A common cause of filter collapse is not paying attention to the service point recommended by the engine manufacturer. Diesel engines typically have an intake filter service point of 20-30" H<sub>2</sub>O (5-7.5 kPa), depending on the manufacturer. As stated above, exceeding this by an incremental amount won't cause the filter to collapse, as they are designed to withstand

a much higher level of restriction. However, because filters tend to load very quickly after a certain point, not servicing them soon after the maximum allowable restriction is reached (as recommended by the engine manufacturer) can end up causing a very high level of pressure drop across the filter, and may result in a collapse condition. The best way to avoid this is to install and monitor a restriction measuring device (gauge, pop-up indicator or dash light), and replace the filter when it indicates the service point has been reached.

Another possibility of filter collapse is sub-standard filter construction or remanufacture. Generally, obtaining air filters from a reputable manufacturer will avoid this issue. Quality heavy-duty air filters are made with materials that can withstand high levels of pressure drop and resist collapse, while sub-standard filters may not. It is also important to inspect all filters before installation. Dented liners or end caps may result in a loss of structural integrity and filter collapse.

Damage may be present but not very visible. If the filter shows any sign of damage, don't use it. This is especially critical when using cleaned filters. Couple the possibility of damaged filters with weakened media (if it were washed or cleaned with too high of a pressure) and the filter may have a much lower resistance to collapse. Operating conditions should be considered as well. For example, high levels of soot (generally from diesel engine exhaust) can plug an air filter rapidly, which may shorten the life of a filter dramatically. If a restriction indicating device isn't monitored closely, an extremely high pressure drop across the filter could occur, which could cause it to collapse. If high levels of soot are experienced, the cause of the ingestion should be investigated and, if possible, corrected. These include (but are not limited to) proximity of the intake to the exhaust; exhaust leaks near the air intake; vehicles operating or idling in close quarters; and operating in certain areas where exhaust concentrations are high.

Extremely high levels of water ingestion can be a concern, too. Although most filters can take a certain amount of moisture with no problems, large amounts of water can weaken and plug the filter media long enough to cause collapse. However, this is an unusual situation because most vehicles that are likely to be used in these types of conditions have a water separation device installed. One possible cause of excessive water ingestion not often accounted for is the introduction of high levels of moisture during the washing of the vehicle. The best practice is to ensure the engine is not operating during washing and water is not sprayed directly into the engine air intake.

In summary, following the engine manufacturer's service recommendations, using quality undamaged products and using a restriction indicating device are the best practices to prevent air filter collapse. If a filter collapse occurs, it is important to ascertain whether lack of maintenance caused the problem or if the vehicle is used in conditions that dramatically shorten filter life, and then take corrective action to keep it from happening again.

Off-Road Case Study  
**PowerCore® Air Cleaner**

Despite heavy concentrations of dust and soot, the Donaldson PowerCore® Air Cleaner helped keep a dozer in the field when it was most needed.

Frank Keath (right) with son Colin stand with the Fiat FD14E Dozer.

As respected members of the Country Fire Association (CFA) Frank Keath of Keaths Excavations along with sons Colin, Andrew and Graham and the company's service mechanic Andrew, were at the forefront of beating back bush fires that recently threatened properties around Eildon and neighbouring Marysville. At the height of the bushfires, Keaths Excavations deployed each of their units including three Hitachi Excavators, two Fiat Dozers, a Caterpillar Grader, a Cat Excavator and two smaller Backhoes to help build firebreaks and retainers.

Frank recalls that the conditions at the height of the fires in the Marysville area were "the most extreme conditions I have ever faced" with the air full of engine-arresting dust and soot.

"The soot was like thick layers of Talcum powder," he says.

Despite these conditions, Frank praises the recently fitted Donaldson D100031 PowerCore® Air Cleaner as helping keep his equipment in the field when it was needed the most.

Given that it can take less than half a cup of dust to destroy an engine, having an efficient air filtration system is a necessity in hot and dusty conditions. In such conditions, the engine's ability to breathe and provide optimal performance can be compromised.

In Frank's experience with the PowerCore unit, he found that the PowerCore filter lasted substantially longer than other units with which he has had experience.

"The PowerCore achieved 150 hours in the field. That may seem quite small but due to the extreme nature of the conditions and the sheer amount of smoke, dust and soot in the air, the PowerCore unit far outlasted traditional filters which struggled to provide 50 hours worth of life," says Frank.

The D100031 PowerCore air cleaner.

The Dozer at work (above and below) during the clean up of the Marysville area. The dirt and soot left in the aftermath can badly affect engine performance.

The PowerCore unit was fitted to a Fiat FD14E Dozer after consultation with Hitachi Aftermarket Parts Specialist George Calyk and Donaldson Australian Territory Manager, Tony Cooper.

Keaths Excavations fitted the unit themselves at their newly opened service workshop at Yarck. The unit was mounted vertically in the Dozer's engine housing. The Keaths Excavations team chose to install an aluminum reflector plate between the engine and the PowerCore unit to protect the unit from any radiant heat from the engine. Servicing the PowerCore unit is straightforward as the four retaining clips on top of the unit remain accessible and away from heat allowing for easy removal of the PowerCore filter.

PowerCore filters feature a patented technology that provides maximum filter efficiency with contaminant holding capacity greater than that of traditional cellulose filters. PowerCore filters are also available with Donaldson's patented nanofiber Ultra-Web® technology which provides even greater performance and protection. The performance abilities of the filter media are augmented by the design of the PowerCore unit itself which features a unique, built-in, pre-cleaning section that removes up to 98.9% of heavy contaminant before it hits the filter. This makes the PowerCore unit the perfect solution for high dust environments or environments where fine contaminant can pose a risk to engine performance.

equipment that needs to be in peak performance over extended periods.

In Frank Keath's opinion, the PowerCore unit more than did its job and he remains impressed with the performance of the unit as the clean up in the Marysville area continues. When not fighting fires, you'll find Frank, Colin, Graham, and the two Andrews of Keaths Excavations, a Hitachi Dealership, at their service centre on the Maroondah Highway, Yarck, Victoria. Keaths Excavations specialize in providing earthmoving, landscaping, construction and excavation equipment and associated services including off road vehicle maintenance for a wide range of heavy-duty equipment. The team can be contacted on (03) 5773 4242.

10" PowerCore units are available

PSD PowerCore air cleaner line was designed with the idea that most newer machinery has less available space under the engine cowling or hood than older equipment. By combining compact sizing with multiple options for mounting the unit horizontally or vertically, the PSD product offering becomes a perfect retrofit solution for

PowerCore aftermarket filters are quick to replace making service a breeze.

## Methods for Diesel Engine Air Intake and Filtration System Size Reductions

Dan Adamek, Director-Engine Air Filtration Development  
 September, 2008

### TECHNICAL BULLETIN

#### Current Situation

Innovative vehicle designs and increased environmental awareness call for new engineering solutions for on-road and off-road vehicle components. Diesel engine air intake suppliers are facing increasing challenges as vehicle manufacturers demand higher performance in a smaller volume while minimizing life-cycle costs. This paper will discuss the market drivers behind these changes, air filtration solutions that have worked in the past, and a new filter technology that promises to better meet these increasing challenges.

Many factors are affecting the changing demands on diesel engine air intake systems. One of the most prominent changes in the market is the various emissions standards being adopted around the world (Fig. 1).

These new requirements not only increase the space consumed by advanced emission components, but also impact other vehicle parameters. For example, current and future diesel engine designs are placing more emphasis on lower restrictions in the air intake system, as higher restrictions can increase the emission levels being measured in the engine exhaust.<sup>1</sup>

These air intake system pressure losses have long been considered during vehicle and component design to minimize the performance and fuel efficiency penalty that these restrictions incur. Although fuel efficiency changes due to diesel engine intake restriction changes appear small on a percentage basis (<1%<sup>11</sup>), the annual additional fuel usage with a sub-optimal air filter can easily exceed the original purchase price of the filter. With continued increases in fuel costs, efforts to squeeze additional fuel economy out of vehicles have resulted in additional time and expenses being allotted to lowering these intake losses. These fuel savings also translate into reduced CO<sub>2</sub> emissions. In addition to benefiting our environment, CO<sub>2</sub> reductions will result in additional financial benefits in regions where taxation is based on vehicles emissions.

Many manufacturers are placing more emphasis on safety, and improved visibility for the vehicle operator is one part of those efforts. This has resulted, in some cases, in the lowering of engine compartment hoods in order to improve the operators' sightlines. The effect of lowering the vehicles' engine compartment hoods has been an additional reduction in space for components such as the air intake systems.

Figure 1. Diesel Engine Emission Regulation Target Dates

AIR FILTRATION TECHNICAL REFERENCE

In the search to improve the value provided by vehicle components, air intake system life cycle costs continue to be examined. This can often take the form of either increasing the air filter's life at equal cost, or reducing the air filter cost at equivalent life. In some cases, customers are looking for ways to reconfigure the air intake system layout to reduce cost. In on-highway trucks for example, behind the cab air intake systems have been typical for some regions because of the under hood space constraints. Size reductions in the system can allow for alternate configuration such as a frontal intake system. This can shorten the ductwork thereby reducing costs and also utilize the engine compartment to mitigate noise transmission through the inlet.

These market drivers are challenging air intake system providers to deliver products that simultaneously improve multiple system properties that have historically been engineering trade-offs.

### Engineering Approach

Design of diesel engine air intake systems requires the integration of many technologies and the balancing of many factors. Figure 2 is a simple graphic illustrating how the primary value measurements of a system can be affected by design changes in other system properties.

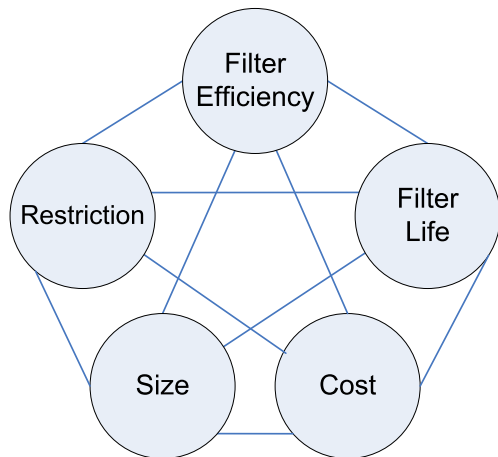

Figure 2. Air Filter Primary Design Tradeoff Relationships

At a given technology level, each property can be improved through compromises in another property. For example, size can be reduced by reducing filter efficiency, reducing filter life, or increasing filter pressure loss. Advancements in technology are required

to achieve simultaneous improvement in multiple parameters. These technology advancements can take several forms, from simply improving via design and materials expertise, to the utilization of advanced tools such as computation fluid dynamics (CFD), to the development of breakthrough configurations (Fig. 3).

Figure 3. Typical performance advancement means and rates

Other system requirements need to be addressed during the design process as well, and can include items such as noise attenuation, elevated temperature operation, chemical resistance, durability under vibration and shock, and many others.

The ability of a supplier to satisfy these diverse air intake system requirements is perhaps most determined by the design and performance of the air filter. The air filter removes contaminant from the air in order to protect the engine from damaging wear. Engine wear rates have been calculated to decrease by a factor of 10 when high efficiency air filters are used in place of standard efficiency filters.<sup>iii</sup>

High efficiency levels have been achieved through the optimization of the fibrous structure of the filter media. The use of nanofibers on the media surface (Fig. 4) has allowed the thickness and density of the media to be reduced thereby decreasing the pressure losses through the media and the amount of material used. These nanofibers also show very high initial efficiency compared to standard cellulose media which only achieves its targeted efficiency level after it has built up a sufficient dust cake on its surface.

Figure 4. Scanning Electron Microscope photograph of Donaldson's Ultra-Web® nanofiber filter technology

The build-up of contaminant on the filter media causes pressure losses to increase over time, until it reaches a magnitude which is determined to be the maximum allowable by the engine. This filter life is desired to be as long as possible to minimize the cost of filter replacement. The ability of an air filter to load slowly, that is have low pressure loss for an extended period of time, is also important because the longer an engine operates at low restriction, the lower the average fuel consumption that can be achieved.

### Product Solutions

Cylindrical filters have been the technology of choice in the past. The radial seal version of this type of filter was an advancement that occurred in the 1980's that enabled the transition from metal air cleaner housings to polymeric housings, thereby greatly reducing product costs and improving product quality.

Figure 5. Conventional filters (axial and radial seal).

A breakthrough alternative to cylindrical filters for diesel engine air intake systems was introduced in the 1990's. Donaldson's PowerCore filter demonstrates an axial flow arrangement that allows the airflow to pass straight through the filter without the 90° change in direction that is required for cylindrical filter configurations. This simplified airflow path decreases the potential pressure losses within the air intake system.

Figure 6. Schematic representation of airflow through axial flow PowerCore air filter

Figure 7. Example of an axial flow PowerCore intake system.

While axial flow style air filters have proven their value to vehicle manufactures, very recent advances in this style of filter have achieved even higher levels of performance. PowerCore G2 is an advanced, next generation axial flow filter that has optimized the internal configuration of the filter such that every geometric feature within the filter has been reconfigured to reduce pressure losses and increase filter life (Fig. 8).

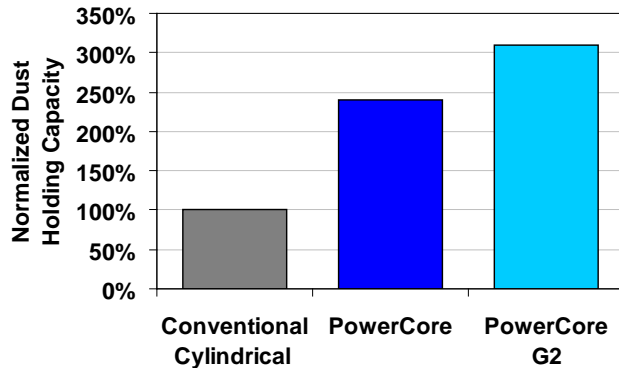

Figure 8. Normalized ISO fine dust capacity for equal sized air filters. Performance may vary with geometry and operating conditions.

One challenge in air filter design and particularly in axial style filters is the effort to minimize the media area that is unutilized or underutilized due to masking. PowerCore G2 reduces media masking when compared to previous axial flow air filters. Because increases in effective media area decrease the velocity through media, it has the dual effect of decreasing the pressure loss across the media and reducing the loading per unit area. Therefore, the increase in life is higher (Fig. 9) than the increase in effective media area.

Figure 9. Normalized effective media area as a percentage of total air filter media area. Performance may vary with geometry and operating conditions.

Additionally, PowerCore G2 has been designed to allow for increased total media area to be packaged into a filter through a unique media forming process. This can lead to increased filter life when combined with the correct filter channel configurations. (Fig. 10)

Figure 10. Normalized total media area for equal size air filters. Performance may vary with geometry and operating conditions.

Channel pressure losses can be lowered through increasing the air filter's channel size. This also decreases the amount of media, however, so the application requirements need to be factored into the choice of channel size.

Increases in channel space can also be obtained by utilizing thin filter media. Nanofiber laminates allow for thinner media because particulate efficiency increases as media fiber size decreases.

The effect of these changes and others on filtration performance has been theoretically modeled using fluid mechanics and advanced filtration theory. The use of advanced modeling tools has allowed optimal configurations to be determined by comparison of the performance of millions of unique axial flow filter configurations. Prototypes of these selected configurations have been tested and validated against the theoretical model. Figure 11 shows an example of the restriction increase versus dust loading of an advanced axial flow filter and a previously available axial flow filter.

Figure 11. Example ISO Fine Dust Loading for Equal Size Element at Constant Flow rate. Performance may vary with geometry and operating conditions.

While this example illustrates achieving improved life for a constant volume, it would be a straightforward matter to provide an air filter with equal life, but smaller volume utilizing these technology advancements. Another benefit that can be seen in Figure 11 is that PowerCore G2 can provide a lower pressure loss throughout the loading period. This lower weighted average pressure loss translates into potential increased fuel efficiency and a more desirable condition for emission performance. However, in applications where initial pressure loss is less of a concern, even greater air filter life than shown in Figure 11 may be obtained with PowerCore G2.

PowerCore G2 has been developed as a family of air filtration solutions. By varying the parameters described above, greater performance can be achieved and therefore greater value can be provided to diesel engine and vehicle manufacturers. This technology breakthrough has allowed for simultaneous improvement in multiple system properties such as restriction, size, and life, and provides a variety of configuration choices in order to best match performance to customer needs.

### Conclusion

Continued demand for further reductions in air intake system size and restriction has resulted in innovative solutions such as PowerCore G2. For given filter life and efficiency targets, the PowerCore G2 configurations can result in a 30% reduction in size from previous axial flow filters and a 60% reduction in size from cylindrical filters (Figures 12 and 13). Additionally, improvements in restriction and air filter life are now possible with PowerCore G2.

Figure 12. Relative air filter volume versus life. Performance may vary with geometry and operating conditions.

Figure 13. Photographic comparison of equivalent performance air filters of varying technology level.

# Spiracle™ Crankcase Filtration Technology

**Author:**

Veli Kalayci  
 Spiracle™ Systems Team Leader

For more than 30 years, a focus on environmental air improvement has led original equipment manufacturers (OEMs) to require their manufacturing business partners to design filtration systems that reduce the amount of crankcase blow-by aerosols vented into the atmosphere from diesel engines. This push to reduce diesel emissions and other particulate matter (PM) contaminants from the atmosphere began in the 1970s with the passing of the U.S. Environmental Protection Agency (EPA) Clean Air Act, which regulated on-road diesel emissions and was later amended, in 1990, to include regulations for off-road diesel vehicles. These standards set maximum allowable levels of emissions for new diesel engines and diesel fuel that have been incrementally reducing emissions levels since 1988.

With the significant technology advancements achieved in curbing the exhaust emissions from the engine tailpipe, the relative contribution of the emissions from the crankcase blow-by aerosols started to become an increasing contributor in total engine emissions. Figure 1 shows the increasing relative contribution of crankcase emissions for on-road engines through 2007.

**FIGURE 1**  
**EMISSIONS CONTRIBUTIONS**  
**TAILPIPE & CRANKCASE**

Crankcase emissions levels in diesel engines have remained relatively low compared to tailpipe emissions until 2006. On newer engines, as emissions from tailpipes reduce, crankcase emissions become a greater share of total allowable particulate matter (PM) emissions.

As these regulations evolved in the U.S. and around the world, Donaldson Company, a leading manufacturer of air and liquid filtration systems and replacement parts, led the industry in the development of crankcase filtration technologies with the Spiracle™ Crankcase Filtration Systems (CFS). The engineering advancements of Spiracle™ CFS have continually been used to help meet the EPA's stringent regulatory requirements by providing high efficiency filtration solutions to OEMs and fleet operators around the world.

Filtration Technology by Donaldson

### Crankcase Ventilation Filtration Systems

Crankcase ventilation filtration systems are designed to be either "open" or "closed" systems.

Open crankcase ventilation filtration systems (OCV) filter engine aerosols, including oil and soot, along with any bulk oil coming out of the valve cover or crankcase vent and discharges filtered air into the atmosphere.

In closed crankcase ventilation filtration systems (CCV), crankcase blow-by aerosols, including oil and soot, are filtered and the filtered crankcase flow is directed back to the intake manifold or to the turbo compressor. Using high efficiency closed crankcase filtration systems, the performance of intake filters, turbochargers, aftercoolers and exhaust system components can be maintained over extended engine usage.

### Crankcase Emissions from Diesel Engines and Emission Control

Crankcase emissions are created during the combustion process of reciprocating engines. The primary source of crankcase emissions are combustion gases and particulate matter (PM) that escape past the piston rings and enter the crankcase. Other sources of crankcase emissions include turbocharger shaft seal leaks, valve guides and general movement of parts. These "blow-by" gases must be vented through a tube into the atmosphere to avoid pressurizing and damaging components of the engine. After mixing with oil mists in the crankcase, the gases, PM, and oil aerosols either coalesce and drop out of the vent tube onto the ground, or enter into the atmosphere as pollutants.

Crankcase emissions vary greatly depending on a number of factors. Engine rating, displacement, engine operating conditions such as load, speed and the age of the engine all influence the blow-by volumetric flow rate, mass output rate and particle size

distribution. Just as important, the crankcase emissions can vary depending on the engine design especially the tolerances, materials, turbocharger, wear factors and operating conditions can impact the amount of blow-by escaping past the piston rings.

Donaldson has developed engine blow-by characterization methods and tools as part of its standard range of capabilities for crankcase filtration technology and product development. One such piece of equipment is a mobile blow-by characterization system that Donaldson uses to measure the blow-by output of diesel engines. The test bench can quantify the gravimetric and fractional content of the blow-by mass output, volumetric flow rate, pressure and temperature at different engine operating conditions.

**FIGURE 2**  
**CRANKCASE BLOW-BY CHARACTERIZATION AT THREE ENGINE OPERATING MODES**

**FIGURE 3**  
**PEAK ENGINE TORQUE COMPARISON WITH AND WITHOUT SPIRACLE™ FILTRATION SYSTEM**

AIR FILTRATION TECHNICAL REFERENCE

The mobile blow-by characterization system allows Donaldson to quantitatively assess their customers' crankcase emissions under dynamic conditions (Fig. 2 and Fig. 3) from their diesel engines and tailor filtration systems to address these needs. This cutting-edge technology allows Donaldson a unique capability in the industry and provides the benefit of custom designed products to fit customer needs.

It is imperative that crankcase filtration manufacturers develop products that can handle crankcase emissions that vary significantly over the operating range and life of the engine. In addition, these systems must be designed to operate in the extreme conditions for temperature, shock, and vibration – typical of medium- and heavy-duty applications.

### Spiracle™ Filtration Technology

Donaldson has a long track record of success with its Spiracle CFS technology. In an effort to meet EPA's continued mandates and realizing the health benefits to passengers<sup>(1)</sup>, school bus fleet owners have installed a Spiracle CFS combined with a second emissions reduction technology; i.e., Diesel Oxidation Catalysts (DOC), Diesel Particulate Filters (DPF) or a Diesel Multi-stage Filters (DMF). The combination creates a retrofit solution that delivers maximum emission reduction both inside and outside the bus.

Crankcase filtration manufacturers are challenged to tailor their products to meet a host of manufacturers' applications with differing size, efficiency, pressure loss, and life requirements while delivering high efficiency filtration and reliability.

With the introduction of Donaldson Synteq XP™, a revolutionary, patented filter media, Donaldson engineered the Spiracle CFS creating new open and closed crankcase filtration systems solutions.

**FIGURE 5**  
**PARTICLE SIZES AND FILTRATION PRINCIPALS**

**FIGURE 4**  
**SPIRACLE SYSTEM ON A SCHOOL BUS**

As part of California ARB and US EPA emissions retrofit programs, over 16,000 units have been installed on school buses and trucks across the U.S.

The precise dimensions, shapes and innovative fiber bonding of the Synteq XP media provide the ideal solution for the challenge of balancing high efficiency and low pressure drop, and increased filter life.

Larger particles, typically from 1 to 10 microns are efficiently separated by interception and inertial impaction. Sub-micron particles, often the most harmful for compressor blades, are efficiently separated by diffusion. Donaldson's Synteq XP media is specifically designed to combine interception, inertial impaction and diffusion, thereby offering high efficiency for all particle sizes (see Fig. 5).

After the oil mist particles are captured, they are coalesced into larger droplets and drained from the media. The drainage within the media pack is also optimized. Pressure drop across the self-draining filter is kept low and stable over time, and no engine downtime is required to drain the oil out of the media pack.

The large pore size of Synteq XP media (Fig. 6) reduces the pressure drop across the filter. Multiple layers of the media allows custom design flexibility for a wide range of filtration efficiencies and field life depending on the needs and requirements of OEMs.

**FIGURE 6**  
**SCANNING ELECTRON MICROGRAPHS OF SYNTEQ XP™ MEDIA @ 200X**

Close-up of Synteq XP media (clean)

Close-up of Synteq XP media after 1200 hours of field use. The open areas that are free of contaminant offer additional filter service life.

One of the unique features of Synteq XP filtration technology is its exceptional ability to coalesce oil and then drain.

Oil that is held in the filter will increase pressure drop and reduce efficiency, resulting in shorter filter life. In Fig. 7, there is no wet line on the Spiracle filter shown on the right after 16 hours of operation. Better drainage means less pressure drop, better efficiency and improved life.

**FIGURE 7**  
**FILTER OIL LINE COMPARISON AFTER 16 HOURS**

Better oil drainage means less pressure drop, improved efficiency and filter life.

Synteq XP media offers great flexibility to Donaldson engineers in customizing crankcase solutions. Spiracle CFS can be developed to any target gravimetric and fractional efficiency depending on the requirements of the customer and the diesel engine crankcase blow-by characteristics. This media technology offers the best combination of high efficiency with low pressure drop.

Synteq XP media in combination with a Spiracle housing for OCV or CCV applications allows increased engineering design flexibility (see Fig. 8) for custom fit solutions. This design flexibility translates into improved serviceability including mounting location and direction and aligning the filter service interval with other maintenance intervals to reduce downtime and maintenance costs.

**FIGURE 8**  
**CRANKCASE FILTRATION PERFORMANCE DESIGN FLEXIBILITY WITH SYNTEQ XP MEDIA**

### A Better Product and Technology to Control Diesel Engine Crankcase Emissions

Donaldson Spiracle CFS is a serviceable unit. Its benefits include lower cost, higher efficiency, and reliability over a wide range of engine conditions and longer filter life creating less demand on the diesel engine.

#### Benefits of Spiracle CFS with Synteq XP Media include:

- ◆ Lower operating pressure drop
- ◆ Continuous oil drainage even at low pressure differentials
- ◆ Higher gravimetric and fractional efficiency including the sub-micron particle size range
- ◆ Longer filter life compared to traditional media

Donaldson Synteq XP media provides continuous drainage at low pressure differentials. Just as importantly, a Spiracle CFS provides high gravimetric efficiency at broad flow ranges in a dynamic engine operating environment where consistency is required no matter the duty cycle of the engine. The Spiracle CFS also provides high fractional efficiency on sub-micron particles. Sub-micron particles along with larger aerosol contaminants contribute to wear and damage to the air intake system components on diesel engines. Typical manifestation of such damage is wear on compressor blades and the housing of the turbocharger system, or a reduction in aftercooler efficiency which negatively impacts engine performance. This outstanding performance of the Spiracle filtration technology over any contaminant size range including sub-micron particles, clearly sets it apart from other

methods of filtering crankcase blow-by contaminants. The technology offers the added advantage of providing optimum filtration performance in low and high temperature extremes.

The Spiracle CFS does not have any moving parts and does not require any electric or hydraulic power to function; therefore, it does not require engine power to operate, which may otherwise cause parasitic losses and decrease fuel efficiency.

**FIGURE 9**  
**SPIRACLE SYSTEM SCHEMATIC**

Due to its reliability over the life of the engine, Spiracle CFS is the ideal solution for controlling crankcase emissions whether in open or closed crankcase ventilation systems. As the soot and other contaminants build up on the Spiracle filters after extended engine use, typically over 1,500 hours, the end user simply replaces an

**SPIRACLE FILTRATION SYSTEMS ON ENGINES**

A - Outlet B - Inlet C - Oil Drain

**FIGURE 10**

**FIGURE 11**

inexpensive, easily accessible filter. This can be accomplished quickly (typically under 1 minute), thus resulting in minimal downtime servicing the engine and more vehicle uptime. Periodic replacement of the filter returns the system to a known performance level each and every time.

Donaldson Spiracle Systems deliver high performance crankcase filtration over all engine operating conditions. Figure 10 and 11 show examples of Spiracle CFS on engines.

**"Green" Benefits**

At Donaldson, we protect our customers' engines by cleaning the air going into the engine, all the fluids around and throughout the engine, and the exhaust gases coming out of the engine. In turn, our filtration systems are improving the sustainability of the environments in which they are used.

Spiracle CFS offers the following green benefits:

- ◆ reduces or eliminates crankcase emissions
- ◆ improves cabin air quality <sup>(1)</sup>
- ◆ reduces engine oil consumption; and
- ◆ maintains a cleaner engine compartment

**Conclusion**

Donaldson's diesel engine know-how combined with its cutting edge crankcase blow-by characterization technology and Synteq XP media based Spiracle Systems offer the emissions reduction solutions that are needed by the diesel engine OEMs to meet worldwide emissions regulations.

# ENGINE CRANKCASE FILTRATION APPLICATION DESIGN WORKSHEET

For proper development/design engineering solution, we ask you to provide details about your project, engine and crankcase parameters, performance (mechanical and filtration), system mounting, service, final packaging and product markings.

When completed, please forward to Donaldson.

<b>Current Donaldson Model Used: (if applicable)</b>	<b>Your Part Number:</b>
--	--------------------------

### Project Details

**Type of Machine:** \_\_\_\_\_  
**Units Per Year:** \_\_\_\_\_  
**Key Project Dates:**  
 Design Proposal: \_\_\_\_\_  
 Prototype Delivery: \_\_\_\_\_  
 Design Freeze: \_\_\_\_\_  
 PPAP: \_\_\_\_\_  
 Start of Production: \_\_\_\_\_

### Engine Information

Manufacturer \_\_\_\_\_  
 Model \_\_\_\_\_  
 Emissions regulations (U.S. EPA, Euro) being met?  
 \_\_\_\_\_  
 No of Cylinders \_\_\_\_\_  
 Engine Displacement \_\_\_\_\_ l  
 Rating \_\_\_\_\_ kW at \_\_\_\_\_ rpm  
 Number of Turbochargers \_\_\_\_\_  
 Oil Type/Grade \_\_\_\_\_  
 Height between housing oil exit to  
 oil pan \_\_\_\_\_ cm  
 Engine Tilt Requirements: Degree \_\_\_\_\_  
 Duration \_\_\_\_\_ Direction \_\_\_\_\_

### Crankcase Design Parameters

Desired Crankcase Filtration System Type:  
 Open     Closed     Not Sure  
 Desired Filter Life: \_\_\_\_\_ hours or miles  
 Minimum crankcase filtration efficiency (%) \_\_\_\_\_  
 Maximum blow-by gas flow \_\_\_\_\_ l/min  
 Blow-by gas flow difference between new engine and old  
 engine \_\_\_\_\_ l/min  
 Blow-by gas flow rate at engine brake \_\_\_\_\_ l/min  
 Maximum temperature of blow-by gas \_\_\_\_\_ °C  
 Crankcase pressure range (kPa)  
 minimum: \_\_\_\_\_ maximum: \_\_\_\_\_  
 Pressure relief valve required?     Yes     No  
 Pressure regulation valve required?     Yes     No  
 Engine oil carry-over \_\_\_\_\_ g/h  
 Check valve on oil return line     Yes     No  
 Engine Air Cleaner Restriction (kPa)  
 Initial \_\_\_\_\_ Final \_\_\_\_\_

*continued on next page*

**Mounting Requirements**

**Location / Space Footprint:**

Limitations (include inches or metric) Dia. \_\_\_\_\_

Length: \_\_\_\_\_ Inlet \_\_\_\_\_ Outlet \_\_\_\_\_

**Model of Space Envelope Attached?**  Yes  No

**Vibration**

PSD/Time History Data Attached  Yes  No

Natural Frequencies to avoid (engine fundamental, track/wheel/tire input:) \_\_\_\_\_

What is B10 life? \_\_\_\_\_ hours or miles

Machine Axis	Acceleration (g) Max. G Load	Peak Shock Loads (g)	Expected No. of Cycles-Shock
Vertical			
Fore/Aft			
Side to Side			

**Additional Information**

Do you have any special finish requirements?

Yes  No

**Accessories**

Hoses  Yes  No

Clamps  Yes  No

Filter Indicators  Yes  No

**Packaging**

**Check all that apply?**

Protective caps:  on inlet  on outlet  on port

Other \_\_\_\_\_

**Final Assembly:**

Bulk  Individual Boxes  Returnable

Other \_\_\_\_\_

**Markings**

**Do you have any marking requirements?**

Assembly?  Yes  No

Filters?  Yes  No

**Installation & Service**

Do you require installation, service or maintenance recommendations from Donaldson?  Yes  No

**Additional Comments on Requirements?**

**For Donaldson USE ONLY**

**Date Received:** \_\_\_\_\_

**Request From:**  Catalog  Web Site  
 Other \_\_\_\_\_

**Assigned to:**

Business Unit: \_\_\_\_\_

Account Manager: \_\_\_\_\_

Product Manager: \_\_\_\_\_

Engineer: \_\_\_\_\_

## Engine Air Consumption & HP Rating Guide

The data on engines in this section is to be used as a reference only. If you are selecting a new air cleaner for an engine, Donaldson recommends that you acquire this information from the engine manufacturer. If this information is not available, we calculate the airflow based on instructions shown in the first section of this catalog.

**DO NOT use this guide or data for the selection of retrofit emissions devices.**

- |                    |                      |            |
|--------------------|----------------------|------------|
| Allis Chalmers     | Kohler               | Renault    |
| Case               | Kubota               | Same       |
| Caterpillar        | Lister               | Teledyne   |
| Continental Motors | Lombardini           | Volkswagon |
| Cummins            | Mack                 | Volvo      |
| Detroit Diesel     | Mercedes-Benz        | Waukesha   |
| Deutz              | Mitsubishi           | White Eng  |
| Ford               | MTU of North America | Yanmar     |
| Hatz Diesel        | Navistar             |            |

All air cleaner housings and intake accessories featured in this catalog are listed in this section by part number in alpha/numeric order. If you have a part number (for instance, H000466), but don't know what it is, this section will tell you a brief description and the page number where the item can be found in this catalog.

Some descriptions in this section list the first two letters of the air cleaner series name. For instance, ST includes all STB and STG air cleaners; EB includes all EBA and EBB air cleaners; and so on.

If an air cleaner model directs you to the Air Cleaner Service Parts Section, you will be able to find service parts that are still available for an obsolete air cleaner model.

## Abbreviations

- A/C = Air Cleaner Assembly
- HORZ = Horizontal
- ID = Inner Diameter
- OD = Outer Diameter
- PER = Peripheral Inlet
- RS = Rain Shield
- TUB or TUBE = Tubular Inlet
- VERT = Vertical

# Hydraulic & Transmission Filtration for Mobile Equipment

Donaldson offers a complete line of hydraulic and transmission filtration solutions that will keep your equipment operating at peak performance.

Single-pass Bulk Fuel Filtration System

## Bulk Fluid & Lubricant Filtration

Donaldson offers a range of custom and standard filtration products and services specifically targeted to resolve fuel and bulk oil filtration problems, including:

- On-site surveys
- Facility upgrade options
- Condition monitoring
- Contamination control training/audit
- Installation support, commissioning and fluid management systems
- Support from a local Donaldson distributor for replacement filters and spare parts.

## Air Cleaner Selection Steps — see pages 12/13 inside for complete details.

1. Determine the combustion air requirements of the engine
2. Determine the dust condition for the engine/machine and typical operating environment
3. Select an air cleaner series
4. Choose a specific air cleaner family or series
5. Choose intake accessories

## Engine Displacement Formula

### 4-Stroke (Cycle) Engine Formula

English Units

$$\text{Airflow (CFM)} = (\text{Engine Size (CID)} \times \text{RPM}) \times \text{VE} / 3456$$

Metric Units

$$\text{Airflow (m}^3\text{/min)} = (\text{Engine Size (Liters)} \times \text{RPM}) \times \text{VE} / 2000$$

VE = Volumetric Efficiency — 4-Stroke\*

0.90 for naturally aspirated gas engine

0.90 for naturally aspirated diesel engine

1.60 for turbo charged diesel engine

1.85 for turbo charged after cooled diesel engine

### 2-Stroke (Cycle) Engine Formula

English Units

$$\text{Airflow (CFM)} = (\text{Engine Size (CID)} \times \text{RPM}) \times \text{VE} / 1728$$

Metric Units

$$\text{Airflow (m}^3\text{/min)} = (\text{Engine Size (Liters)} \times \text{RPM}) \times \text{VE} / 1000$$

VE = Volumetric Efficiency — 2-Stroke\*

0.90 for naturally aspirated diesel engine

1.40 for scavenge blower diesel engine

1.90 for turbo charged diesel engine

## Engine Horsepower Formula

English Units

$$\text{Airflow (CFM)} = \text{HP (SAE)} \times \text{SA}$$

SA = (Specific Airflow) per Horsepower

4-stroke naturally aspirated diesel engine — 2.0

4-stroke turbo charged diesel engine — 2.3

4-stroke turbo charged after cooled diesel engine - 2.3

2-stroke naturally aspirated diesel engine — 2.0

2-stroke scavenge blower diesel engine — 3.3

2-stroke turbo charged diesel engine — 3.6

Metric Units

$$\text{Airflow (m}^3\text{/min)} = \text{HP (SAE)} \times \text{SA}$$

SA = (Specific Airflow) per Horsepower

4-stroke naturally aspirated diesel engine — 0.057

4-stroke turbo charged diesel engine — 0.065

4-stroke turbo charged after cooled diesel engine — 0.065

2-stroke naturally aspirated diesel engine — 0.057

2-stroke scavenge blower diesel engine — 0.093

2-stroke turbo charged diesel engine — 0.102

## Global Presence with Local Touch

Donaldson has established a global distribution network to serve our customers locally as well as worldwide. We operate as a global company with a network of primary distribution locations that support a mature hub of regional distribution centers and warehouses.

Donaldson distribution centers are strategically located to quickly and accurately deliver filtration and exhaust products wherever replacement products are needed. We work with a network of transportation, third party logistics companies, consolidators,

and cross-docking facilities to meet or exceed our customers' requirements.

All regions of the world benefit from our global umbrella of distribution centers. We focus our efforts on local support and the capabilities of our staff. We continue to make significant investments in facilities, systems, supply chain relationships, and staffing to offer the best order fulfillment options available.
